IMPORTANT SAFETY INSTRUCTIONS

1. Read these instructions.
2. Keep these instructions.
3. Heed all warnings.
4. Follow all instructions.
5. Do not use this apparatus near water.
6. Clean the contaminated area on the product surface with a soft, dry cloth or a damp cloth. (Do not use a detergent or cosmetic products that contain alcohol, solvents or surfactants or oil constituents as they may deform or cause damage to the product.)
7. Do not block any ventilation openings. Install in accordance with the manufacturer’s instructions.
8. Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
9. Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
10. Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
11. Only use attachments/accessories specified by the manufacturer.
12. Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.
13. Unplug this apparatus during lighting storms or when unused for long periods of time.
14. Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.
15. This product is intended to be supplied by a Listed Power Supply Unit marked “Class 2” or “LPS” and rated from 12 Vdc, 1.8 A or PoE(42-57 Vdc), 0.6 A. (PNM-9080VQ)
16. This product is intended to be supplied by a Listed Power Supply Unit marked “Class 2” or “LPS” and rated from 12 Vdc, 2.4 A or PoE(42-57 Vdc), 0.8 A. (PNM-9081VQ)
17. Do not use DC power and HPoE injector at the same time. (PNM-9081VQ)
18. If you use excessive force when installing the product, the camera may be damaged and malfunction. If you forcibly install the product using non-compliant tools, the product may be damaged.
19. Do not install the product in a place where chemical substances or oil mist exists or may be generated. As edible oils such as soybean oil may damage or warp the product, do not install the product in the kitchen or near the kitchen table. This may cause damage to the product.
20. When installing the product, be careful not to allow the surface of the product to be stained with chemical substance. Some chemical solvents such as cleaner or adhesives may cause serious damage to the product’s surface.
21. If you install/disassemble the product in a manner that has not been recommended, the production functions/performance may not be guaranteed. Install the product by referring to "Installation & connection" in the user manual.
22. Installing or using the product in water can cause serious damage to the product.

WARNING

TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS PRODUCT TO RAIN OR MOISTURE. DO NOT INSERT ANY METALLIC OBJECT THROUGH THE VENTILATION GRILLS OR OTHER OPENINGS ON THE EQUIPMENT.

Apparatus shall not be exposed to dripping or splashing and that no objects filled with liquids, such as vases, shall be placed on the apparatus.

To prevent injury, this apparatus must be securely attached to the Wall/ceiling in accordance with the installation instructions.

CAUTION

EXPLANATION OF GRAPHICAL SYMBOLS

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of "dangerous voltage" within the product’s enclosure that may of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the product.
**Class I construction**  
An apparatus with CLASS I construction shall be connected to a MAINS socket outlet with a protective earthing connection.

**Battery**  
Batteries (battery pack or batteries installed) shall not be exposed to excessive heat such as sunshine, fire or the like.

**Disconnection Device**  
Disconnect the main plug from the apparatus, if it’s defected. And please call a repair man in your location.

When used outside of the U.S., it may be used HAR code with fittings of an approved agency is employed.

**CAUTION**  
Risk of explosion if battery is replaced by an incorrect type.  
Dispose of used batteries according to the instructions.

These servicing instructions are for use by qualified service personnel only.  
To reduce the risk of electric shock do not perform any servicing other than that contained in the operating instructions unless you are qualified to do so.

The CVBS out terminal of the product is provided for easier installation, and is not recommended for monitoring purposes.

Please use the input power with just one camera and other devices must not be connected.

The ITE is to be connected only to PoE networks without routing to the outside plant.

---

Please read the following recommended safety precautions carefully.

- Do not place this apparatus on an uneven surface.
- Do not install on a surface where it is exposed to direct sunlight, near heating equipment or heavy cold area.
- Do not place this apparatus near conductive material.
- Do not attempt to service this apparatus yourself.
- Do not place a glass of water on the product.
- Do not install near any magnetic sources.
- Do not block any ventilation openings.
- Do not place heavy items on the product.
- Please wear protective gloves when installing/removing the camera.  
The high temperature of the product surface may cause a burn.

User’s Manual is a guidance book for how to use the products.

The meaning of the symbols are shown below.

- **Reference**: In case of providing information for helping of product’s usages
- **Notice**: If there’s any possibility to occur any damages for the goods and human caused by not following the instruction

※ Please read this manual for the safety before using of goods and keep it in the safe place.

PRODUCT FEATURES

• 4 cameras
  The 4 camera lenses show different directions.

• Dustproof/Waterproof (IP66)
  The dustproof and waterproof design makes you feel at ease when installing the product outdoors or exposing it to rain.

• 4K video supported

• Multi-Streaming
  This network camera can display videos in different resolutions and qualities simultaneously using different CODECs.

• Web Browser-based Monitoring
  Using the Internet web browser to display the image in a local network environment.

• Alarm
  When an event occurs, related images are sent to the user’s registered e-mail and FTP server, stored on the micro SD memory card, or signaled to the alarm output terminal.

• Tampering Detection
  Detects tempering attempts on video monitoring.

• Defocus detection function
  Detects the defocus phenomenon of the camera lens.

• Motion Detection
  Detects motion from the camera’s video input.

• IVA (Intelligent Video Analysis) function
  Detects a motion or situation that meets the configured event rules.

• Smart Codec
  Adaptively applies codecs for a portion of the camera’s field of view to improve the quality of such area specified by user.

• Auto Detection of Disconnected Network
  Detects network disconnection before triggering an event.

• ONVIF Compliance
  This product supports ONVIF Profile S.
  For more information, refer to www.onvif.org.

RECOMMENDED PC SPECIFICATIONS

• CPU : Intel(R) Core(TM) i7 3.4 GHz or higher
• Supported OS : Windows 7, 8.1, 10, Mac OS X 10.9, 10.10, 10.11, 10.12
• Plug-in free web viewer
  Supported web browsers : Google Chrome 54, MS Edge 38, Mozilla Firefox 49 (Windows 64bit only), Apple Safari 9 (Mac OS X only)
• Plug-in Webviewer
  Supported web browsers : MS Explore 11, Mozilla Firefox 43, Apple Safari 9 * Mac OS X only
• VGA : To play a 4K (4096 x 2160) resolution video at 30fps, a GPU that supports 4096 x 2160 resolution and 4K/H.264 decoding is required

RECOMMENDED MICRO SD/SDHC/SDXC MEMORY CARD SPECIFICATIONS

• Recommended capacity : 16GB to 256GB (MLC type)
• The following types of memory cards from the following manufacturers are recommended for this camera.
  - Manufacturer : SanDisk, Transcend
  - Product family : High endurance
• It is recommended to use a memory card of 16GB or more that conforms to the UHS-3 class (MLC type) specification.
WHAT’S INCLUDED
Please check if your camera and accessories are all included in the product package. (As for each sales country, accessories are not the same.)

**INSTALLATION**

- This camera is waterproof and in compliance with the IP66 spec, but the jack connected to the external cable is not. You are recommended to install this product below the edge of eaves to prevent the cable from being externally exposed.

**Precautions before installation**

Ensure you read out the following instructions before installing the camera:

- It must be installed on the area (ceiling or wall) that can withstand 5 times the weight of the camera including the installation bracket.
- Stuck-in or peeled-off cables can cause damage to the product or a fire.
- For safety purposes, keep anyone else away from the installation site. And put aside personal belongings from the site, just in case.
- If you use excessive force when installing the product, the camera may be damaged and malfunction.
- If you forcibly install the product using non-compliant tools, the product may be damaged.
- If the shield cover is not used, diffuse reflection may occur.

**Disassembling**

1. Remove the dome cover by loosening the fastening bolt of the dome cover. This can be done by turning it counterclockwise using the Allen key or drill bit provided.

2. Loosen the fastening screw on the camera body.
3. Remove the camera body and mounting plate by pulling the plate spring, as shown in the figure.

**Attaching to the unbundled adapter**

Choose and purchase a necessary one of the following options (unbundled) that is suitable to the installation site or for your convenience.

1. Connect the mounting plate and the hanging mount.
   - The hanging mount is sold separately.
2. Install the hanging mount.
3. Connect the safety cable.
4. Insert the camera body into the mount plate.
   - Fit it to the hinge as shown in the figure.
5. Connect the necessary cable to the terminal inside the camera.
6. Push in the pin spring.
# Installation & Connection

## How to install using the perpendicular falling method

You can move the CH2 lens only to view the video by installing it in the perpendicular falling method.

In this case, the CH2 lens can tilt up to 90 degrees only.

1. Remove the shield cover from the CH2 lens.
   - As shown in the picture, put your fingers into the rear of the hood, and open and lift it in order to disassemble it easily.

2. Manually dismount the CH2 lens.

3. Align the groove with the center of the rotating part.

4. Adjust the lens to the desired direction by referring to "Adjusting the monitoring direction for the camera". (Page 13)
   - If you tilt the lens, you may need to adjust the lens as this may block the screen.

5. Assemble the dome cover.
   - Align the arrows when assembling the dome cover.
   - To ensure there are no issues with waterproofing, tighten the fastening bolts tightly using the Allen key or drill bit.

## How to install using the tilting method

You can move the lenses of CH1 - CH4 along the bottom rail to view videos by installing them using the tilting method.

In this case, the orientation of the lens cannot be tilted by 90 degrees.

1. If you want to install a vertical-type lens to tilt-type, you have to tilt the lens that is in the vertical direction before detaching it from the center of the rotating part to enable easy removal.

2. Adjust the lens to the desired direction by referring to "Adjusting the monitoring direction for the camera". (Page 13)
   - If you tilt the lens, you may need to adjust the lens as this may block the screen.

3. Assemble the dome cover.
   - Align the arrows when assembling the dome cover.
   - To ensure there are no issues with waterproofing, tighten the fastening bolts tightly using the Allen key or drill bit.

## Connecting waterproof power cable and LAN cable

1. Remove the dome cover and the case.

2. Pull out the long projected part of the rubber plug on the bottom and remove it as shown in the figure.

   - Use an appropriate cable bush for the LAN cable to be connected.
     - Basic camera: Use the cable with a diameter of Ø5~6.5.
     - Components provided: Use the cable with a diameter of Ø7~8.5.
3. Insert the power cable into the small hole made by removing the projected part of the rubber plug in step 2 above, and lay the cable along the long groove.

4. Connect the power cable with the power terminal block.
5. Insert the LAN cable into the large hole made by removing the projected part of the rubber plug in step 2 above.
6. Remove the sheath with a cable cutter, and align the cables.
7. Connect the LAN cable with a LAN connector, and insert it into the LAN tool.
8. Connect the finished cable to the Ethernet port.

Connecting the alarm cable
1. Remove the dome cover and the case.
2. Pull out the rubber plug on the bottom as shown in the figure.
3. Insert the alarm cable through the hole created by removing the rubber cap in No. 2, and connect the cable to the alarm terminal.
4. Align the cable so that it should not be damaged or jammed when installing the camera.
5. Put the rubber cap located on the alarm cable in the hole.
6. Adjust the lens in a desired direction by referring to the “Adjusting the monitoring direction for the camera” section. (page 13)
7. Attach the dome cover.

How to set up channels to monitor for installation
The camera body has a channel DIP switch, as shown in the figure.
You can change the channel of the camera using the channel DIP switches.

<table>

</tbody>
</table>

- If a DIP switch is not fully On/Off, the product may malfunction. After installation, check the DIP switches at the back.
- Be careful, as you will risk damaging a DIP switch if you manipulate it using a sharp tool.
- Be careful, as a DIP switch may be damaged if you operate it with excessive force.

Outdoor installation
When you install it outside of the building, please waterproof it with waterproof butyl rubber tape (can be purchased in stores) so that water does not leak from the gap of the cable connected to the outside.

1. Connect the power, BNC, and LAN cables.
2. Wrap the black cable jacket (Area A) and the cable connection area with waterproof (butyl rubber) tape so that more than half of the butyl rubber tape is overlapped.

- If the cable jacket is not waterproofed properly, then it can directly cause leakage. Make sure to protect the cable with a dense layer of taping.
- Waterproof butyl tape is made of butyl rubber that can be stretched to twice its normal length.
Optional Accessories for Installation
For your easier installation, you can purchase appropriate optional accessories available.

1. WALL MOUNT ADAPTOR(SBP-300VM)/HANGING MOUNT(SBP-300HM6)
   This adaptor is used when installing the dome camera onto a wall.

   ![Wall Mount Adaptor](image)

2. CEILING MOUNT ADAPTOR(SBP-300CM)/HANGING MOUNT(SBP-300HM6)
   This adaptor is used when installing the dome camera on a concrete ceiling.

   ![Ceiling Mount Adaptor](image)

3. The POLE MOUNT ADAPTOR(SBP-300PM) is the adapter to be used when installing the WALL MOUNT ADAPTOR (SBP-300WM or SBP-300WM1) on an 80mm or larger column.

   ![Pole Mount Adaptor](image)

4. CORNER MOUNT ADAPTOR (SBP-300KM)
   This is an adaptor for WALL MOUNT ADAPTOR (SBP-300WM or SBP-300WM1) installation on the corner of wall joint.

   ![Corner Mount Adaptor](image)

Adjusting the monitoring direction for the camera
You can adjust the camera direction only when the camera is fixed on the ceiling. Where, rotating the camera unit to the left or right is called Pan, adjusting the tilt is called Tilt, and turning the lens on its axis is called Rotation.

- **Pan rotation angle** - Quad mode: +/-30˚, Center mode: +/-60˚.
- **Rotation angle** - Quad mode: +/-90˚, Center mode: +90˚.
- **Tilt rotation angle** - Quad mode: 10˚ ~ 41˚, Center mode: CH2 = 10˚ ~ 90˚, CH 1,3,4 = 10˚ ~ 41˚.

![Adjusting Camera Direction](image)

- The image can be covered up by the camera case depending on the angle.
- Do not forcefully turn the focus/zoom lens after the dome case is disassembled. Otherwise, it may cause an incorrect focus due to a motor failure.
- If the shield cover is not used, diffuse reflection may occur.

Methods of adjustment
1. After attaching the camera, adjust the pan angle along the rails of the floor considering the monitoring direction.
2. Adjust the horizontal angle so that the image does not appear to be reversed during rotation.
3. Adjust the tilt angle so that it points in the direction to be monitored.
4. The screen may be covered by the shield cover. Make sure there is no black area on the screen through Zoom and Tele adjustment.

![Camera Adjustment Methods](image)
**INSERTING/REMOVING A MICRO SD MEMORY CARD**

- Disconnect the power cable from the camera before inserting the Micro SD memory card.
- Do not insert the Micro SD memory card while it’s upside down by force. Otherwise, it may damage the Micro SD memory card.
- When it rains or the humidity is high, insertion or ejection of a Micro SD card is not recommended.
- Disassembly of the product cover should be finished within 5 minutes, or there will be the risk of internal dew condensation.

**Inserting a Micro SD Memory Card**

1. Separate the Dome cover of the camera.
2. Insert a Micro SD card in the arrow direction shown in the figure.

**Removing a Micro SD Memory Card**

Gently press down on the exposed end of the memory card as shown in the diagram to eject the memory card from the slot.

---

**MEMORY CARD INFORMATION (NOT INCLUDED)**

**What is a memory card?**

The memory card is an external data storage device that has been developed to offer an entirely new way to record and share video, audio, and text data using digital devices.

**Selecting a memory card that’s suitable for you**

Your camera supports Micro SD/SDHC/SDXC memory cards. You may, however, experience compatibility issues depending on the model and make of the memory card.

The following types of memory cards from the following manufacturers are recommended for this camera.

- Manufacturer: SanDisk, Transcend
- Product family: High endurance

It is recommended to use a 16GB to 256GB (MLC type) memory card for this camera. Playback performance can be affected depending on the speed of memory card.

It is recommended to use a memory card of 16GB or more that conforms to the UHS-3 class (MLC type) specification.

**Memory Card Components**

- Contacts
- Micro SD/SDHC/SDXC
CONNECTING WITH OTHER DEVICE

The CVBS out terminal of the product is provided for easier installation, and is not recommended for monitoring purposes.

Ethernet Connection
Connect the Ethernet cable to the local network or to the Internet.

Power Supply
Use the screwdriver to connect each line (+, −) of the power cable to the corresponding power port of the camera.

- If both PoE+ and DC12V are applied simultaneously, the product will be supplied with power from PoE+. (PNM-9080VQ)
  - You can also use a router featuring PoE+ to supply power to the camera.
  - Use PoE+ that is compliant with the IEEE 802.3af protocols.
- It is advisable to use only one power source from PoE+ and DC 12V. (PNM-9080VQ)
- Adapter with DC 12V 3A class or higher is recommended. (PNM-9081VQ)
- We recommend using HPoE injectors for powering the unit. (PNM-9081VQ)
- Do not use DC power and HPoE injector at the same time. (PNM-9081VQ)
- Be careful not to reverse the polarity when you connect the power cable.
- If you want to connect an external device, you must turn off the external device before proceeding.
- Connect the set and the adapter power line first, and then connect the power cable to the outlet on the wall.

