# HTW Network Camera Version 1.21

This document describes the new and changed features of Hanwha Techwin network camera version 1.21.

 Released on NOV 2, 2018

---

## Common Features

### Improvements

- Fixed an issue where the web page menu would not change after upgrading firmware due to remained browser cache. In some case, cache refresh (F5 reload key) is required to display properly.

### Bug fixes

- Fixed an issue where the live monitoring page would be stuck on the IE11 / Windows 10 OS in case Plugin-Free profile configuration is higher than 20fps / 1920x1080 resolution. Now it will be reverted to 20fps automatically.

# Affected Products

**Table 1. Product Family Based On Version 1.21**

# HTW Network Camera Version 1.20

This document describes the new and changed features of Hanwha Techwin network camera version 1.20.

 Released on OCT 12, 2018

---

## Common Features

### New Features

- Added a function called Frame Lock to always maintain the number of frames/sec (fps) of one user selected profile when multi profiles are used
- Added a function to configure the codec of profiles 1, 2 and 3
- Added a hostname function
- Supported LLDP as a steady-state power device
- Added a function to configure overlay box for detected objects in motion detection, IVA, and face detection.
- Added a function to configure minimum/maximum object size in motion detection
- Added a function to configure minimum duration in motion detection and Intrusion detection (up to 5 secs)
- Added an audio noise reduction function under Setup – Audio Setup – Audio Setup – Audio in
- Added the USB connect/disconnect message in SNMP Trap Service
- Added a function to enable/disable USB port under the Setup – Video & Audio - Video Setup
- Added a function to configure home position and execute auto run (optical zoom cameras)
- Added queue management, heatmap, people counting (Mobile cameras)
- Added an option of new P-IRIS Tamron lens (P-IRIS supported cameras)
- Added a function to control pan/tilt, area zoom by mouse drag and control zoom by mouse

wheel scroll in web viewer (optical zoom cameras and PTZ cameras)

- Added a shock detection function (XNV-6085, XND-6085, XND-6085V, XNP-6120H, XNP-6320H)

## **Improvements**

- Improved a function to configure pan/tilt control speed (PTZ cameras)
  - Increased proportional PT mode options to 8 stages and setting is applied at 1x zoom ratio
- Changed the factory defaults values of UPnP, Bonjour, and Link-Local IPv4 address to disable
- Improved a function to configure all image parameters other than sensor mode for predefined image preset mode and added 2 UserPreset options
  - After upgrading firmware from prior to 1.2 version, the previous UserPreset configuration will be applied to UserPreset1 and all schedule configurations will be reset.
- Improved the schedule configuration
  - Expressed day of the week instead of date
  - Changed the image preset schedule configuration to same as other schedule configuration
- Improved indoor representation of WDR low and middle levels
- Changed the default value of minimum shutter speed to provide optimized value to keep framerate.
- Improved day/night switching timing (Built-in IR LED models)

## **Bug fixes**

- Fixed an issue that anti flicker configuration in UserPreset mode is not be applied after reboot
- Fixed an issue that a certain key data does not work correctly in 802.1x certificate.
- Fixed an issue that the focus does not work correctly via Pelco-D protocol (External RS-485 control supported models)
- Fixed an issue that AF operation does not work due to Gyro sensor (PTZ cameras having Gyro sensor)

---

## Security Improvements

- Removed Active-X/NPAPI plug-ins from the web viewer
- Removed the PHP module from the web viewer
- Added an SRTP function (TCP /UDP unicast)

---

## Protocol Improvements

- Added a feature to send time data whit UTC format when a user searches recorded data in SD/NAS via SUNAPI protocol
- Added an attribute that specifies the DPTZ, PTZ, and Zoom capabilities via SUNAPI protocol
- Improved ONVIF features
  - Supported motion area configuration in VideoAnalytics service
  - Supported VideoSourceModes in Media service
  - Supported UTF-8 format OSD control in Media service
  - Supported PTZ PresetTour in PTZ service
  - Supported firmware upgrade
  - Supported "tns1: VideoSource/MotionAlarm" event
- Applied the unified SNMP MIB (Keep backward compatibility, the previous MIB files can be used)
- Added the likelihood data of sound classification via metadata streaming

---

## Open Platform Version 3.50 Upgrade

- Added a function to create a profile
- Added APIs to use the SUNAPI protocol
- Added a feature to write and save system/event log data

※ Open Platform SDK should be upgraded to 3.50 version

# [Attachment 1] HTW Camera Version Management

This describes the Hanwha Techwin network camera version rule. A camera version is updated when new features are added or bugs are fixed, and there are the following two categories:

- Platform change - Version update due to changes in the software platform structure and major feature changes
- Product change - Version update to fix reported bugs and solve potential problems

---

## Camera Version Management Procedure

The firmware of Hanwha Techwin camera products are being developed based on the common platform, and this is developed across all camera product development.

Any features developed for a product firmware will be consolidated into the common platform and applied to new camera products accordingly.

---

## Camera Version Rules

The camera version is structured as below and it is generated using the following rules.

**<PlatformMajor>.<PlatformMinor><ProductMajor>.<ProductMinor>**

- Platform - Specifies the release version of the common platform
  - Major - Reflects any changes in platform structure and major feature changes.
  - Minor – Reflects upgrade with new features and consolidated changes that apply to all models.
- Product - Specifies the product release version
  - Major – Reflects the addition of major product features and changes.
  - Minor - Reflects firmware changes for minor fixes that solve reported bugs and potential problems

Each firmware release is displayed using a unique number given to each release type and is a combination of a platform version and a product version. The following examples explain the version rules.

Version 1.20.00 indicates the combination of platform version 1.2 and product version 0.00. It represents the first product that is applied with the common platform version 1.2.

Version 1.22.10 indicates the combination of platform version 1.2 and product version 2.10. It represents a product that is applied with the common platform version 1.2 and updated twice.