Connecting to the I/O port box
Connect the Alarm I/O cable to the corresponding port of the port box.

- ALARM-IN : Used to connect the alarm input sensor or external day/night sensor.
- ALARM-OUT : Used to connect the alarm output signal.
- GND : Common port for alarm in/output signal.

- If devices (e.g., flashing light and siren) that exceed the voltage and current specifications are connected by using the open collector method, it may cause malfunction.
  Refer to the "Alarm Out Wiring Diagram" when connecting devices that exceed the voltage and current specifications. (page 16)
installation & connection

To connect the external sensor
Connect one strand of each signal line (2-strand) of the sensors to the [ALARM IN] port, and connect the other strand to the [GND] port.

Alarm In Wiring Diagram

To connect the alarm out
If devices (e.g., flashing light and siren) that exceed the voltage and current specifications are connected by using the open collector method, it may cause malfunction.
Refer to the alarm out connection diagram below when connecting devices that exceed the voltage and current specifications.

⚠ N.C. (Normal Close) method is not supported.

Alarm Out Wiring Diagram
network connection and setup

You can set up the network settings according to your network configurations.

CONNECTING THE CAMERA DIRECTLY TO LOCAL AREA NETWORKING

Connecting to the camera from a local PC in the LAN

1. Launch an Internet browser on the local PC.
2. Enter the IP address of the camera in the address bar of the browser.

CONNECTING THE CAMERA DIRECTLY TO A DHCP BASED DSL/CABLE MODEM

1. Connect the user PC directly with the network camera.
2. Run the IP Installer and change the IP address of the camera so that you can use the web browser on your desktop to connect to the Internet.
3. Use the Internet browser to connect to the web viewer.
6. Move to [Basic] – [IP & Port], and set the IP type to [DHCP].
7. Connect the camera, which was removed from your PC, directly to the modem.
8. Restart the camera.

- A remote PC in an external Internet out of the LAN network may not be able to connect to the camera installed in the intranet if the port-forwarding is not properly set or a firewall is set.
  In this case, to resolve the problem, contact your network administrator.

- In the IP Installer, you can use the initial password, "4321" to set IP Address, Subnet Mask, Gateway, HTTP Port, VNP Port, IP type. After changing the network interface, for better security, access the web viewer and change the password.

- By factory default, the IP address will be assigned from the DHCP server automatically.
  If there is no DHCP server available, the IP address will be set to 192.168.1.100.
  To change the IP address, use the IP Installer.
  For further details on IP Installer use, refer to "Static IP Setup". (Page 19)
1. Connect the user PC directly with the network camera.
2. Run the IP Installer and change the IP address of the camera so that you can use the web browser on your desktop to connect to the Internet.
3. Use the Internet browser to connect to the web viewer.
6. Move to [Basic] – [IP & Port] Setup Page, set the IP type to [PPPoE], and enter the network service’s ID and password.
7. Connect the camera, which was removed from your PC, directly to the modem.
8. Restart the camera.

For configuring the DDNS settings, refer to “DDNS”. (page 39)
For registering the DDNS settings, refer to “Registering with DDNS”. (page 39)
Refer to “IP & Port” for how to setup IP. (page 32)

Configuring the network settings of the local PC connected to a Broadband Router
Configuring the network settings of the local PC connected to a Broadband Router, follow the instructions below.

- Select : \{Network\} → \{Properties\} → \{Local Area Connection\} → \{General\} → \{Properties\} → \{Internet Protocol (TCP/IP)\} → \{Properties\} → \{Obtain an IP address automatically\} or \{Use the following IP address\}.
- Follow the instructions below if you select \{Use the following IP address\}:
  ex1) If the address (LAN IP) of the Broadband Router is 192.168.1.1
  IP address : 192.168.1.100
  Subnet Mask : 255.255.255.0
  Default Gateway : 192.168.1.1

  ex2) If the address (LAN IP) of the Broadband Router is 192.168.0.1
  IP address : 192.168.0.100
  Subnet Mask : 255.255.255.0
  Default Gateway : 192.168.0.1

  ex3) If the address (LAN IP) of the Broadband Router is 192.168.xxx.1
  IP address : 192.168.xxx.100
  Subnet Mask : 255.255.255.0
  Default Gateway : 192.168.xxx.1

- For the address of the Broadband Router, refer to the product’s documentation.
- For more information about port forwarding of the broadband router, refer to “Port Range Forward (Port Mapping) Setup”. (Page 21)
### Buttons Used in IP Installer

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Device Name</td>
<td>Model name of the connected camera. Click the column to sort the list by model name. However, search will be stopped if clicked during the search.</td>
</tr>
<tr>
<td>2 Alias</td>
<td>This function is not currently implemented.</td>
</tr>
<tr>
<td>3 Mode</td>
<td>Displays either &lt;Static&gt;, &lt;Dynamic&gt; or &lt;PPPoE&gt; for the current network connection status.</td>
</tr>
<tr>
<td>4 MAC(Ethernet) Address</td>
<td>Ethernet address for the connected camera. Click the column to sort the list by Ethernet address. However, search will be stopped if clicked during the search.</td>
</tr>
<tr>
<td>5 IP Address</td>
<td>IP address. Click the column to sort the list by IP address. However, search will be stopped if clicked during the search.</td>
</tr>
<tr>
<td>6 Protocol</td>
<td>Network setting for the camera. The factory default is &quot;IPv4&quot;. Cameras with the IPv6 setting will be displayed &quot;IPv6&quot;.</td>
</tr>
<tr>
<td>7 URL</td>
<td>DDNS URL address enabling access from the external Internet. However, this will be replaced with the &lt;IP Address&gt; of the camera if DDNS registration has failed.</td>
</tr>
<tr>

<td>Scans for cameras with the IPv4 setting.</td>
</tr>
<tr>
<td>9 IPv6</td>
<td>Scans for cameras with the IPv6 setting. Activated in an IPv6 compliant environment only.</td>
</tr>
<tr>
<td>10 Search</td>
<td>Scans for cameras that are currently connected to the network. However, this button will be grayed out if neither IPv4 nor IPv6 is checked.</td>
</tr>
<tr>
<td>11 Auto Set</td>
<td>The IP Installer automatically configures the network settings.</td>
</tr>
<tr>
<td>12 Manual Set</td>
<td>You should configure the network settings manually.</td>
</tr>
<tr>
<td>13 Exit</td>
<td>Exits the IP Installer program.</td>
</tr>
</tbody>
</table>

For cameras found with the IPv6 setting, these buttons will be grayed out as the cameras do not support this function.

#### Static IP Setup

Manual Network Setup

Run `<IP Installer_v2.XX.exe>` to display the camera search list. At the initial startup, both [Auto Set] and [Manual Set] will be grayed out.

- For cameras found with the IPv6 setting, these buttons will be grayed out as the cameras do not support this function.

1. Select a camera in the search list. Check the MAC address of the camera on the camera's label. Both the [Auto Set] and [Manual Set] buttons will be activated.
2. Click [Manual Set]. The Manual Setting dialog appears. `<IP Address>`, `<Subnet Mask>`, `<Gateway>`, `<HTTP Port>`, and `<VNP Port>` of the camera are displayed in the preset values.
3. In the `<Address>` pane, provide the necessary information.
   - MAC (Ethernet) Address: The MAC address imprinted on the camera label is automatically displayed and requires no user setting.
   - IP related parameters can be set only when DHCP is not checked.
If not using a Broadband Router
For setting <IP Address>, <Subnet Mask>, and <Gateway>, contact your network administrator.

4. In the <Port> pane, provide necessary information.
   • HTTP Port : Used to access the camera using the Internet browser, defaulted to 80.
   • VNP Port : Used to control the video signal transfer, defaulted to 4520.
5. Enter the password.
   Enter the password of "admin" account, which was used to access the camera.
   - For the security purposes, you are recommended to use a combination of numbers, alphabets uppercase and lowercase and special characters for your password.
   - If you want to change the password, refer to "Administrator password change" of the user setup. (page 31)
6. Click [OK].
   Manual network setup will be completed.

If using a Broadband Router
• IP Address : Enter an address falling in the IP range provided by the Broadband Router.
  ex) 192.168.1.2–254, 192.168.0.2–254, 192.168.XXX.2–254
• Subnet Mask : The <Subnet Mask> of the Broadband Router will be the <Subnet Mask> of the camera.
• Gateway : The <Local IP Address> of the Broadband Router will be the <Gateway> of the camera.

  - The settings may differ depending on the connected Broadband Router model.
  - For more information, refer to the user manual of the applicable router.
  - For more information about port forwarding of the broadband router, refer to "Port Range Forward (Port Mapping) Setup". (Page 21)

If the Broadband Router has more than one camera connected
Configure the IP related settings and the Port related settings distinctly with each other.

<table>
<thead>
<tr>
<th>Category</th>
<th>Camera #1</th>
<th>Camera #2</th>
</tr>
</thead>
<tbody>
<tr>
<td>IP related settings</td>
<td>IP Address</td>
<td>192.168.1.100</td>
</tr>
<tr>
<td></td>
<td>Subnet Mask</td>
<td>255.255.255.0</td>
</tr>
<tr>
<td></td>
<td>Gateway</td>
<td>192.168.1.1</td>
</tr>
<tr>
<td>Port related settings</td>
<td>HTTP Port</td>
<td>8080</td>
</tr>
<tr>
<td></td>
<td>VNP Port</td>
<td>4520</td>
</tr>
</tbody>
</table>

- If the <HTTP Port> is set other than 80, you must provide the <Port> number in the address bar of the Internet browser before you can access the camera.
  ex) http://IP address : HTTP Port
  http://192.168.1.100:8080

Auto Network Setup
Run <IP Installer_v2.XX.exe> to display the camera search list.
At the initial startup, both [Auto Set] and [Manual Set] will be grayed out.

- For cameras found with the IPv6 setting, these buttons will be grayed out as the cameras do not support this function.

1. Select a camera in the search list.
   Check the MAC address of the camera on the camera's label.
   Both the [Auto Set] and [Manual Set] buttons will be activated.
2. Click [Auto Set].
   The Auto Setting dialog appears.
   The <IP Address>, <Subnet Mask>, and <Gateway> will be set automatically.
3. Enter the password.
   Enter the password of "admin" account, which was used to access the camera.
   - For the security purposes, you are recommended to use a combination of numbers, alphabets uppercase and lowercase and special characters for your password.
   - If you want to change the password, refer to "Administrator password change" of the user setup. (page 31)
4. Click [OK].
   Auto network setup will be completed.
DYNAMIC IP SETUP

Dynamic IP Environment Setup

- Example of the Dynamic IP environment
  - If a Broadband Router, with cameras connected, is assigned an IP address by the DHCP server
  - If connecting the camera directly to modem using the DHCP protocols
  - If IPs are assigned by the internal DHCP server via the LAN

Checking the Dynamic IP

1. Run the IP Installer on the user’s local computer.
2. Select a camera from the search result.
3. Click the [Manual Set] button and check the camera’s <Dynamic IP> address.
   If you uncheck <DHCP>, you can change IP to <Static>.

PORT RANGE FORWARD (PORT MAPPING) SETUP

If you have installed a Broadband Router with a camera connected, you must set the port range forwarding on the Broadband Router so that a remote PC can access the camera in it.

Manual Port Range Forwarding

1. From the Setup menu of the Broadband Router, select <Applications & Gaming> - <Port Range Forward>.
2. Select <TCP> and <UDP Port> for each connected camera to the Broadband Router.
   The number of each port to be configured to the IP router should be set according to the port number designated in <Setup> - <Basic> - <IP & Port> on the camera web viewer.

3. When done, click [Save Settings].
   Your settings will be saved.

- Above sample instructions are based on the CISCO’s Broadband Router.
- The settings may differ depending on the connected Broadband Router model.
  For more information, refer to the user manual of the applicable router.

Setting up Port Range Forward for several network cameras

- You can set a rule of Port Forwarding on the Broadband Router device through its configuration web page.
- A user can change each port using the camera setting screen.

When Camera1 and Camera2 are connected to a router:

<table>
<thead>
<tr>
<th>Start</th>
<th>End</th>
<th>Protocol</th>
<th>IP Address</th>
</tr>
</thead>
<tbody>
<tr>
<td>3000</td>
<td>3000</td>
<td>TCP/UDP</td>
<td>192.168.1.100</td>
</tr>
<tr>
<td>3001</td>
<td>3001</td>
<td>TCP/UDP</td>
<td>192.168.1.101</td>
</tr>
<tr>
<td>4520</td>
<td>4520</td>
<td>TCP/UDP</td>
<td>192.168.1.100</td>
</tr>
<tr>
<td>4521</td>
<td>4521</td>
<td>TCP/UDP</td>
<td>192.168.1.101</td>
</tr>
<tr>
<td>8080</td>
<td>8080</td>
<td>TCP/UDP</td>
<td>192.168.1.100</td>
</tr>
<tr>
<td>8081</td>
<td>8081</td>
<td>TCP/UDP</td>
<td>192.168.1.101</td>
</tr>
</tbody>
</table>

- Port forwarding can be done without additional router setup if the router supports the UPnP (Universal Plug and Play) function.
  After connecting the network camera, select the checkbox from the menu <Quick connect> in <Wisenet DDNS> in “Settings >> Network >> DDNS”.

User Internet Broadband Router

Camera1 (192.168.1.100)
- HTTP port: 8080
- Device port: 4520
- RTSP port: 3000

Camera2 (192.168.1.101)
- HTTP port: 8081
- Device port: 4521
- RTSP port: 3001
network connection and setup

CONNECTING TO THE CAMERA FROM A SHARED LOCAL PC

1. Run the IP Installer.
   It will scan for connected cameras and display them as a list.
2. Double-click a camera to access.
   The Internet browser starts and connects to the camera.

   - Access to the camera can also be gained by typing the camera’s IP address in the address bar of the Internet browser.

CONNECTING TO THE CAMERA FROM A REMOTE PC VIA THE INTERNET

Since using the IP Installer on a remote computer that is not in the Broadband Router’s network cluster is not allowed, users can access cameras within a Broadband Router’s network by using the camera’s DDNS URL.

1. Before you can access a camera in the Broadband Router network, you should have set the port range forward for the Broadband Router.
2. From the remote PC, launch the Internet browser and type the DDNS URL address of the camera, or the IP address of the Broadband Router in the address bar. (ex) http://ddns.hanwha-security.com/ID

   - For registering the DDNS settings, refer to “Registering with DDNS”. (page 39)
web viewer

CONNECTING TO THE CAMERA

Normally, you would

1. Launch the Internet browser.
2. Type the IP address of the camera in the address bar.

   ex) IP address (IPv4) : 192.168.1.100 → http://192.168.1.100
   - the Login dialog should appear.

If the HTTP port is other than 80

1. Launch the Internet browser.
2. Type the IP address and HTTP port number of the camera in the address bar.

   ex) IP address : 192.168.1.100:HTTP Port number(8080)

Using URL

1. Launch the Internet browser.
2. Type the DDNS URL of the camera in the address bar.

   ex) URL address : http://ddns.hanwha-security.com/ID
   - the Login dialog should appear.

   Network connection is disabled in the LAN only environment.

Connecting via UPnP

1. Run the client or operating system in support of the UPnP protocol.
2. Click the camera name for search.

   - In the Windows operating system, click the camera name searched from the network menu.
   - The login window is displayed.

Connecting via Bonjour

1. Run the client or operating system in support of the Bonjour protocol.
2. Click the camera name for search.

   - In the Mac operating system, click the camera name searched from the Bonjour tab of Safari.
   - The login window is displayed.

To check the DDNS address

If the camera is connected directly to the DHCP cable modem, DSL modem, or PPPoE modem, the IP address of your network will be changed each time you try to connect to the ISP (Internet Service Provider) server.

If this is the case, you will not be informed of the IP address changed by DDNS.

Once you register a dynamic IP-based device with the DDNS server, you can easily check the changed IP when you try to access the device.

To register your device to the <DDNS> server, visit http://ddns.hanwha-security.com and register your device first, and then set the Web Viewer’s <Network>-<DDNS> to <Wisenet DDNS>, as well as providing <Product ID> that had been used for DDNS registration.
PASSWORD SETTING

When you access the product for the first time, you must register the login password. When the “Password change” window appears, enter the new password.

- For a new password with 8 to 9 digits, you must use at least 3 of the following: uppercase/lowercase letters, numbers and special characters. For a password with 10 to 15 digits, you must use at least 2 types of those mentioned.
  - Special characters that are allowed: ~`!@#$%^*()_-+=|{}[].?/
- For higher security, you are not recommended to repeat the same characters or consecutive keyboard inputs for your passwords.
- If you lost your password, you can press the [RESET] button to initialize the product. So, don’t lose your password by using a memo pad or memorizing it.

LOGIN

Whenever you access the camera, the login window appears. Enter the User ID and password to access the camera.

1. Enter “admin” in the <User name> input box. The administrator ID, “admin”, is fixed and can not be changed.
2. Enter the password in the <Password> input field.
3. Click [OK].

If you have logged in successfully, you will the Live Viewer screen.

- When you access the camera web viewer, pay special attention to the security by checking whether the image data is encrypted.

- If you check the “Remember my credentials” option when your input is done, in future you will be logged in automatically without being prompted to enter the login information.

- You will experience the best video quality if the screen size is 100%. Reducing the ratio may cut the image on the borders.

PLUG-IN SUPPORT SPECIFICATIONS FOR EACH BROWSER

The existing plug-in web viewer and a new plug-in free web view is embedded together. This allows you to use the web viewer in newer browser environments that do not support plug-ins, such as Chrome, EDGE, FireFox (Windows 64-bit only), and Safari. For browsers that allow the installation of plug-ins, such as IE and Safari, installing the plug-in is recommended.

According to the browser environment, the following differences may be observed.

- **Chrome, FireFox(Windows 64bit only), EDGE browser**: Although they don’t support plug-ins, you can use a web viewer as a plug-in free web viewer is embedded.
  - As the plug-in free webviewer has lower performance than the plug-in webviewer, it has a limit on the monitoring of high quality profiles and playback of saved videos.
  - To monitor high quality profiles and play saved videos, use either a plug-in webviewer or SmartViewer.
  - Plugin-free webviewer creation conditions: The selected profile exceeds MPEG Full HD 10fps H.264 (Chrome : full screen resolution supported / Edge, Firefox, Safari : Full HD 30 fps or higher) H.265 FullHD 10fps 2Mbps or higher
  - Plugin-free playback conditions: MPEG/H.264 full screen resolution, H.265 HD or below
- **IE, Safari browser**: You can use a web viewer even if you don’t install the existing plug-in web viewer.
  - To monitor/play saved video seamlessly, you are required to install a plug-in.

Supports Adaptive Streaming
- This is the feature that automatically lowers the profile if there is a delay of more than 5 seconds. It was made to prevent issues such as increased latency and no response from the browser when playing the video on a system with lower hardware specifications than recommended.
- The video profile is reduced in the following sequence: 1920X1080(20fps) -> 1280X720(20fps) -> 640X480(20fps).

- The plug-in free feature has been optimized for the Chrome browser.

- To monitor/play saved video seamlessly, you are required to install a plug-in.
**INSTALLING WebViewer PLUGIN**

To access the plug-in webviewer and play a live video (H.264/H.265) or a recorded video, an installation message will be prompted. At this time you need to install the webviewer plug-in to use the function properly.

1. When the monitoring page is accessed for the very first time, the installation page is displayed. Click [Download plugin] to begin installation.
   - If the plug-in installation file download status is suspended at 99% in the Internet Explorer browser, retry it after selecting “Release SmartScreen filter” in “Tool → SmartScreen filter”.
2. Click [Run] in the message window.
3. Click [Yes] when the notice window saying that all browser windows will be closed.
   - Steps 4 and 5 will be skipped if no Web Viewer Plug-in is installed.
4. When the old version of the Web Viewer Plug-in is installed, a notice window saying the old version will be deleted is displayed. Click [Yes] when the notice window is displayed.
5. Click [OK]. The old version of Web Viewer Plug-in is deleted.
6. Click [Install] to begin installation of the Web Viewer Plug-in.
7. Click [Finish].
   - Web Viewer Plug-in installation is completed.

   In your internet explorer, if you need to move to the installation screen after installing the webviewer plugin, check whether webviewer_activeplugin_plb.control in the “Tool → Additional Function Management” menu is “Activated”. If not, and if there is a persisting problem, then select “Tools → Internet Options → General” and delete all the search records. If the problem persists, please register the IP or Domain of your camera in “Tools → Internet Options → Security → Trusted sites”.

**USING A PLUG-IN FREE WEBVIEWER**

Although it is not possible to install plug-ins separately if you access the camera from Google Chrome, Mozilla Firefox, or the MS Edge web browser, you can view and control the camera video without installing plug-ins.

1. Enter your username and password to log in.
2. When you are logged in, a camera live view screen appears.

**USING THE LIVE SCREEN**

<table>

</tr>
</thead>
<tbody>
<tr>
<td>7 Channel change</td>
<td>Set camera channels to be displayed on the live screen. (Single screen / 4-way split screen)</td>
</tr>
</tbody>
</table>
| 8 Profile type | You can select a profile type in <Video profile> under the <Basic> setup menu.  
  - Click the icon to display the name of the current profile.  
  - Afterimages can be displayed on the screen under the following conditions if the video is played in the monitoring page:  
    - The resolution is changed due to a profile change.  
    - Incoming data is being slowed due to a network delay when the profile is changed.  
    - The web browser window size and location is changed. |
| 9 Profile access information | You can read the profile information. |
| 10 Switch View Mode | **Full Screen** **( )**  
  Double click on the video screen, and the current video will be played in the full screen of the monitor.  
  **Fit to screen** **( )**  
  A view mode in which the size of the camera video automatically fits to the web browser size.  
  **Size of the original file** **( )**  
  View mode in which the video is played in the actual resolution.  
  **Maintain Aspect Ratio** **( )**  
  View mode that adjusts the aspect ratio to best fit the resolution. |
| 11 Capture | Saves the current image as an image file. (Format may vary depending on the browser) |
| 12 Record | The user can save the video on the PC. |
| 13 Pixel Counter | Checks the number of pixels in the selected area on the video screen. |
| 14 Alarm output | Activate the Alarm Out port. |

### To capture the snapshot
1. Click [Capture ( )] on the scene to capture.
2. When a captured video is saved, a notification message appears. The captured image is saved in the designated folder for each browser.

   |   |
   |   |

* If the screen is not captured by IE browser in Windows 7 or higher, run the IE Browser with the Admin privilege.

### To save
1. Click the [Record ( )] icon.
2. To end the recording, press [Record ( )] again.

   |   |
   |   |

* You can save the recorded file on the PC in an avi file format. Designate a path and save the video.

### To fit the full screen
1. Click the [Full Screen ( )] icon.
2. This will fit the Viewer to the full screen.
3. To leave full screen mode, click the [Full Screen ( )] button again or press the [Esc] key on the keyboard.

### To count the number of pixels
1. Click the [Pixel count ( )] icon to activate it.
2. Drag the mouse on the video to select an area.
3. The number of pixels in the selected area is displayed on the screen.

### Some functions may not work on a specific browser or codec.

### To change channels
1. Select the desired channel number.
2. The viewer screen shows the corresponding channel.
3. Click the [ ] icon to display the 4-way split screen.
4. Click on the channel number to return to the single screen.
To check the profile status
You can check the profile information.

1. Click the [Status (1)] icon.
2. The profile access information screen is updated whenever the screen is enabled.
   - Profile access : Show the information of the newly added profile.
   - Bitrate(kbps) : Show both the actual bit rate and the set bit rate.
   - Framerate(fps) : Show both the actual frame rate and the set frame rate.
   - Concurrent users count : Show the number of concurrent users who access the profile.
   - Current users : Shows information on users accessing web viewer and displaying monitoring video.
     - Profile : Show the name of the profile accessed by the user.
     - Bitrate(kbps) : Show the current bit rate.
     - Network connection status : It shows whether the network is working fine.
     - IP address : Show the IP address of the current user.

PLAYING THE RECORDED VIDEO

- Before you can play the video, you must configure the record settings. For details on record settings, refer to “Storage” (page 43).

Playback Screen Name and Features

<table>

<td>View mode that adjusts the aspect ratio to best fit the resolution.</td>
</tr>
</tbody>
</table>

### Capture

Saves the current video screen in an image file format (format may vary depending on the browser).

### Backup

Set the desired date to make a backup copy of video data saved in your Micro SD memory card.
- You can set up to 5 minutes for the backup of a saved video.

### Viewer Screen

The recorded video will appear.

---

To play the content after searching by event

1. On the Playback screen, click the [Show ( > )] button.
2. If there is a video recorded on the date of search, the applicable video is displayed on the time bar.
3. To perform a search by event type, click the [All] button at the top of the time bar and select an event type.
4. When done, click [Apply].
5. Click the [Play ( > )] button.
6. To pause the video, click the [Pause ( ] button.

To play after searching by time

1. Click the [ ] icon.
2. On the calendar, set the search date, start time and end time. The event searched is displayed on the time bar.
3. Click the [Play ( > )] button.
4. The video at the selected time will be played.
5. When a video is played, the recording time of the video currently being played is displayed.
6. Search the video forward and backward and adjust the playback speed.
   - How to Move Playback Interval
     When the [ ] button is selected, it moves forward by 1 frame/moves backward by i frame.
   - How to Control Playback Speed
     Click the [ ] button and you can select a speed of either 1x, 2x, 4x and 8x or -1x, -2x, -4x and -8x, and you can set the playback speed as desired.
7. Move the position of the [Time Bar ( ] to play the video at a desired time.

To back up the searched video

1. During playback, click [Backup] on the scene to back up. The data in the applicable section will be backed up.
2. Click [Apply] button.
   The Save As window appears.
3. Confirm the save path and click [Save] button.
   The screenshot will be backed up to the specified path.

### To play the backup video

The backed up images are saved in an .avi format. Installing the media player that supports the format for the user PC is recommended.

- If playback does not run smoothly due to the user environment, optimizing by installing the latest codec and other methods are required.

### Micro SD memory card

1. Separate the Micro SD memory card from the camera.
2. Before separating the Micro SD memory card, set the <Device> to <Off> in the “Setup → Event → Storage” menu.
3. Insert the Micro SD memory card into the PC.
4. Play the AVI file in the “recordingDatayyyy_mm_DD.avi” directory, using a media player.

- A filename starts with the format “001_YYYYMMDD_HHMMSS.avi” and the file number is incremented by one.
  YYYYMMDD_HHMMSS indicates the start time of data saving.
- “001_YYYYMMDD_HHMMSS.smi” file is a caption file, and you can view it if it exists in the same directory as its related AVI file.
- Once corrupted, the data in the Micro SD memory card cannot be replayed in the Web Viewer’s [Playback].
You can configure the basic camera information, video, network, event, analyze and system settings.

1. On the live screen, click the [Setup (lv)] button.
2. The Setup screen appears.

**Basic Setup**

**Video profile**

1. From the Setup menu, select the <Basic (B)> tab.
2. Click <Video profile>.
3. Select a channel to set the item to.
4. Set the <Video profile connection policy>.
   - Keep connection when profile setting is changed : Output uses the same settings even when the settings of the active profile are changed.
   - If not selected, changing a profile used by an existing connection resets such connection.
5. Select each profile properties.
   - For more details, refer to “To Add/Change the Video Profile”. (Page 30)
6. Click the input box of each item and enter / select a desired value.
   - The context menu may differ depending on the selected codec type.
   - Default profile : If no profile is selected when using the Web Viewer, the default video profile is applied.
   - E-mail/FTP profile : Video profile to be transferred to the specified email or FTP site.
   - Only the MJPEG codec can be set as the E-mail/FTP profile.
   - Record profile : This is the profile that is applied to video recording.
7. Select Able or Disable for the Crop Encoding function.
   - For more details, refer to “To Use Crop Encoding”. (Page 31)
   - Crop encoding : It cuts only the selected area out of the full screen and outputs it at the resolution specified in <Profile setting>.
   - The resolution should be less than the Crop Encoding setting area.
8. When done, click [Apply].
To Add/Change the Video Profile

The profile setup can be added or modified to accommodate various profiles depending on the recording conditions.

1. In `<Video profile>`, click the `<Add>` button.
2. Provide the name and select a codec.
3. Specify the conditions under which the codec will be applied.
4. Specify the details of the selected codec including resolution and frame rate.
   - Resolution : Set the video size of the H.264/H.265 and MJPEG files.
   - Frame rate : Set the max number of video frames per sec.

   The Sensor mode setup in Camera Setup changes the maximum configurable framerate.

<table>
<thead>
<tr>
<th>Sensor</th>
<th>25 fps</th>
<th>30 fps</th>
<th>50 fps</th>
<th>60 fps</th>
</tr>
</thead>
<tbody>
<tr>
<td>Framerate</td>
<td>1–25 fps</td>
<td>1–30 fps</td>
<td>1–50 fps</td>
<td>1–60 fps</td>
</tr>
</tbody>
</table>

   - Maximum bitrate : Set the max bit rate of video when the bit rate control is set to VBR.
   - Target bitrate : Set the target bit rate when the bit rate control is set to CBR.
   - Bitrate control : You can select one from constant bit rate and variable bit rate for compression. Fixed bitrate means that the network transmission bitrate is fixed while varying the video quality or frame rate, variable bitrate means that a higher priority is placed on the video quality while varying the bitrate.
   - After setting the fixed bit rate for bit control, if you select the video quality priority mode, depending on the complexity of the screen, the actual transmitted frame rate may differ from the frame rate setup in order to guarantee the optimal video quality for the given bit rate.
   - Encoding priority : You can set the priority of video transmission to frame rate or compression.
   - GOV length : It specifies the distance (in terms of number of frames) between two consecutive I-Frames in a video sequence when H.264/H.265 codec was selected. (One I-Frame + 0–Several P-Frames)
   - Profile : You can select the H.264/H.265 profiling method.
   - Entropy coding : Reduce the possible compression loss due to encoding.
   - Smart codec : Specify the use of Smart codec.

   You can use this when the bit rate control value is CBR. Detailed settings are configured in the Smart Codec on the Audio & Video tab. (Page 38)

   - Dynamic GOV : When the bit rate control is VBR in H.264/H.265 codec, it makes the GOV length automatically change to the set value of the maximum dynamic GOV.
   - Dynamic FPS : Set the FPS value to automatically change the setting of the FPS value to the maximum dynamic value when the bit rate control is VBR between H.264/H.265 codec.
   - Multicast(RTSP) : Specify the use of the RTSP protocol.
     - IP address : Enter an IPv4 address with which you can connect to the IPv4 network.
     - Port : Specify the video communication port.
     - TTL : You can set the TTL for the RTP packet.

   If you set the Multicast address to 224.0.0.0–224.0.0.255, multicast may not work properly in all environments. In that case, we recommend you change the multicast address.

What is GOV length?

GOV(Group of Video object planes) is a set of video frames for H.264/H.265 compression, indicating a collection of frames from the initial I-Frame to the next I-Frame. GOV consists of 2 kinds of frames: I-Frame and P-Frame.

I-Frame is the basic frame of compression, and contains data for a completed single image. P-Frame contains only the data that has changed from the preceding I-Frame.

For H.264/H.265 codec, you can determine the GOV length.

If you set a recording profile with H.264/H.265 codec, the GOV length will be framerate/2.

What is dynamic GOV?

Dynamic GOV is a function that enables the GOV to automatically change in a range from the set value of the minimum GOV length to the maximum dynamic GOV set value according to the situation of the video.

In a video with almost no motion, GOV operates with the dynamic GOV settings, which makes the bit rate of the entire video reduced. The I-frame is output right after a motion is detected and GOV operates with the GOV length settings until the motion disappears.

If you use this function, the GOV of a video operates with the minimum GOV length settings.
To Use Crop Encoding

1. Select <Enable>.
2. Click <Set area>.
   The Crop Encoding Area Setup window will pop up.
   • 16:9 : The aspect ratio shall be set to 16:9 as close as to the user specified area.
   The supporting size ranges from 640X360 to 1280X720 and supporting output resolutions are 640X360, 800X480, 1280X720.
   • 4:3 : The aspect ratio shall be set to 4:3 as close as to the user specified area.
   The supporting size ranges from 320X240 to 1280X960 and supporting output resolutions are 320X240, 640X480, 800X600, 1024X768, and 1280X960.
   • Manual : It sets up the aspect ratio of the user specified area.
   The supporting size ranges from 320X240 – 1280X1024 and all supporting output resolutions are available except 1920X1080.
3. Drag the mouse on the screen to specify the Crop Encoding area at your discretion.

   - If you select output as <Manual>, you can specify a desired range. However, if output is only available at a supported resolution, the image will be output at the resolution that is closest to the range you specified.
   - The Crop Encoding area setup can change depending on the DIS setup. Reset the Crop Encoding area when the DIS setup is changed.

User

1. From the Setup menu, select the <Basic ( ))> tab.
2. Click <User>.
3. Provide the necessary user information.
   • Administrator password change : Change the password for the administrator.
     - For the security purposes, you are recommended to use a combination of numbers, alphabets uppercase and lowercase and special characters for your password.
     - It is recommended to change your password once every three months.
     - The password length and limits are shown as follows.
       - A combination of at least three types of upper case, lower case, numeric, and special characters: 8 to 9 characters.
       - A combination of at least two types of upper case, lower case, numeric, and special characters: 10 to 15 characters.
       - Should be different from the ID.
       - Cannot repeat the same letter, number of special characters more than 4 times.
       - Don’t use 4 or more characters consecutive together. (examples : 1234, abcd)
       - Don’t use 4 or more characters repeated. (examples : !!!!, 1111, aaaa)
       - Special characters that are allowed. : ~`!@#$%^*()_-+=|{}[].?/
       - After the factory setting, the admin and user passwords are initialized. You need to reset the password.
       - When you access the camera web page for the first time or access it after the initialization, you will be moved to the admin password setting menu.
       - In this menu, you need to login again with the new password before using the camera web page menus.
       - If the existing password is not matched, when you change the admin password, you cannot change the password.
       - After changing your password, if there is a camera connected to a CMS or NVR client, then you need to re-register it with the newly changed password. If the camera is still connected with the same password, then the account may be locked because a client uses the previous password.
       - If you try to login with the registered account, 5 or more consecutive password authentication has failed, and then the account may be locked for thirty seconds.
       - When the password is changed while multiple connections are active from a PC, the browser may malfunction. In that case, reconnect to the server.
   - Guest setup : If you select <Enable guest access>, the guest account can access the Web viewer screen but can only view the live Viewer screen.
     - The ID/password for the guest account is <guest/guest>, which cannot be changed.
   - Authentication setup : If you select <Enable RTSP connection without authentication>, you can access RTSP without logging in and view the video.
• Current users: If you select <Use>, you can set or change the user permissions.
  - The administrator may set up alarm output authority.
  - Alarm output: You can enable/disable Alarm output in the live mode on the current user account.
  - Profile: If you select <Default>, you can only see the default profile video; if selecting <All>, you can see the full profile videos.

ONVIF functions available to a registered user allowed to use ONVIF functions are limited to those of granted with permission.

4. When done, click [Apply].

Date & Time
1. From the Setup menu, select the <Basic ( )> tab.
2. Click <Date & Time>.
3. Specify the time and date that will be applied to the camera.
  • Current system time: Displays the current time settings of your system.
  • Timezone: Specify the local time zone based on the GMT.
  • Daylight saving time: If checked, the time will be set one hour before the local time zone for the specified time period. This option will be displayed only in areas where DST is applied.
  • System time setup: Specify the time and date that will be applied to your system.
    - Manual: Sets the current time of the camera manually.
      - When you select the <Synchronize with PC viewer> check box, the time of the webviewer is set to the time displayed on the PC that runs the webviewer.
      - Synchronize with NTP server: Sync with the time of the specified server address.
 4. When done, click [Apply].

If you select the <Synchronize with PC viewer>, the standard timezone should be set the same as the current timezone in PC.

IP & Port
1. From the Setup menu, select the <Basic ( )> tab.
2. Click <IP & Port>.
3. Click <IP address>.
4. Set the <IPv4 setup>.
  • IP type: Select an IP connection type.
  - Manual: Specify the IP address, Subnet mask, Gateway, DNS1, and DNS2.
  - DHCP: Specify the DNS1 and DNS2.
  - PPPoE: Specify the DNS1, DNS2, ID and Password.
    - If you set it to <Manual>, you should specify the IP, Subnet mask, Gateway, DNS 1 & 2 manually.
  • MAC address: Shows the MAC address.
  • IP address: Displays the current IP address.
  • Subnet mask: Displays the <Subnet mask> for the set IP.
  • Gateway: Displays the <Gateway> for the set IP.
  • DNS1/DNS2: Displays the DNS(Domain Name Service) server address.
  • Host name: Displays the host name.
5. Set the <IPv6 setup>.
  • Set to <Use> to use IPv6 address.
  - Default: Use the default IPv6 address.
  - DHCP: Display and use the IPv6 address obtained from the DHCP server.
  - Manual: Enter IP address and gateway manually and use it.

- The IP addressing system will be defaulted to DHCP. If no DHCP server is found, the previous settings will be restored automatically.
  - Once completed with editing, click [Apply] to apply changes and the browser exits. After a while, connect again with the changed IP.
6. Click <Port>.
7. Type in each item in the Port menu as necessary.
   - HTTP: HTTP port used to access the camera via the web browser.
     The default is 80(TCP).
   - Setting the HTTP port for Safari and Google Chrome browsers to 65535 is not allowed by security policy.
   - HTTPS: In this version, the security of the web communication protocol HTTP is strengthened. It can be used when you set HTTPS mode in SSL.
     The initial value is set to 443(TCP).
   - The available setting range is 1024~65535. (For security reasons, in your Safari or Google Chrome browser, you may not use 65535 as your HTTPS port.)
   - RTSP: Used to transfer videos in the RTSP mode; the default is 554.
   - Timeout: When connecting to RTSP, this function resets the connection if there's no response for a certain time.
   - If changed the HTTP port, the browser exits.
     Afterwards, address should contain the newly assigned HTTP port trailing the IP.
     (If HTTP port is set to 80, no need to specify the port number)
   - Using RTSP and HTTPS is recommended in order to prevent the image information from being restored.
8. When done, click [Apply].

**VIDEO & AUDIO SETUP**

### Video setup
1. From the Setup menu, select the <Video & Audio ( )> tab.
2. Click <Video setup>.
3. Select a channel to set the item to.
4. Select a <Video rotation> mode.
   - Flip: Turn upside down the image that is captured by the camera.
   - Mirror: Flip horizontal the image that is captured by the camera.
   - Hallway view: Rotates the video captured by the camera according to the set angle.
     You can rotate the video 0, 90 or 270 degrees.
     - If you change settings, the browser window will be closed and the camera restarted. Please access again later.
5. Specify whether to use the analog video output function.
   - To decrease the performance reduction, the usage should only be unlocked after installation.
6. Select the video type.
7. Specify the privacy zone.
   - You can set the pattern of the privacy area either to Opaque or Mosaic.
8. When done, click [Apply].

To set the privacy zone
You can specify a certain area of the camera video to be protected for your privacy.
1. Set it to <Enable Privacy area>.
2. Click [Apply].
3. Select 4 vertices on the screen with your mouse to specify the area.
4. Enter the name and select the color, and then click [OK].
5. If you want to delete a name in the list, select it and click [Delete].
6. To change the pattern of the configure privacy area, select the pattern from the pattern list and click the [Apply] button.
Camera setup
You can change the camera settings according to the environment where the camera is located.

1. From the Setup menu, select the <Video & Audio (AU)> tab.
2. Click <Camera setup>.
3. Select a channel to set the item to.
4. Configure the settings as necessary of: Image preset mode, Sensor, SSDR, White balance, Backlight, Exposure, Day/Night, Special, OSD
5. When done, click [Apply].
   - If a certain time (timeout: 240s) is elapsed without pressing the [Apply] button after changing the settings, your changes will not be applied.

If you want to set an image preset
Users can set presets easily.
The selected image preset mode will be in operation during the configured period, but at other times, the values configured in the user preset mode are reflected.

1. Select a desired mode from the image presets.
   - High definition : This is the factory setting for your camera. Select it for video recording, focusing on reproducibility.
   - Motion : Record a moving object clearly. If there are many moving objects, such as on a road or in a crowded place like a museum, select this option.
   - Noise level can increase in a low illumination environment, and sensitivity can go down.
   - Noise reduction : Select this when you need a video with low noise in the low illumination environment.
   - Bright video : This makes the dark area in a full video brighter.
   - Video contrast effects are reduced.
   - Motion & Noise reduction : Use this when there are many moving objects, such as on a road or in a crowded place like a museum, or when you need a video with low noise in a low illumination environment.
   - Motion & Bright video : Use it when there are many moving objects, such as on a road or in a crowded place like a museum, or when you need to make a dark area in full video brighter.
   - Vivid video : Makes the entire video displayed in vivid colors.
   - The contrast of the video reduces and the color reproducibility becomes low.
   - User preset : Select it if you want to display video with settings chosen by you.
   - When selecting a mode other than the preset mode, you can’t set the shutter speed, AGC, SSDR, SSNR and color.

2. Set the camera item for each image preset mode.
3. Set the <Activation time>.
   - Off : Your camera will execute a specific image preset operation at all times.
   - Only scheduled time : Your camera will execute a specific image preset operation for the time period set by you on each date.
4. Click the [ ] button.
5. Set the <Mode> and <Time>.
6. When done, click [Apply].

Initial setting for each image preset mode

</tbody>
</table>

- The preset setup functions as an aid to users to configure setup. If you don’t want the preset function, deactivate it before use.
- If you change the image preset, only shutter/AGC/SSDR/SSNR/COLOR are reset to the default value for each model.
- The “Camera Setting” value does not change between presets.
To Set the Sensor
It specifies how many frames the camera CMOS sensor will capture per second.
1. Select <Sensor>.
2. Select <Mode>.

Refer to “Video profile” for the framerate setup range of the <Video profile> according to mode setup. (Page 29)

To Set SSDR
In a scene where the difference between bright and dark is severe, you can increase the brightness of the dark area alone to regulate the overall brightness.
1. Select <SSDR>.
2. Set the SSDR use option to <Enable>.
3. Configure the <Level> and <D-Range> settings as necessary.
   - Level : Adjust the level of the dynamic range.
   - D-Range : Select the amplitude area of the dynamic range.

To Set White Balance
You can correct the image colors based on white under any lighting conditions.
1. Select <White balance>.
2. Select <Mode>.
   - ATW : Corrects the colors of the camera video automatically.
   - Manual : You can adjust the red and blue gains of the camera video manually.
   - Outdoor : Automatically corrects the video colors of the camera to be optimized to the outdoor environment.
   - Indoor : Automatically corrects the video colors of the camera to be optimized to the indoor environment.
   - AWC : Corrects the colors of the camera video to be optimized to the current lighting condition and screen mode.

To obtain the optimal condition for the current lighting, put the focus of the camera to a white paper and press the [Set] button. If the lighting environment is changed, you should readjust the settings accordingly.

In AWC mode, click the [Set] button if you want to keep the white balance level of the current image.

The white balancing may not work properly in the following conditions:
If this is the case, switch to AWC mode.
   - If the surrounding condition of the object is out of the temperature correction range ex) Clear sky, sunset
   - If the surrounding of the object is dark
   - If the focus of the camera directly faces the fluorescent lighting or if the camera is installed in a place of variable illumination, the white balancing operation may be unstable.

To Set BLC
You can specify a desired area on the video manually and set the area to be displayed more clearly.
1. Select <Backlight>.
2. Set <Mode> to <BLC>.
3. Set <BLC level>.

When setting BLC, a green box is displayed on the screen for 15 seconds.
To prevent malfunction at the time of BLC setup, the vertical space of the BLC area should be over 40 and below 60 while the horizontal space over 30 and below 60.

HLC (Highlight Compensation) Setup
If a strong light like a streetlamp or vehicle headlight points toward the camera, the area can be set to be cut off to prevent a saturated area on the monitor.
1. Select <Backlight>.
2. Set <Mode> to <HLC>.
   - HLC level : This adjusts the brightness level to cut off the highlighted area.
   - Mask
     - Off : Does not block an area with a brightness that is a certain level or higher.
     - On : Always blocks an area with a brightness that is a certain level or higher.
     - Night only : No blocked area is generated if the surrounding environment becomes dark to a certain level.
     - All day : No blocked area is generated if the surrounding environment becomes dark or bright to a certain level.
   - Mask color : You can select the color of the blocked area.
   - Mask tone : You can adjust the brightness of the color in the blocked area.
   - Dimming : Detects an area on the screen with strong light, and adjusts the brightness and reduces the saturated area.

3. Set the <Top, Bottom, Left, Right> levels to specify the target area.

When setting HLC, a green box is displayed on the screen for 15 seconds.
To prevent malfunction at the time of HLC setup, the vertical space of the HLC area should be over 40 and below 60 while the horizontal space over 30 and below 60.

At night operation, this function will be activated only if the incoming highlight exceeds a certain area in a low contrast environment.
At night operation, HLC will not function in too a bright or too a dark scene.
During daytime operation, HLC will not work in dark condition.
To Set WDR
It displays a sharp image of the objects in a scene where both bright and dark areas exist.

1. Select <Backlight>.
2. Set <Mode> to <WDR>.
3. Select each item and set it properly.
   - WDR level : Adjusts the intensity of backlight compensation.
   - Auto : Detects the surrounding environment and automatically uses backlight compensation.
   - Turn off in low light : Does not use automatic backlight compensation when detecting a dark environment.
   - Turn off in B/W : Does not use backlight compensation when switching to B/W mode.

   It is recommended to use WDR in the indoor environment.
   - Noise may exist between the dark area and the bright area in the WDR mode.
   - With WDR mode On or Off, the minimum, maximum and user-preferred shutter value will be reset.
   - If you use the P aperture lens manually or a shaking preventive shutter, the WDR performance is partially limited.
   - In WDR mode, noise may occur in the motion area.

   The image exposure can be saturated depending on the Shutter setup range.
   - It may take some time from the point when you enable the WiseNR mode to the point when the effect is actually applied/released.
   - When the WiseNR mode is enabled, the identifiability of the video will be improved, but the noise may be increased as well.
   - In a bright environment with less noise, WiseNR may not be so effective.
   - With intelligent NR enabled, the motion detection in the video will be performed according to the operation conditions of the motion detection event, as motion detection uses the motion detection function internally. For more information, please refer to “Motion detection” (page 45).

To Set Exposure
You can adjust the exposure level of the camera.

1. Select <Exposure>.
2. Select each item and set it properly.
   - Brightness : Adjust the screen brightness.
   - Minimum shutter : The limit of the longest exposure time.
     - Shutter is the mode to set up the range of the sensor exposure time which will specify the upper and lower limits for the electronic shutter movement.
     - The framerate may be reduced in the dark condition if Shutter has a lower value than specified in the Sensor mode.
   - Maximum shutter : The limit of the shortest exposure time.
   - Prefer shutter : Sets an appropriate exposure duration that is preferentially applied within the exposure duration range.
   - Anti flicker : Prevents screen flickering incurring from the dissonance between the surrounding lighting and the frequency.
   - SSNR : Adjusts the 2DNR level.
     - 2DNR : A method of reducing the noise by using the adjacent pixel information on a single video frame.
       - If you increase the level, the noise will be reduced but the video may be blurred.
     - SSNR 3D Level : Adjusts the 3DNR level.
       - 3DNR : A method of reducing the noise by using multiple video frames.
       - If you increase the level, the noise will be reduced but the video may drag.
   - Iris : Select it to set the camera lens to auto or manual.
     - DC(Auto) : The iris is automatically adjusted to the amount of the surrounding light.
     - Manual : Sets the iris F-No to manual.
   - Iris F-No : Set up the F value of the iris.
   - AGC : Select AGC Control mode.
     - Adjust the gain value of the video (that, in particular, was recorded at a low contrast scene and had a lower brightness level than normal) to control the video brightness.

   The image exposure can be saturated depending on the Shutter setup range.
   - It may take some time from the point when you enable the WiseNR mode to the point when the effect is actually applied/released.
   - When the WiseNR mode is enabled, the identifiability of the video will be improved, but the noise may be increased as well.
   - In a bright environment with less noise, WiseNR may not be so effective.
   - With intelligent NR enabled, the motion detection in the video will be performed according to the operation conditions of the motion detection event, as motion detection uses the motion detection function internally. For more information, please refer to “Motion detection” (page 45).

To Set Day/Night
1. Select <Day/Night>.
2. Select each item and set it properly.
   - Mode : Mode is used to adjust the color of Color or Black and White.
     - Color : The video is always output in color.
     - B/W : The video is always output in black and white.
     - Auto : Normally, it is set to Color but to B&W under low luminance at night.
     - Schedule : Set the time during which the camera is operated in the color mode.
• Dwell Time: It specifies the period for which the selected brightness condition must be maintained to switch the lighting mode from Day to Night or vice versa.
• Duration: It specifies the interval of lighting mode conversion.
• Alarm input: The video is set to Color or B/W as the alarm sensor is open or closed.
  - If the Day/Night mode is set to External Input, the alarm input function of the Event-Alarm Input page is disabled.
• Activation time (Color): It specifies the schedule for color mode operation.
  - If it is set, the Color mode is maintained from 00 second of the starting time to 59 second of the ending time.

![Warning] When you switch to day/night mode, motion detection mode does not work.

To Setup Special
1. Select <Special>.
2. Select each item and set it properly.
   • DIS: Compensates the image automatically when it is seen to shake for stable image output.
     - Mitigate the degree of image vibration when the camera vibrates due to the external factors such as wind.
   - In the following cases, DIS is not available to use.
     - When using tempering event
     - When using motion detection event
     - When using IVA event
   • Sharpness: Adjust the overall sharpness of the image.
     - If selecting <On>, you can adjust the sharpness of the image.
   • Sharpness level: The higher the level is, the sharper and clearer the outline of the image becomes.
   • Gamma: Adjust the contrast of the image.
   • Contrast: Adjusts the strength of video color.
   • Color level: Adjust the strength of video color.
   • Defog: Compensate the video in the foggy or cloudy weather.
     - It is set to <Off> as a default. Specials are used when the video looks blurry in the foggy weather.
       - Off: Disable the fog elimination function.
       - Auto: The image is automatically compensated according to the foggy level. Adjust <Defog level> to be more effective.
       - Manual: The user manually sets the amount of compensation for each image.
   ![Warning] If the defog mode is set to <Auto>, the performance is proportional to the fog level. To keep the set defog level without regard to the fog level, set the defog mode to <Manual>.
   - If the manual defog level is high in a thin fog, the image may become too dark.
   • Defog level: Control the defog level.
   • LDC: Sets whether to use image distortion correction.
   • LDC level: Adjusts the level of distortion correction.

To Set OSD
1. Select <OSD>.
2. Select each item and set it properly.
   • Camera title: It specifies the name of the camera to be displayed on the screen.
     - Select the <Use> check box to add a camera name.
       - Add: Click the <Add> button and you can add a total of 5 lines, 17 characters per line and a total of 85 characters.
       - Preview: Click the <Preview> button to check the name of camera that will be displayed on the screen.
   • Camera title X, Y: It specifies the position of the camera name on the screen.
   • Date & time: Set the time display and date formats on the screen.
   • Date & Time X, Y: Specify the position of time display on the screen.
   • Weekday overlay: Specify the use of date display on the screen.
   • Size: Sets the size of OSD to small/medium/large.
   • Color: Sets the color of the OSD to white/red/blue/green/black/gray.
   • Transparency: Sets the transparency of OSD to opaque / low / middle / high.
   ![Warning] A position-adjustable item (Camera title, Date & Time) may not be displayed normally if it overlaps with another fixed OSD item.
   - Multilingual other than English: Input only in the selected language is available.
**Smart codec**

Set a desired area of the video incoming from the camera as ROI area and specify the detection sensitivity for the area.

1. From the Setup menu, select the `<Video & Audio ( ))>` tab.
2. Click `<Smart codec>`.
3. Select a channel to set the item to.
4. Set the image quality.
   - The ROI area will be displayed in the specified quality.
5. Specify an area of interest to monitor manually.
   - You can specify up to 5 distinct areas.
6. Select a desired area with the mouse pointer, and drag it as much as you want.
7. To cancel all the settings for the area, click the `[Clear]` button.
8. When done, click `[Apply]`.

- The Smart codec will not be active if it is set to `<Off>` in `<Video profile>`. (page 29)

**Focus setup**

You can adjust the focus and zoom ratio of video image.

1. From the Setup menu, select the `<Video & Audio ( ))>` tab.
2. Click `<Focus setup>`.
3. Select a channel to set the item to.
4. Set the focus according to the following procedures.
   1) Reset : Click the `[Reset]` button.
   2) Focus (lens adjustment) : Adjusts the lens focus (Far ↔ Near) and sharpens the image.
   3) Zoom (lens adjustment) : Manually adjusts the magnifications (Wide ↔ Tele).
   4) Simple focus : Drags the mouse on the screen to designate a position on which to set the auto focus.
      - Press the `[ ]` button to automatically focus the video.

- The Simple focus mode may not fit correctly in the following cases:
  - Sudden change to the object in Simple focus mode (sudden movement, appearance or disappearance)
  - Radical change to the brightness in Simple focus mode
  - Image of a low contrast
  - If the camera is exposed to a strong light source in the front or surroundings
  - In case the focus is inappropriate apart from mentioned above, use `[ , , , , , , ]` button to manually adjust the focus.
  - In a situation where Simple focus is hardly applied, try to use the manual focus mode.

**WiseStream**

This is the feature that optimizes the size of the video data by reducing the bit rate through increasing the compression of the parts where there is no movement after detecting the complexity in the image.

1. From the Setup menu, select the `<Video & Audio ( ))>` tab.
2. Click `<WiseStream>`.
3. Select a channel to set the item to.
4. Select wise stream mode.
   - Off : Wise Stream function will be disabled.
   - Low – High : use the wise stream to select the bit rate reduction level.
5. When done, click `[Apply]`.

- In the following cases, the WiseStream function may malfunction.
  - Sudden screen switch may cause distortion of the video.
  - It is not appropriate to use in an environment with too much movement and motion on the screen.
DDNS

DDNS is an abbreviation of Dynamic Domain Name Service that converts the IP address of a camera into a general Host Name so that the user can easily remember it.

1. You can use the DDNS service only if the internet is connected.

1. From the Setup menu, select the <Network ( espanol)> tab.
2. Click <DDNS>.
3. Select the <DDNS> connection type.
4. Type in the DDNS items according to the selected type.
   - Wisenet DDNS : Select this if you use the DDNS server provided by Hanwha Techwin.
     - Product ID : Enter the product ID that is registered with the Wisenet DDNS service.
     - Quick connect : It sets port forwarding automatically when used with a UPnP (Universal Plug and Play) supporting router.
     - If you want to use the DDNS service without using a hub that supports the UPnP function, click Quick connect, then go to the hub menu and activate port forwarding for your hub. For more on how to set port forwarding for your hub, refer to "Port Range Forward (Port Mapping) Setup". (page 21)
   - Public DDNS : Select one of provided public DDNS servers when you use a public DDNS server.
     - Service : Select desired public DDNS service server.
     - Host name : Enter the name of the host that is registered with the DDNS server.
     - User name : Enter the user name for the DDNS service.
     - Password : Enter the password for the DDNS service.
5. When done, click [Apply].

Registering with DDNS

To register your product with the Wisenet DDNS

1. Visit the Wisenet DDNS web site (http://ddns.hanwha-security.com) and sign in with a registered account.
2. From the top menu bar, select <MY DDNS>.
3. Click the [Register Product] tab.
4. Enter the product ID.
5. Select a <Type> and specify the <Model>.
6. Specify the product location with a description if necessary.
7. Click [Product Registration].
The product will be added to the product list that you can check.
To connect to the Wisenet DDNS in camera setup

1. From the DDNS setup page, set <DDNS> to <Wisenet DDNS>.
2. Provide the <Product ID> that you registered product ID with the DDNS site.
3. Click [Apply].

When the connection is successfully made, you will see the message of <(Success)> on the screen.

Configuring public DDNS in Camera Settings

1. Open the DDNS settings page and select <Public DDNS> for <DDNS>.
2. Enter the corresponding site’s host name, user name and password.
3. Click [Apply] button.

If the connection properly establishes, <(Success)> appears.

4. When done, click [Apply].

- To use DDNS service properly, both DDNS setup and the router's port forwarding setup are required.
- For port forwarding setup, refer to “Port Range Forward (Port Mapping) Setup”. (page 21)

IP filtering

You can create a list of IPs that you want to grant or deny access to them.

1. From the Setup menu, select the <Network ( )> tab.
2. Click <IP filtering>.
3. Select <Filtering type>.
   - Deny registered IP : If selecting this, access from those IPs that are added to the filtering will be restricted.
   - Allow registered IP : If selecting this, access from only those IPs that are added to the filtering will be accepted.
4. Click the [Add] button.

The IP list will be created.
5. Provide the IP that you want to grant or deny access from.

When you enter an IP address and a Prefix, the list of IP addresses available will appear in the right-side filter range column.

HTTP

You can select a secure connection system or install the public certificate for this purpose.

1. From the Setup menu, select the <Network ( )> tab.
2. Click <HTTPS>.
3. Select a secure connection system.
   - To access the camera using HTTPS mode, you have to type the IP address for the camera in the form of "https://<Camera_IP>".
   - If you failed to configure the Web viewer settings in HTTPS mode with Internet Explorer, edit the Internet options as follows: <Menu > Tools -> Internet Options -> Advanced -> Security -> Uncheck TLS 1.0, and check TLS 1.1, TLS 1.2>
4. Search for the public certificate that you want to install on the camera.

To install the certificate on the camera, you need to provide a certificate name (it can be arbitrarily assigned by the user), certificate file issued from the certification authority and a key file.
   - The <HTTPS (Secure connection mode using the public certificate)> item will be active only if there exists a public certificate installed.
5. When done, click [Apply].

Installing the certificate

1. Enter the certificate name.
2. Click the [Browse ( )] button, select the public certificate file and key file to be installed, and then click the [Install] button.

Deleting the certificate

1. Click [Delete] button.
2. To delete a public certificate, you should access the network video decoder in the mode of <HTTP (Do not use secure connection)> or <HTTPS (Secure connection mode using a unique certificate)>.
802.1x
When connecting network, you can choose whether using 802.1x protocol, and then install the certification.

1. From the Setup menu, select the **Network ( )** tab.
2. Click **802.1x**.
3. Set the **IEEE 802.1x setting**.
   - IEEE 802.1x : Specify the use of the 802.1x protocol.
   - EAP type : Select EAP-TLS or LEAP.
   - EAPOL version : Select version 1 or 2.
   - ID : Enter the client certificate ID in EAP-TLS and the user ID in LEAP.
   - Password : Enter the client private key password in EAP-TLS and the user password in LEAP. You do not have to enter the password in EAP-TLS if it uses a key file that is not encrypted.

4. If the connected network device does not support the 802.1x protocol, the protocol will not operate properly even if you set it.
   - LEAP is an authentication method with poor security. Use it only in an environment where EAP-TLS is not available.
5. When done, click **Apply**.

**To install/remove 802.1x related certificates**

1. Press the **Browse ( )** button for each item and select a certificate to install.
2. If no certificate is installed, you will see “Not Available” appearing next to the selected item.
3. Press the **Install** button to start installation with a message of “Installed” next to the item.
4. Press the **Delete** button to remove the certificate.

QoS
You can specify the priority to secure a stable transfer rate for a specific IP.

1. From the Setup menu, select the **Network ( )** tab.
2. Click **QoS**.
3. Click the [Add] button.
4. Enter an IP address to which you will apply QoS.

5. Select an IP to delete from the list.
   - Click the [Delete] button.
6. When done, click [Apply].

**SNMP**
With the SNMP protocols, the system or network admin can monitor the network devices on a remote site, and configure the environment settings.

1. From the Setup menu, select the **Network ( )** tab.
2. Click **SNMP**.
3. Specify the **SNMP**.
   - Enable SNMP v1 : SNMP version 1 will be active.
   - Enable SNMP v2c : SNMP version 2 will be active.
     - Read community : Provide the name of the read community where you can access to the SNMP information. The default name is **public**.
     - Write community : Provide the name of the write community where you can access to the SNMP information. The default name is **write**.
   - Enable SNMP v3 : SNMP version 3 will be active.
     - Password : Specify the default password for SNMP version 3. The default password can be exposed to a hacking thread so it is recommended to change the password after installing the product. Note that the security and other related issues caused by the unchanged password shall be responsible for the user.
     - Password should be longer than 8 characters, no more than 16 characters.
**Enable SNMP Trap**
- Community: Enter the trap community name to receive messages.
- IP address: Enter the IP address to which messages will be sent.
- Authentication failure notification: It specifies whether an event shall be generated when the community information is invalid.
- Network connection notification: It specifies whether an event shall be generated when the network disconnection is restored.

4. When done, click [Apply].

- SNMP v3 is only able to be set when the secure connection mode is HTTPS. Refer to "HTTPS". (page 40)
- If you don’t use SNMP v3, there may be a security issue.

**Auto IP configure**
You can set the IP available for access and camera searching automatically.

1. From the Setup menu, select the <Network ( )> tab.
2. Click <Auto IP configure>.
3. Set the <Link-Local IPv4 address>.
   - Auto configure: It specifies Able or Disable for the Link-Local IPv4 address.
   - IP address: Display the assigned IP address.
   - Subnet mask: Display the subnet mask of the assigned IP.
4. Set the <UPnP discovery>.
   - UPnP discovery: It specifies Able or Disable for UPnP Discovery.
   - Friendly name: Display the camera name. Friendly name is displayed in the format of WISENET-<Model Name>-<MAC Address>.
5. Set the <Bonjour>.
   - Bonjour: It specifies Able or Disable for Bonjour.
   - Friendly name: Display the camera name. Friendly name is displayed in the format of WISENET-<Model Name>-<MAC Address>.

- In the Windows operating system which basically supports UPnP, the cameras connected to the network are displayed.
- In the Mac operating system, which support Bonjour by default, the connected cameras are automatically displayed in the Bonjour bookmark of the Safari web browser.

6. When done, click [Apply].

**EVENT SETUP**

**Event setup**
You can easily set the event detection items, and move to the detailed setting.

1. From the Setup menu, select the <Event ( )> tab.
2. Click <Event setup>.
3. Activate desired items on the Event list.
4. When done, click [Apply].

- To configure detailed event settings, click a desired type. You will be redirected to the detailed settings.

**FTP / E-mail**
You can configure the FTP/E-mail server settings so that you can transfer the images taken with camera to your PC if an event occurs.

1. From the Setup menu, select the <Event ( )> tab.
2. Click <FTP / E-mail>.
3. Select <FTP configuration> or <E-mail configuration> and enter / select a desired value.
   - FTP configuration
     - Server address: Enter the IP address of the FTP server that you transfer the alarm or event images to.
     - ID: Enter the user ID with which you will log in to the FTP server.
     - Password: Enter the user account password for logging into the FTP server.
     - Upload directory: Specify the FTP path where you will transfer the alarm or event images.
     - Port: The default port of the FTP server is 21; however, you can use a different port number according to the FTP server settings.
     - Passive mode: Select <On> if you need to connect in passive mode due to the firewall or the FTP server settings.

- In the Windows operating system which basically supports UPnP, the cameras connected to the network are displayed.
- E-mail configuration
  - Server address : Enter the SMTP address of the email server that you transfer the alarm or event images to.
  - Authentication : Select whether to use authorization.
  - TLS : Specify the use of TLS.
  - ID : Enter the user ID for logging into the email server.
  - Password : Enter the user account password for logging into the email server.
  - Port : The default port of the email server is 25; however, you can use a different port number according to the email server settings.
  - Recipient : Enter the address of the email recipient.
  - Sender : Enter the address of the email sender. If the sender address is incorrect, the email from the sender may be classified as SPAM by the email server and thus may not be sent.
  - Subject : Enter a subject for your email.
  - Body : Provide the text for the massage. Attach the alarm or event images to the email that you are preparing.

4. When done, click [Apply].
   
5. Depending on SMTP server, may not be able to receive e-mail.

**Storage**

You can activate recording on your device, set the recording conditions, check the saved data capacity and format the device itself.

1. From the Setup menu, select the <Event ( ))> tab.
2. Click <Storage>.
3. Set the SD card unit to <On>.
4. Click the [Apply] button.
   
5. Changes the storage items for all channels (CH1 to CH4).
   
   If you click [Info], you can view the detailed storage information of CH1 - CH4.
6. Check the memory card’s <Free size> and <Total size>.
   
   You can format the Micro SD card by clicking the <Format> button.
   
   Some frames may be skipped if the Micro SD memory card operates at the lower speed than recommended.
   
   For more details, refer to “Recommended Micro SD/SDHC/SDXC Memory Card Specifications”. (Page 6)
   
   For a Micro SD memory card with a large capacity, the formatting will be slowed down accordingly.
   
   The data traffic will increase when the camera is set to higher resolution, higher bit rate, and/or higher framerate.
   
   If there is too much data traffic, some frame may be skipped although it is stored in a full frame.
   
   When a frame skip occurs, images are saved at the rate of min. one image per sec.

6. Specify the storage action.
   
   - Overwrite : If the Micro SD memory is full, this will delete old data and store new data in replacement.
   
   - Auto delete : Data for a certain period is deleted, while other data is not deleted.
   
   This can be set within the range of one day to 180 days.
   
   If the storage period is expired, data is automatically deleted and new data will be recorded. Once deleted, it cannot be recovered.

7. Set <SD File System>.
   
   - Type : Camera supports VFAT and ext4 as an SD card file system, which can be configured by the user.
     (However, in case of ext4 file system, an additional application is required to recognize the Windows operating system)
   
     If the settings are changed, the existing data will be formatted.
   
     It may take up to 10 minutes to format an SD card in the ext4 file system.

8. Selects the channel and set items.
   
   - Record profile : The name of profile to be recorded is displayed.
   
   - Normal recording : Make recording at a certain frame rate.
   
   - Event recording : Set the recording type for a certain event that occurs.
   
   - Pre event duration : Specify the time point before the occurrence of the alarm; starting from the time point, the images will be transferred. You can specify up to 5 seconds before the occurrence of the alarm.
   
   - Post event duration : Specify the time point after the occurrence of the alarm; to the specified time point, the images will be transferred. You can specify up to 120 seconds after the occurrence of the alarm.
   
   - Record file type : It specifies the file format of the recorded images.
     - STW : It is Hanwha Techwin’s unique file format.
     - AVI : It is the conventional avi format.
   
   If the Record file type is changed, the existing data is formatted.

9. Specify the <Normal record schedule>.
   
   - Always : Always save recorded video in the Micro SD memory card.
   
     If set to Always, the activation time cannot be changed.
   
   - Only scheduled time : Records only on the specified time of the specified day of week.

10. When done, click [Apply].
### Alarm input

You can set the alarm input type, activation time, and operation mode.

1. From the Setup menu, select the `<Event (K)>` tab.
2. Click `<Alarm input>`.
3. Set whether or not to `<Enable>`.
4. Select the type.
   - N.O. (Normal Open) : It is normally open, but if it is closed, an alarm will be triggered.
   - If set to `<Always>`, the activation time cannot be changed.
   - Only scheduled time : Check if an alarm occurs at a specified day of the week for a specified time period. It activates in operated mode when the alarm occurs.
5. Specify the `<Event activation time>`.
   - Always : Always check if an alarm occurs. It activates in operated mode when the alarm occurs.
   - Only scheduled time : Check if an alarm occurs at a specified day of the week for a specified time period. It activates in operated mode when the alarm occurs.
6. Specify an operation that will perform if an alarm occurs.
   - FTP : Specify the use of FTP transfer in the alarm input setup.
     - Refer to "FTP / E-mail" for more details. (page 42)
   - E-mail : Specify the use of email transfer in the alarm input setup.
     - Refer to "FTP / E-mail" for more details. (page 42)
   - Record : You can set up the alarm to record to a Micro SD card when operating.
     - Set `<Device>` to `<On>` in `<Storage>`.(page 43)
   - Alarm output1 : Select whether to set the alarm output if an alarm is incoming, and specify the alarm output time.
7. When done, click `<Apply>`.
**Time schedule**

You can configure settings to transmit images at regular intervals at a scheduled operation time regardless of the occurrence of an event.

1. From the Setup menu, select the **<Event (_event)>** tab.
2. Click **<Time schedule>**.
3. Set whether or not to **<Enable>**.
4. Specify the **<Transfer interval>**.
5. Specify the **<Event activation time>**.
   - **Always** : Always activates in operated mode at the set interval.
   - **Only scheduled time** : Periodically activates in operated mode at a specified time and date.

1. The transfer interval setting value must be smaller than the preset activation interval to succeed in image transmission.

6. Specify the activation conditions.
   - **FTP** : Specify the use of the FTP transfer if an event occurs.
     - Refer to "FTP / E-mail" for more details. (page 42)
7. When done, click [Apply].

**Network disconnection**

When the network is physically disconnected, it is considered as an event to be saved.

1. From the Setup menu, select the **<Event (_event)>** tab.
2. Click **<Network disconnection>**.
3. Set whether or not to **<Enable>**.
4. Configure the event motion schedule and event motion conditions.
   - For more information about **<Event activation time>** and **<Event action settings>**, refer to "Alarm input". (page 44)
5. When done, click [Apply].

**CONFIGURE ANALYSIS SETTINGS**

**Motion detection**

You can configure settings to generate an event signal when a motion is detected.

1. From the Setup menu, select the **<Analytics (analytics)>** tab.
2. Click **<Motion detection>**.
3. Select a channel to set the item to.
4. Set whether or not to **<Enable Motion detection>**.
5. Set an **<Area>** and **<Exclude area>**.
   - **Area** : The event signal can be generated if any motion is detected in the area where polygon is set up.
   - **Excluded area** : The event signal can be generated if any motion is detected outside of the area where polygon is set up.
     - A single area supports a shape with up to 8 vertexes.
     - Select 4 vertexes on the video using the mouse to create a rectangle, and select each line of the rectangle and add up to 4 more points to create a desired shape.
     - You can set up to 8 areas.
     - You can specify level and sensitivity settings separately for each area.
6. Configure settings for each item.
   - **Level of detection** : If the motion is greater than the level configured, a motion detection event is generated.
     - Even on the chart, if the motion is greater than the boundary of the level configured, the color is displayed differently.
   - **Sensitivity** : Sets the sensitivity of motion detection for each area.
     - Decrease the sensitivity in an environment where the background and the object are clearly distinguished, and increase the sensitivity in a dark environment where the background and the object cannot be clearly distinguished.
7. Configure the event motion schedule and event motion conditions.
   - For more information about **<Event activation time>** and **<Event action settings>**, refer to "Alarm input". (page 44)
8. When done, click [Apply].
Detected size of an object may have difference with the actual size according to its shape.

In the following cases, motion detection performance may be impaired or a malfunction may occur.

- The object color or brightness is similar to the background.
- Small activities around the border area of the camera's field of view.
- Multiple movements continue occurring at random due to a scene change, rapid lighting changes or other reasons.
- A fixed object continues moving in the same position.
- Motions of less position changing such as approaching to the camera or fading away from the camera.
- Moving object approaches to the camera too close
- An object hides other objects behind.
- Too fast object (for a proper detection, one object should be found overlapping between contiguous frames).
- Reflection / blur / shadow due to a strong light such as direct sunlight, illumination, or headlamp.
- In severe snow, rain, wind or in dusk.

Tampering detection

You can set to detect tampering attempts and trigger events, such as sudden change of camera's framing direction, blocked lens and other overall change of scenes from the video.

1. From the Setup menu, select the <Analytics ( )>-tab.
2. Click <Tampering detection>.
3. Select a channel to set the item to.
4. Set whether or not to <Enable Tampering detection>.
5. The chart represents the degree of tempering. Set the level sensitivity of tampering to detect (ranges: 1 to 100).
6. Set the sensitivity.
   The higher the set value, the more sensitive the camera reaction (range: 1 to 100).
7. Specify the minimum monitoring duration.
   An event signal is generated if a state higher than the detection level remains for the minimum monitoring duration (unit: seconds)
8. Specify whether to exclude dark areas.
   This function makes it difficult to distinguish darkness due to de-illumination from darkness due to being blocked by an object. Despite this property, if you want to exclude an alarm for sudden changes in screen brightness such as de-illumination, you should enable this function.
9. Configure the event motion schedule and event motion conditions.
   For more information about <Event activation time> and <Event action settings>, refer to “Alarm input”. (page 44)
10. When done, click [Apply].

Defocus detection

You can configure settings to generate an alarm signal when a defocus of the camera lens is detected.

1. From the Setup menu, select the <Analytics ( )>-tab.
2. Click <Defocus detection>-.
3. Select a channel to set the item to.
4. Set whether or not to <Enable Defocus detection>.
5. Configure settings for each item.
   - Level of detection : An alarm is generated if the current level is higher than the detection level configured.
   - Sensitivity : The higher the intensity is, the higher the level of the chart that is output for the same video.
   - Minimum duration(s) : An alarm is generated if the level state higher than the detection level remains continuously for the minimum monitoring duration configured.
6. Configure the event motion schedule and event motion conditions.
   - Simple focus : Selects whether to perform simple focus when defocus is detected.
   - For more information about <Event activation time> and <Event action settings>, refer to “Alarm input”. (page 44)
7. When done, click [Apply].

- The detection will be restarted after stabilization for a certain period of time (about 5 seconds). During stabilization, detection is not available.
- If false alarms are frequently generated, you should gradually decrease the sensitivity to minimize false alarms.
- If you use a low sensitivity, alarms may be generated even by very small changes on the screen, but false detection may occur in response to changes in moving objects or brightness.
- In the following cases, the tempering detection function may malfunction.
  - Monitoring environment with simple background, night and low light level environment.
  - Severe camera vibration or sudden lighting changes

- In severe snow, rain, wind or in dusk.
- Reflection / blur / shadow due to a strong light such as direct sunlight, illumination, or headlamp.
- Too fast object (for a proper detection, one object should be found overlapping between contiguous frames).
- Monotonous monitoring environment, night or low illumination environment
- Sudden changes in the illumination (e.g. indoor light shutting off)
- Lens blocked by a large object that covers almost all of the screen
- Changes the focus object by changing the camera position.

- Use Defocus Detection check box is deselected
- Video identification is available, as simple focus is activated
- If an object in the video moves to a position at which good focus is ensured and thus an identifiable tempering is detected

- A fixed object continues moving in the same position.
- Moving object approaches to the camera too close
- Too fast object (for a proper detection, one object should be found overlapping between contiguous frames).
- Reflection / blur / shadow due to a strong light such as direct sunlight, illumination, or headlamp.
- In severe snow, rain, wind or in dusk.
Fog detection
You can configure settings to generate an event signal when fog is detected.

1. From the Setup menu, select the <Analytics ( )> tab.
2. Click <Fog detection>.
3. Select a channel to set the item to.
4. Set whether or not to <Enable Fog detection>.
5. Configure settings for each item.
   - Level of detection : An alarm is generated if the current level is higher than the detection level configured.
   - Sensitivity : The higher the intensity, the higher the level of the chart that is output for the same video.
   - Minimum duration (s) : An alarm is generated if the level state higher than the detection level remains continuously for the minimum monitoring duration configured.
6. Configure the event motion schedule and event motion conditions.
   - Defog : Specifies whether to use the fog removal function when fog is detected.
   - For more information about <Event activation time> and <Event action settings>, refer to “Alarm input”. (page 44)
7. When done, click [Apply].

   - After an alarm for the fog detection is generated, if you want to receive an alarm for fog detection again, you will need to return to a stable state at least once. Video improvement after fog removal is not recognized as a stable state. Examples of returning to a stable state are as follows.
     - Use Fog Detection check box is deselected.
     - Video is identifiable as fog or smoke disappears.
   - In the following cases, fog detection performance may be impaired or a malfunction may occur.
     - Monotonous monitoring environment, night or low illumination environment
     - Sudden changes in the illumination (e.g. indoor light shutting off)
     - Lens blocked by a large object that covers almost all of the screen
     - Changes the focus object by changing the camera position.

Face detection
You can configure the settings to generate an event signal in response to the detection of a face in the specified area.

1. From the Setup menu, select the <Analytics ( )> tab.
2. Click <Face detection>.
3. Select a channel to set the item to.
4. Set whether or not to <Enable Face detection>.
5. Set an <Area> and <Exclude area>.
   - Area : The event signal may occur if a face is detected in the area where a polygon is set up.
   - Excluded area : The event signal may occur if a face is detected outside the area where a polygon is set up.
6. Set the sensitivity level.
   - The higher the sensitivity, the more detailed and precise face detection is available.
7. Configure the event motion schedule and event motion conditions.
   - For more information about <Event activation time> and <Event action settings>, refer to “Alarm input”. (page 44)
8. When done, click [Apply].

   - In the following cases, face detection performance may be impaired or a malfunction may occur.
     - The angle or slope of the face is different from the imaging direction (e.g. handstand)
     - The person is wearing any accessories that cover the face such as glasses, sunglasses, hat or mask
     - The face is blurred as the camera is not focused
     - The face is not illuminated as the camera is not focused
     - At night or in a low luminance environment
     - The brightness of the face is abnormal due to the lighting direction such as backlight
IVA (Intelligent Video Analysis)
You can configure settings to generate an event signal when a motion or situation meeting the specified event rules is detected.

1. From the Setup menu, select the <Analytics ( [ ]) > tab.
2. Click <IVA>.
3. Select a channel to set the item to.
4. Set whether or not to <Enable IVA>.
5. Configure rules to detect. For more information about settings, refer to “Configure analysis rules”.

Configurable rules are as follows.
- Crossing: You can detect an object passing in the selected direction on a specified virtual line.
- Intrusion: You can detect the emergence of a moving object within a virtual area.
- Enter: Detects an object entering from the outside to the inside of the virtual area.
- Exit: Detects an object exiting from the inside to the outside of the virtual area.
- Appear(Disappear): Detects a new object appearing inside a virtual area, which is monitored for a specified period of time after its position is fixed, or detects a fixed object that disappears and is not monitored for the monitoring duration.
- Loitering: Detects an object wandering inside the virtual area for longer than the monitoring duration.

6. Select area(s) that you don’t want to include in the analysis, and excluded area(s).
7. Set the sensitivity level and a size of interest (if necessary).
   For more information about settings, refer to “Common Settings”.
8. Configure the event motion schedule and event motion conditions.
   - For more information about <Event activation time> and <Event action settings>, refer to “Alarm input”. (page 44)
9. When done, click [Apply].

Configure analysis rules
You can configure individual analysis rules as follows.

- Crossing
  1. Select the <Virtual line> tab.
  2. Left-click on the screen to specify the start and end of the line at a desired position to detect.
  3. Select a direction of interest.
  4. When done, click [Apply].
  5. To remove the rules that have been configured, right-click on the line and click the [OK] button in the pop-up window that appears.

- Intrusion, Enter, Exit, Appear(Disappear), Loitering
  1. Click on the <Virtual area> tab.
  2. One area can support a polygon with up to 8 vertexes.
  3. After creating a polygon by selecting 4 vertexes on the image, select each line of the already-made polygon, and you can add up to 4 more vertexes to make a desired polygon.
  4. From the virtual area that has been configured, select an analysis category.
  5. When done, click [Apply].
  6. To remove the rules that have been configured, right-click on the line and click the [OK] button in the pop-up window that appears.

Common settings
Common settings are settings to increase the detection accuracy and minimize false positives, based on the use environment.

- Sensitivity
  1. Select the <Common> tab.
  2. You can change the sensitivity of distinguishing the screen background from motions.
  3. For each rectangle that represents the minimum size and the maximum size, right-click on the vertex at the bottom-right to move and resize it.

- Size
  1. Select the <Common> tab.
  2. For each rectangle that represents the minimum size and the maximum size, right-click on the vertex at the bottom-right to move and resize it.
  3. When done, click [Apply].
**SYSTEM SETUP**

**Product information**

1. From the Setup menu, select the <System ( )> tab.
2. Click <Product information>.
3. Check the camera information, or provide details according to your network environment.
   - Model: Model name of the product.
   - Serial number: Product serial number.
   - Device name: Provide a device name that will be displayed on the Live screen.
   - Location: Specify the location where the camera is installed.
   - Description: Provide detailed information about the camera location.
   - Memo: Provide an explanation about the camera for better understanding.
   - Language: Select a preferred language for the Web Viewer OSD.
     - The default language is set to <English>.
4. When done, click [Apply].

**Upgrade / Restart**

1. From the Setup menu, select the <System ( )> tab.
2. Click <Upgrade / Restart>.
3. Select a desired item and set it appropriately.
   - Upgrade: Performs upgrading the system.
     - When reconnecting, the web viewer will not run normally if the browser cache is not completely clear.
   - Factory default: Initializes all setting information including the camera settings to the factory reset state. (however, logs are not initialized)
     - Select the <Except network parameter> checkbox to initialize all settings other than the network settings.
     - The IP addressing system will be defaulted to DHCP if you reset the camera. If no DHCP server is found, the previous settings will be restored automatically.
   - Configuration backup & Restore: Backs up the current system settings before performing the restoration process. The system is automatically restarts after backup or restoration.
   - Restart: Restarts the system.

**To perform the upgrade**

1. Click [Browse ( )] and specify a file to upgrade.
2. Click [Upgrade].
3. An “Upgrade” progress bar is prompted to show the upgrading status.
4. Once completed upgrading, the browser exits and the camera restarts.
   - It may take a max of 10 minutes for the upgrade process.
   - If you forcibly terminate the upgrade process, upgrade will not be completed properly.
   - During restarting the system, accessing with web viewer will not be made.
   - You can download the latest version from the Hanwha Techwin web site.

**To back up the current settings**

1. Click [Backup].
2. A file in a “.bin” file format is saved in “Library” -> “Document” -> “Downloads”.

**To restore the backup settings**

1. To restore the backup settings, click [Restore].
2. Select a desired backup file.
   - If you perform the backup or restoration, the web browser will be closed and the camera will reboots.
   - If you try to recover the config file backed up in other model, some functions may malfunction and you need to change the setting manually.
Log
You can check the system log or event log.

1. From the Setup menu, select the <System ( ))> tab.
2. Click <Log>.
3. Select a log type.
   - Access Log : You can check the log information that contains the user’s access and the access time.
   - System log : You can check the system logs where any system changes are recorded including the time information.
   - Event log : Select the channel for which you want to view the log. You can check the event logs including the time information.
4. From the right log list, select an item to search for.
   - If you select <All> in the top left dropdown list, all logs for the applicable log type will be displayed.
5. If one page cannot display all the logs available, use the bottom buttons to move to the previous, next, or the last item.
6. Click on the <Backup> button to save all the log data for the currently selected mode in the “time stamp value create by camera in modelname-mode-camera.txt file” in the download folder for the browser.

- Each page displays 15 logs with the latest one displayed at the top.
- Each log contains up to 1,000 records and after 1,000 records are saved, the oldest log is deleted when a new record is generated.

OPEN PLATFORM SETUP

Open Platform
A user can install an application on their camera to execute additional functions.

1. From the Setup menu, select the <Open Platform ( ))> tab.
2. Click <Open Platform>.
3. Click the [Browse ( ] button to select the *.cap file from the user folder.
4. Click the [Install] button to install your application.
5. The information of the installed application is displayed in the list.
   - Uninstall : Deletes installed or operating applications.
   - Go App : You will be redirected to the app page of each application.
   - Start : Execute an installed application.
   - Stop : Terminates a running application.
   - Health : Displays the currently running application’s resource occupation rate, thread counts and execution time, etc.
   - Priority : Sets the priority of running applications. If the total resource utilization rate of the camera (including main tasks and applications) exceeds 80%, an ongoing application will be forced to stop. In this case, the priority set by the user is used to determine which application should be stopped first.
   - Auto start : When the camera’s power supply or main task is running, a certain application for which auto execution has been activated will run automatically.
   - Application manager : This displays the resource occupation rate of an application currently running in your camera.
     - Memory Usage (%) : This is the memory utilization rate for each application.
     - CPU Usage (%) : This is the CPU utilization rate for each application.
     - Thread count : This is the number of threads created by each application.
     - Duration : This is the total execution time of each application.
     - Kill Task : Terminates an application.
     - Total Usage : This is the total resource occupation rate of the camera (including main tasks and applications).

- For questions about application use or installation, check the Techwin developer website.

## Troubleshooting

<table>
<thead>
<tr>
<th>Problem</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>When an Windows 10 user accesses the web viewer through Chrome or Firefox, the sound volume of microphone changes periodically.</td>
<td>• This is what happens when microphone driver has been set to Realtek driver. Install the High Definition Audio device (Windows Default Driver) or the third party driver as the microphone driver.</td>
</tr>
</tbody>
</table>
| No video is displayed when accessing the plug-in free webviewer on Safari via HTTPS. | • On the authentication popup window prompted when initially accessing https, click "View Authentication Certificate" and select the "Always trust when connecting to the designated webviewer IP" check box.  
  • If the webviewer continues failing to display a video after you select "Next" on the message window below, press the command key + Q to exit the Safari browser, access again and follow the procedures stated above. |
| I restarted the system, and I cannot see the video for some channels.   | • Restarting the camera system will restart four channels at the same time. Videos can be displayed sequentially. |
| I can’t access the camera from a web browser.                          | • Check to make sure that the camera’s Network settings are appropriate.  
  • Check to make sure that all network cables have been connected properly.  
  • If connected using DHCP, verify that the camera is able to acquire dynamic IP addresses without any problem.  
  • If the camera is connected to a Broadband Router, verify that port forwarding is properly configured. |
| Viewer got disconnected during monitoring.                             | • Connected Viewers become disconnected upon any change to camera or network configurations.  
  • Check all network connections.  
  • If the camera is connected over an PPPoE network, it’s possible for Viewer to disconnect under poor network conditions. |
| The camera connected to the network is not detected in the IP installer program. | • Turn off the firewall settings on your PC and then search the camera again. |
| Images overlap.                                                        | • Check whether two or more cameras are set to a single multicast address instead of different addresses. If a single address is used for multiple cameras, the images may overlap. |
| No image appears.                                                      | • If the transmission method is set to multicast, check whether there is a router that supports multicast in the LAN the camera is connected to. |

### <Motion detection> of <Analytics> is set to <Enable>, but no notification e-mail reaches me even when an analysis event had occurred.

- Verify the settings in the following sequence:
  A. Check <Data & Time> settings.
  B. The <Motion detection> should be set to <Enable>.
  C. Check if the <E-mail> option of <Event setup> menu is checked to use.

### No signal is found at the Alarm Output port even when an intelligent video analysis event is generated.

- Check alarm output port settings.

### Cannot record into the Micro SD memory card.

- Check if the memory card is defective.

### Micro SD memory card is inserted but the camera does not operate properly.

- Check if the memory card is inserted in the proper direction. Operation of memory card that is formatted by other devices is not guaranteed with this camera unit.  
  - Format the memory card again in <Setup> → <Event> → <Storage> menu.
OPEN SOURCE ANNOUNCEMENT

GPL/LGPL software license

The software included in this product contains copyrighted software that is licensed under the GPL/LGPL. You may obtain the complete Corresponding Source code from us for a period of three years after our last shipment of this product by sending email to help.cctv@hanwha.com

If you want to obtain the complete Corresponding Source code in the physical medium such as CD-ROM, the cost of physically performing source distribution might be charged.

You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works.

These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are responsible for ensuring compliance with the Licensor’s terms.

If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce or permit violation of applicable laws or standards of ethics. If you cannot choose which to do, you can the only choice is to cease activity involving the Program.

You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, distribute or create a derivative work of the Program is expressly forbidden. Under no circumstances may any part of the Program be distributed without using the GPL.

The corresponding source code for distributed program is the complete source code and documentation included within the distributed version, excluding any unlicensed add-on packages or libraries.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample ; after the names:

Yoyodec, Inc. hereby disclaims all copyright interest in the program "Gnomovision" which makes passes at compilers written by James Hacker, signature of Yoyodec, Inc.'s attorney. Ty Coon, President of Vice This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is Leibovitz you'd want to, use the GNU Lesser General Public instead of this License.

GNU GENERAL PUBLIC LICENSE
Version 3, 26 June 2007
Copyright (C) 2007 Free Software Foundation, Inc. <http://fsf.org>
Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

The GNU GENERAL PUBLIC LICENSE is a free, copyleft license for software and other kinds of works.

The General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software and use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to prevent others from denying you these rights or asking you to surrender the rights. Therefore, you have certain responsibilities if you distribute copies of the software, or if you modify it.

For example, if you distribute the software without permission of the copyright holder, you must also agree not to accept permissions for the work so granted. Also, if the program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library.

The GNU General Public License is a free, copyleft license for software and other kinds of works.

TERMS AND CONDITIONS
8. Definitions.

"This License" refers to version 3 of the GNU General Public License.

"Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks. "The Program" refers to any copyrighted work licensed under this License. "Licensee" means one who has received permissions under this License to copy, distribute and/or modify the Program.

"Modifying" means making the Program functional in a private, localized environment, in addition to those activities listed in section 1 above.

"Copying" means making copies of the Program in any form suitable for subsequent redistribution or reproduction by any other person.

"Original Author" means the initial author of the Program.

"You" (or "Your") refers to an individual or a legal entity acting on behalf of yourself, who has received a copy of the Program under this License.

"License" means this document or any other document that contains the same license.

"Corresponding Source" means the Corresponding Application Code and corresponding portions of the application source code. Corresponding application code shall mean the source code form of the corresponding applications.

"Application" means the executable form of executable code. An "application" includes any executable code generated by an interactive user interface from an executable program.

"Program" means the collection of source code, program documentation and corresponding application code. It also includes non-source code documentation that is distributed together with the source code.

"Run To Completion" means to execute a program from start to finish without being terminated by an external signal, interrupt or exception.

"Standard She shows the appropriate parts of the GNU Public License. Of course, the commands you use may be called something other than "show w" and "show c"; they could even be mouse-clicks or menu items—whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program if necessary. Here is a sample ; after the names:

Yoyodec, Inc. hereby disclaims all copyright interest in the program "Gnomovision" which makes passes at compilers written by James Hacker, signature of Yoyodec, Inc.'s attorney. Ty Coon, President of Vice This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is Leibovitz you'd want to, use the GNU Lesser General Public instead of this License.

GNU GENERAL PUBLIC LICENSE
Version 3, 26 June 2007
Copyright (C) 2007 Free Software Foundation, Inc. <http://fsf.org>
Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

The GNU GENERAL PUBLIC LICENSE is a free, copyleft license for software and other kinds of works. The licenses for most software and other practical works are designed to be effective in the most general of circumstances, without attempting to dictum or Hindes of software free distribution, which is implemented by public license practices. Many people have made generous contributions to the wide scope of software distributed through that system in reliance on consistent application of that principle. It is a measure of the system’s success that such contributions are relatively common and because many developers wish to use the same facilities for their own programs, we believe it is desirable to specify the right of anyone to use the Corresponding Source for the Corresponding Application Code under the same terms and conditions as govern the sale and distribution of a program by its publisher. This will assure that the Corresponding Source is available for the independent verification of software modifiability by interested users. The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source. The Corresponding Source includes the complete machine-readable source code of the Corresponding Application Code, accompanying documentation, and if appropriate, copyright notices.
2. Basic Permissions. All rights granted under this License are for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly authorizes your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License if only the output, and not the input, of the work is covered. However, the output must include the notice that this License applies to the output. You may make, run and propagate covered works without limitation and without conditions, as long as you do not modify them. You may create and propagate new versions of modified works under this License provided you also meet all of the other terms and conditions of this License. As long as you comply with this License, you may not place any additional restrictions on the work of others.

You may make, run and propagate covered works as you like, and you may modify them. A modification is any new version, adaptation, translation, or other form in which you alter in any way the material represented by your version. Covered works do not include instructions on how to modify the covered work. You may convey an object form of a covered work under the terms of section 4, provided that the conveyance meets the requirements of that section. You must provide a copy of this License or a reference to it with the covered work, and must give all recipients a copy of this License along with the Program. You may charge any price for such a conveyance, and you may propagate such a conveyance freely provided that you do not receive any compensation therefor. You may convey a covered work in any way you choose. You may not convey modified Source versions to the extent that doing so violates the license document for the modified versions.

2.1 Conveying Under Other Terms. You may convey or propagate a work so long as you do not remove or alter any provisions and restrictions from that work. Such terms can be stated in the form of a license document, which is a legal document selecting terms that apply to a particular version or work, or which applies to the work as a whole.

2.2 Conveying Under the License. You may convey a covered work under these terms if you meet all of the conditions specified in this section. If you modify a covered work, you may convey this modified work under the terms of subsections 2.1 and 2.2, provided that you also make the corresponding changes in each corresponding license document. You may convey an unmodified covered work under the terms of subsection 2.1, provided that you make the corresponding changes in each corresponding license document.

2.3 Protected User's Legal Rights From Anti-Circumvention Law. You must include the following notice on all conveyances of the Program.

"No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty as implemented through any national law.

4. Conveyance Modiied Source Versions. You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of the conditions stated in subsection 2.2.

5. Conveying Modified Work Source Versions. You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of the conditions stated in subsection 2.2.

6. Termination. You may not propagate or modify a covered work except as expressly provided under this License. Any attempt to do so will terminate your right under this License (including any patent licenses granted under the third paragraph of section 11).

7. Acceptance Not Required for Having Copies. You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, neither this License nor any further notice asserting that you must accept the License may be included on a covered work that you convey.

11. Patents. A "contributor," as used in this License, refers to any person or entity that makes a contribution to the work under the terms of this License. A "contributor's essential patent claims" are all patent claims owned or controlled by a contributor, whether before or after the date that this License was first made available.

Information for User Product means any methods, procedures, authorization keys, or other information used or needed to install, run, or propagate a covered work, and which are supplied specifically for this purpose, that comprise a significant part of the摸拟的输出。
The OpenSSL toolkit stays under a dual license, i.e. both the conditions of the OpenSSL License and the original SSLeay license apply to the toolkit.

Mozilla Public License

Since we, as Hanle Technix, used the Mozilla Firefox component without modifying the source code according to the Mozilla Public license 1.1, we are not obliged to provide the source code of the corresponding component.

- Version 1.1

1. Definitions.

1.0.1. "Commercial Use" means distribution or otherwise making the Covered Code available to a third party.

1.1. "Contributor" means each entity that creates or contributes to the creation of Modifications.

1.2. "Contributor Version" means the combination of the Original Code, prior Modifications made by a particular Contributor.

1.3. "Covered Code" means the Original Code or Modifications or the combination of the Original Code and Modifications, in each case including portions thereof.

1.4. "Electronic Distribution Mechanism" means a mechanism generally accepted in the software development community for the electronic transfer of data.

1.6. "Initial Developer" means the individual or entity identified as the Initial Developer in the Source Code notice required by Exhibit A.

1.7. "Large Work" means a work which combines Covered Code or portions thereof with code not governed by the terms of this License.

1.8. "License" means this document.

1.8.1. "Licensable" means having the right to grant, to the maximum extent possible, whether at the time of the initial grant or subsequently acquired, any and all of the rights conveyed herein.

1.9. "Modifications" means any addition to or deletion from the substance or structure of either the Original Code or any previous Modifications.

1.10. "Original Code" means Source Code of computer software code which is described in the Source Code notice required by Exhibit A as Original Code, and which, at the time of its release under this License is not already Covered Code governed by this License.

1.10.1. "Patent Claims" means any patent claim(s), now owned or hereafter acquired, including without limitation, method, process, and apparatus claims, in any patent Licensable by grantor.

The rights conveyed herein include:

- The right to make, use, sell, offer for sale, import, and otherwise dispose of or exercise any rights regarding the Covered Code, if any are Licensable, without restriction including, without limitation, the right to sublicense the Covered Code and have it sublicense such Covered Code.

- If the Covered Code includes an约定 ("Conditional") Covered Code, the right to make, use, sell, offer for sale, import, and otherwise dispose of or exercise any rights in the Original Code, if any are Licensable, without restriction including, without limitation, the right to sublicense the Original Code and have it sublicense such Original Code.

- The right to make, use, sell, offer for sale, import, and otherwise dispose of or exercise any rights in the Modifications, if any are Licensable, without restriction including, without limitation, the right to sublicense the Modifications and have it sublicense such Modifications.

- The right to make, use, sell, offer for sale, import, and otherwise dispose of or exercise any rights in the Large Work, if any are Licensable, without restriction including, without limitation, the right to sublicense the Large Work and have it sublicense such Large Work.

The recipient of the Covered Code, Modifications, or Large Work, under the terms of this License, must ensure that these rights remain Licensable under this License to the extent required to satisfy the requirements of the end-user of the Covered Code, Modifications, or Large Work.
1.1.1. "Source Code" means the preferred form of the Covered Code for making modifications to it, including all modules it contains, plus any associated interface definition files, scripts used to control compilation and installation of an Executable, or source code differential comparisons against either the Original Code or another well known, available Covered Code of the contributor's choice. The Source Code can be in a compressed or archival form, provided the appropriate decompression or de-archiving software is available.

1.2. "You" (or "Your") means an individual or a legal entity exercising rights under, and complying with all of the terms of this License, such License shall be considered to be licensed by such Contributor for the sole purpose of providing, andcombo with and/or included in, the combination of the Original Code with, or resulting from the combination of the Original Code with, the contributor's work (the "Contributor Version") to the Developer, or such contributor's work with the work of other contributors (each a "Participant") to contribute to the combination. The source code version remains available even if the Electronic Distribution Mechanism is maintained by a third party.

2. Distribution Obligations.

2.1. Initial Developer.

2.1.1. The Initial Developer hereby grants You a world-wide, royalty-free, non-exclusive license, subject to third party intellectual property claims:

(a) under intellectual property rights (other than patent or trademark) Licensable by Initial Developer to use, reproduce, modify, display, perform, sublicense and distribute the Original Code, and (b) to use, reproduce, modify, display, perform, sublicense and distribute any Original Code as modified by that Contributor, ("Contributor Version") and/or (or portions thereof), and (c) to copy for purposes of having the Code available for the duration of that Contributor's life.

2.1.2. Contributor.

2.1.2.1. Subject to third party intellectual property claims, each Contributor hereby grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or trademark) Licensable by Contributor to use, reproduce, modify, display, perform, sublicense and distribute the Original Code contained in software which such Contributor believes is Contributor's original development, and (b) to combine that Contributor's Modifications with other Contributions made available under this License, if and only if those Modifications make the resulting Covered Code application programming interface well known, available Covered Code of the Contributor's choice. The Source Code can be in a compressed or archival form, provided the appropriate decompression or description in Exhibit A shall not of themselves be deemed to be modifications of this License.

2.1.3. Availability of Source Code. Any Modification which You create or to which You contribute must be made available in Source Code form under the terms of this License and no one other than Netscape may assign a distinguishing version number.

2.2. Derivative Works.

2.2.1. If You create or use a modified version of this License (which you may only do in order to apply it to code which is not already Covered Code given a distinguishing version number. (Filling in the name of the Initial Developer, Original Code or Contributor in the notice phrase do not appear in your license (except to note that your license differs from this License) and (b) otherwise make it clear that Your version of the license contains terms which differ from the Mozilla, MOZILLAPL, MOZPL, Netscape, MPL, NPL or any confusingly similar phrase do not appear in your license (except to note that your license differs from this License) and (b) otherwise make it clear that Your version of the license contains terms which differ from this License).

2.3. Application of This License.

2.3.1. Covered Code is provided under this License on an "AS IS" BASIS, WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING WITHOUT LIMITATION, WARRANTIES THAT THE COVERED CODE IS FREE OF DEFECTS, MERCHANTABLE, FIT FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE COVERED CODE IS WITH YOU. SHOULD ANY COVERED CODE PROVE INFRINGING, THE ENTIRE RISK OF ANY LOSS OR DAMAGE FROM SUCH INFRINGEMENT SHALL BE WITH YOU.

2.4. Limitation of Liability.

2.4.1. LIMITATION OF LIABILITY.

2.5. Miscellaneous.

2.5.1. No Trademark Usage.

2.5.2. Complete Agreement.

2.5.3. Licenses.

3. Distribution Obligations.

3.1. Application of licenses.

3.1.1. The licenses granted in this Section 3.1.1 are effective on the date Initial Developer first distributes Original Code under the terms of this License.

3.1.2. Notwithstanding Section 3.1.1 above, no patent license is granted:

(a) for code that You delete from the Original Code; or

(b) for infringements caused by: (i) the modification of the Original Code or (ii) the combination of the Original Code with other software or devices.

3.2. Contributor.

3.2.1. Subject to third party intellectual property claims, each Contributor hereby grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or trademark) Licensable by Contributor to use, reproduce, modify, display, perform, sublicense and distribute the Contributor Version of the Software Serial Number, the expiration of the 60 day notice period specified above.

3.3. Participant.

3.3.1. You may assert your rights under this Section 3.3 against any Participant or you may assert your rights against any other party (e.g., a service provider) who offers a product or service containing the Covered Code and the modification to which your rights are asserted. Any party who offers the Covered Code under a license which (a) do not provide You with the rights for which this License provides or (b) limit You from distributing the Covered Code in combinations specified by the terms of this License.

4. Inability to Comply Due to Statute or Regulation.

4.1. If it is impossible for You to comply with any of the terms of this License with respect to the Original Code or any Contributor Version due to statute or judicial order, or if You are otherwise legally prohibited from doing so, You may apply to the Initial Developer for a waiver of this License, provided that:

4.2. Larger Works.

4.2.1. You may create a Larger Work by combining Covered Code with other code not governed by the terms of this License and distribute the Larger Work as a whole, in any media of Your choice. You must still comply with the terms of this License.

5. Application of This License.

5.1. This License applies to code to which the Initial Developer has attached the notice in Exhibit A and to related Covered Code.

6. Versions of the License.

6.1. New Versions.

6.1.1. Netscape Communications Corporation ("Netscape") may publish revised and/or new versions of the License from time to time. Each version will be given a distinguishing version number.

6.1.2. Effect of New Versions.

6.1.2.1. Once Covered Code has been published, a new version of this License may be made available. Covered Code domain and the code they affect. Such description must be included with all distributions of the Original Code. Except to the extent prohibited by statute or regulation, such description must be sufficiently detailed to reflect a participant of ordinary skill to be able to understand it.

6.2. Derivative Works.

6.2.1. You may create a derivative work that contains substantial modification of the Covered Code. A derivative work shall be given a new version number. (Filling in the name of the Initial Developer, Original Code or Contributor in the notice phrase do not appear in your license (except to note that your license differs from this License) and (b) otherwise make it clear that Your version of the license contains terms which differ from this License).

7. DISCLAIMER OF WARRANTY.

7.1. COVERED CODE IS PROVIDED UNDER THIS LICENSE ON AN "AS IS" BASIS, WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING WITHOUT LIMITATION, WARRANTIES THAT THE COVERED CODE IS FREE OF DEFECTS, MERCHANTABLE, FIT FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE COVERED CODE IS WITH YOU. SHOULD ANY COVERED CODE PROVE INFRINGING, THE ENTIRE RISK OF ANY LOSS OR DAMAGE FROM SUCH INFRINGEMENT SHALL BE WITH YOU.

7.2. LIMITATION OF LIABILITY.

7.2.1. LIMITATION OF LIABILITY.

8. TERMINATION.

8.1. This License and the rights granted hereunder will terminate automatically if You fail to comply with terms herein and fail to cure such breach within 60 days after written notice from the Initial Developer or Contributor, as applicable.

8.2. Termination for infringement.

8.2.1. If You or a Participant claims that the Other Party's Modifications or combination of the Covered Code infringes such party's intellectual property rights, the Other Party must promptly provide written notice to the Intellectual Property owner asserting the alleged infringement and the terms for any license to make, have made, use, offer to sell, sell, import, or have imported the modified or combined Covered Code.

9. LIMITATION OF LIABILITY.

9.1. LIMITATION OF LIABILITY.

10. MISCELLANEOUS.

10.1. Complete Agreement.

10.1.1. This License represents the complete agreement concerning subject matter hereof. If any provision of this License is held to be unenforceable, such provision shall be reformulated only to the extent necessary to make it enforceable. This License shall be governed by California law provisions (except to the extent applicable law, if any, provides otherwise) and interpreted accordingly. The laws of the State of California shall govern any question not governed hereunder. In the event of litigation arising under this License, the prevailing party shall be entitled to recover reasonable attorneys' fees and expenses. The application of the United Nations Convention on Contracts for the International Sale of Goods is expressly excluded. Any law or regulation which
provides that the language of a contract shall be construed against the drafter shall not apply to this License.

12. RESPONSIBILITY FOR CLAIMS.
As between Initial Developer and the Contributors, each party is responsible for claims and damages arising, directly or indirectly, out of its utilization of rights under this License and you agree to work with Initial Developer and Contributors to distribute such responsibility on an equitable basis. Nothing herein is intended or shall be deemed to constitute any admission of liability.

13. MULTIPLE-LICENSED CODE.
Initial Developer may designate portions of the Covered Code as Multiple-Licensed. Multiple-Licensed means that the Initial Developer permits you to use portions of the Covered Code under the terms of either the MPL or the alternative license, if any, specified by the Initial Developer in the file described in Exhibit A.

EXHIBIT A - Mozilla Public License.
The contents of this file are subject to the Mozilla Public License Version 1.1 (the "License"); you may not use this file except in compliance with the License. You may obtain a copy of the License at http://www.mozilla.org/MPL. Software distributed under the License is distributed on an "AS IS" BASIS, WITHOUT WARRANTY OF ANY KIND, either express or implied. See the License for the specific language governing rights and limitations under the License.

The Original Developer is ________________________. Portions created by the Original Developer are Copyright (C) 1998. All Rights Reserved.

Alternatively, the contents of this file may be used under the terms of the [___] License, in which case the provisions of [___] License are applicable instead of those above. If you wish to allow use of your version of this file only under the terms of the [___] License and not to allow others to use your version of this file under the MPL, indicate your decision by deleting the provisions above and replace them with the notice and any other provisions required by the [___] License. If you do not delete the provisions above, a recipient may use your version of this file under either the MPL or the [___] License."

[NOTE: The text of this Exhibit A may differ slightly from the text of the notices in the Source Code files of the Original Code. You should use the text of this Exhibit A rather than the text found in the Original Code Source Code for Your Modifications.]

The Independent JPEG Group's JPEG Software

The software included in this product contains copyrighted software that is licensed under the JPEG license.

- **JPEG license**
  - Code project . Generating Outline OpenGL, Libjpeg

This distribution contains the sixth public release of the Independent JPEG Group's free JPEG software. You are welcome to redistribute this software and to use it for any purpose, subject to the conditions under LEGAL ISSUES, below.

Serious users of this software (particularly those incorporating it into larger programs) should contact US at jpeg-info@unetueblo.net to be added to our electronic mailing list. Mailing list members are notified of updates and have a chance to participate in technical discussions.

This software is the work of Tom Lane, Philip Gladstone, Jim Boucher, Lee Crocker, Julian McGuirk, Luis Ortiz, George Phillips, Davide Rossi, Guido Vollbeding, Ger Welgers, and other members of the Independent JPEG Group.

UIG is not affiliated with the official ISO JPEG standards committee.

LEGAL ISSUES

======

In plain English:
1. We don't promise that this software works. (But if you find any bugs, please let us know!)
2. You can use this software for whatever you want. You don't have to pay us.
3. You may not pretend that you wrote this software. If you use it in a program, you must acknowledge somewhere in your documentation that you've used the UIG code.

In legalese:

The authors make NO WARRANTY or representation, either express or implied, with respect to this software, its quality, accuracy, merchantability, or fitness for a particular purpose. This software is provided "AS IS", and you, its user, assume the entire risk as to its quality and accuracy.

This software is copyright (C) 1999-2008, Thomas G. Lane. All Rights Reserved except as specified below.

Permission is hereby granted to use, copy, modify, and distribute this software (or portions thereof) for any purpose, without fee, subject to the conditions under LEGAL ISSUES, below. Modifications to this software under your choice of the License are copyright by YOU. The resulting work is an example of Derivative Work. The resulting work is a part of the Source Code.

The T-Engine Forum shall be included in the Source Code.

The版权归T-Engine Forum作者所有。T-Engine Forum的所有权利保留。
16. "Patch for Modification" means a difference, program, system, or the like in order to create the Modified Source Code from the Source Code or the Binary Code thereof.
17. "Vicarious Execution of Patch Processing" means vicarious execution service to create the Modified Source Code applying the Patch for Modification to the Source Code or the Binary Code thereof.
19. "Distribution" means any of the following acts:
   1. to transmit a work to a large number of specific persons through the Internet communication, broadcasting, and the like;
   2. to transmit a work to the general public through the Internet communication, broadcasting, and the like automatically in response to a request from the public; and
   3. to distribute a copy of a work to the general public or a large number of specific persons.

Article 3. Copyright
1. The copyrights of the Source Code shall be owned by Ken Sakamura.

Article 4. License of Source Code
1. As provided for in this Article, T-Engine Forum shall provide, and grant a license to use, the Source Code free of charge to any person who has taken the necessary procedure for registration as prescribed by T-Engine Forum and agreed to the T-License.
3. In accordance with the license granted under Article 4.1 above, the Source Code User may perform the following acts:
   1. to copy and/or modify the Source Code provided by T-Engine Forum hereunder for its own research, development and the like.
   2. to run the Source Code provided by T-Engine Forum hereunder for its own research, development and the like.
   3. to run the Source Code modified in accordance with the provision of Article 4.3 (1) above for its own research, development and the like.
   4. to distribute the Binary Code created from the Source Code provided by T-Engine Forum hereunder or from the Source Code modified in accordance with the provision of Article 4.3 (1) above.
4. In accordance with the license granted under Article 4.1 above, the System Developer may perform the following acts:
   1. to perform any and all acts set forth in this Article 4.3 above.
   2. to develop and manufacture the Embedded Product containing the Binary Code, and, whether with or without payment, provide the End User with the same and make the Binary Code available to the End User on the Embedded Product.
5. The Source Code User and the System Developer shall be obligated to give a notice that the Source Code is used, in such a way as separately specified by T-Engine Forum, when they use the Source Code or the Binary Code, or make the Binary Code available for the End User on the Embedded Product.

Article 5. Distribution of Modified Source Code
1. Any of A- members of T-Engine Forum may become the Distributor of Modification by obtaining the approval of T-Engine Forum through the registration procedure as prescribed by the Forum provided that only the department of the A- member which has taken the registration procedure may distribute the Modified Source Code in such a way as provided for in this Article as long as it holds the Authorship.
2. The Distributor of Modification may create the Modified Source Code based on the Source Code provided by T-Engine Forum and the Patch for Modification to be applied to create such Modified Source Code from the Source Code.
3. The Distributor of Modification shall, prior to the distribution, inform T-Engine Forum of and register a name and description of the Modified Source Code in such a way as specified by T-Engine Forum.
4. The Distributor of Modification shall determine the name of the Modified Source Code subject to the rules separately established by T-Engine Forum and publish an appropriate notice as required by the rules on the Patch for Modification and the Modified Source Code.
5. The Distributor of Modification may distribute the Modified Source Code to a third party, whether with or without payment, provided that the Distributor of Modification shall take the necessary measures to prohibit the third party from making the re-Distribution of the Modified Source Code.
6. Developer with the Patch for Modification. Provided, however, that the Distributor of Modification shall be obligated to confirm that the System Developer is the Source Code User duly licensed under Article 4.1.
7. The Distributor of Modification may perform the Vicarious Execution of Patch Processing for the System Developer.
8. The System Developer shall not distribute the Modified Source Code in further modified form to any third party as a stand-alone software product.
9. The System Developer may, under the same obligation as imposed in Article 4.5, make the Embedded Product available for the End User through use of the Patch for Modification distributed by the Distributor of Modification or the Derivative Works obtained through the Vicarious Execution of Patch Processing.

Article 6. Distribution and Registration of the Ported Source Code
1. The Source Code User and the System Developer may, whether with or without charge, distribute to any third party only the following parts of the Ported Source Code on the T-Engine Hardware or the Similar Hardware to T-Engine Hardware:
   1. The Hardware-dependent Part and/or Compiler-dependent Part; provided that the Source Code User and the System Developer shall inform T-Engine Forum of, and T-Engine Forum may publish, a method for distributing said Part(s) to third parties.
   2. The Header File; provided that the Header File shall be distributed together with the Binary Code of the Ported Source Code.
   3. Any member of T-Engine Forum may request T-Engine Forum to register and distribute, as an original source code for T-Engine Hardware, the Ported Source Code on the T-Engine Hardware or the Similar Hardware to T-Engine Hardware.
   4. Any member of T-Engine Forum who requests the distribution mentioned in the preceding paragraph shall accord to the following conditions:
      1. The member shall confirm that the object hardware is the T-Engine Hardware or the Similar Hardware to T-Engine Hardware.
      2. The member shall provide T-Engine Forum with a complete set of operational environment for the object hardware and T-Engine Forum free of charge when requesting the distribution.
      3. The member shall submit test results of the Ported Source Code to T-Engine Forum when requesting the distribution.
      4. In the event that T-Engine Forum accepts the request mentioned in Article 6.2, T-Engine Forum shall register and distribute the Ported Source Code as the Source Code for T-Engine. Provided, however, that the Ported Source Code may be treated in the same way as the Modified Source Code until the time of registration hereunder.
      5. The provision set forth in Article 3 shall apply to the Ported Source Code registered in accordance with this Article.

Article 7. Use for Other Purpose
1. Any use of the Source Code, the Modified Source Code or the Ported Source Code other than those stipulated in Articles 4, 5 and 6 shall be subject to the prior approval of T-Engine Forum.

Article 8. Limited Warranty
1. T-Engine Forum and the copyright holder of the Source Code warrant that the Source Code does not infringe third party's copyrights. Provided, however, that T-Engine Forum and the copyright holder of the Source Code make no warranty as to the Hardware-dependent Part and/or Compiler-dependent Part set forth in Article 6.2 in the Ported Source Code.
3. Neither T-Engine Forum nor the copyright holder of the Source Code warrants that the Source Code does not infringe any third party's industrial property rights. In no event shall T-Engine Forum and the copyright holder of the Source Code be liable for any dispute which may arise between the Source Code User and a third party in connection with the third party's industrial property rights.

Article 9. Indemnity
1. Neither T-Engine Forum nor the copyright holder of the Source Code shall be liable for any damages (including, but not limited to, damages resulting from loss of profit, business interruption, loss of business information or any other pecuniary damage) arising out of use or impossibility of use of the Source Code, except for damages caused by the breaching person or the obstructing person, regardless of whether or not the said person is a member of T-Engine Forum.
2. In case of breach of this License Agreement by a member of T-Engine Forum, T-Engine Forum may take appropriate measures against the breaching person or the obstructing person, regardless of whether or not the said person is a member of T-Engine Forum.
3. Any legal dispute which may arise in relation to any breach of this License Agreement shall be subject to the exclusive jurisdiction of the Tokyo District Court.

Article 11. Governing Law and Language
1. This License Agreement shall be governed by and interpreted under the laws of Japan.
2. This License Agreement is executed in both Japanese text and English text provided that the Japanese text shall govern the interpretation and performance of this License Agreement.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions. "License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.
2. "Licensee" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.
“Legal Entity” shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, “control” means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You", "Your", shall mean an individual or Legal Entity exercising permissions granted by this License.

"Work" shall mean the work of authorship, including the original version of the Work and any derivatives, adaptations, or additions to the Work. "Work" also includes derivative works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner by or an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, Derivative Works shall not include works that remain separate from, or merely link to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any additions or modifications to the Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner by or an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing as "Not a Contribution.

"Contributor" shall mean an individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   a. You must give any other recipients of the Work or Derivative Works a copy of this License; and
   b. You must cause any modified files to carry prominent notices stating that You changed the files; and
   c. You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
   d. If the Work includes a NOTICE file as part of its distribution, then any Derivative Works that You distribute must include a copy of the NOTIICE file; and
   e. You must do all that is reasonably practical to delete or alter any information contained in a NOTICE file by合理的 maxim of non-misrepresentation to Your License. You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms and conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement You may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied. See the License for the specific language governing permissions and limitations under the License.

Correct disposal of this product and its electrical accessories (e.g. charger, headset, USB cable) should not be disposed of with other household waste at the end of their working life. To prevent possible harm to the environment or human health from uncontrolled waste disposal, please separate these items from other types of waste and recycle them responsibly to promote the sustainable reuse of material resources.

Correct Disposal of This Product (Waste Electrical & Electronic Equipment)

(Applicable in the European Union and other European countries with separate collection systems)

This marking on the product, accessories or literature indicates that the product and its electronic accessories (e.g. charger, headset, USB cable) should not be disposed of with other household waste at the end of their working life.

To prevent possible harm to the environment or human health from uncontrolled waste disposal, please separate these items from other types of waste and recycle them responsibly to promote the sustainable reuse of material resources.

Correct disposal of batteries in this product

(Applicable in the European Union and other European countries with separate battery return systems.)

This marking on the battery, manual or packaging indicates that the batteries in this product should not be disposed of with other household waste at the end of their working life. Where marked, the chemical symbols Hg, Cd or Pb indicate that the battery contains mercury, cadmium or lead above the reference levels in EC Directive 2006/66. If batteries are not properly disposed of, these substances can cause harm to human health or the environment. To protect natural resources and to promote material reuse, please separate batteries from other types of waste and recycle them through your local, free battery return system.
