IMPORTANT SAFETY INSTRUCTIONS

1. Read these instructions.
2. Keep these instructions.
3. Heed all warnings.
4. Follow all instructions.
5. Do not use this apparatus near water.
6. Clean the contaminated area on the product surface with a soft, dry cloth or a damp cloth. (Do not use a detergent or cosmetic products that contain alcohol, solvents or surfactants or oil constituents as they may deform or cause damage to the product.)
7. Do not block any ventilation openings, install in accordance with the manufacturer’s instructions.
8. Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
9. Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
10. Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
11. Only use attachments/accessories specified by the manufacturer.
12. Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.
13. Unplug this apparatus during lightning storms or when unused for long periods of time.
14. Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.
15. This product is intended to be supplied by a Listed Power Supply Unit marked “Class 2” or “LPS” and rated from 12 Vdc, min. current for each product.

WARNING

TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS PRODUCT TO RAIN OR MOISTURE. DO NOT INSERT ANY METALLIC OBJECT THROUGH THE VENTILATION GRILLS OR OTHER OPENINGS ON THE EQUIPMENT.

Apparatus shall not be exposed to dripping or splashing and that no objects filled with liquids, such as vases, shall be placed on the apparatus.

To prevent injury, this apparatus must be securely attached to the Wall/ceiling in accordance with the installation instructions.

CAUTION

EXPLANATION OF GRAPHICAL SYMBOLS

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of “dangerous voltage” within the product’s enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the product.
Class I construction
An apparatus with CLASS I construction shall be connected to a MAINS socket outlet with a protective earthing connection.

Battery
Batteries (battery pack or batteries installed) shall not be exposed to excessive heat such as sunshine, fire or the like.

Disconnection Device
Disconnect the main plug from the apparatus, if it’s defected. And please call a repair man in your location.
When used outside of the U.S., it may be used HAR code with fittings of an approved agency is employed.

CAUTION
Risk of explosion if battery is replaced by an incorrect type.
Dispose of used batteries according to the instructions.
These servicing instructions are for use by qualified service personnel only.
To reduce the risk of electric shock do not perform any servicing other than that contained in the operating instructions unless you are qualified to do so.
Please use the input power with just one camera and other devices must not be connected.
The ITE is to be connected only to PoE networks without routing to the outside plant.

Please read the following recommended safety precautions carefully.
• Do not place this apparatus on an uneven surface.
• Do not install on a surface where it is exposed to direct sunlight, near heating equipment or heavy cold area.
• Do not place this apparatus near conductive material.
• Do not attempt to service this apparatus yourself.
• Do not place a glass of water on the product.
• Do not install near any magnetic sources.
• Do not block any ventilation openings.
• Do not place heavy items on the product.
• Please wear protective gloves when installing/removing the camera.
The high temperature of the product surface may cause a burn.

User’s Manual is a guidance book for how to use the products.
The meaning of the symbols are shown below.
• Reference : In case of providing information for helping of product’s usages
• Notice : If there’s any possibility to occur any damages for the goods and human caused by not following the instruction

⚠️ Please read this manual for the safety before using of goods and keep it in the safe place.
PRODUCT FEATURES

• Dustproof/Waterproof (IP66) (QNO-6070R/QNV-6070R)
  The dustproof and waterproof design makes you feel at ease when installing the product outdoors or exposing it to rain.

• IR mode
  If the IR indicator turns on, the product switches to the IR mode for preventing an object from being too bright, which helps you identify the object in near distance.

• Supports 2 megapixel resolution videos

• Multi-Streaming
  This network camera can display videos in different resolutions and qualities simultaneously using different CODECs.

• Web Browser-based Monitoring
  Using the Internet web browser to display the image in a local network environment.

• Alarm
  When an event occurs, video is either sent to the email address registered by the user, sent to the FTP server, saved in a Micro SD card or NAS, or a signal is sent to the alert output terminal.

• Tampering Detection
  Detects tempering attempts on video monitoring.

• Defocus detection function
  Detects the defocus phenomenon of the camera lens.

• Motion Detection
  Detects motion from the camera’s video input.

• Auto Detection of Disconnected Network
  Detects network disconnection before triggering an event.

• ONVIF Compliance
  This product supports ONVIF Profile S&G. For more information, refer to www.onvif.org.

RECOMMENDED PC SPECIFICATIONS

• CPU : Intel(R) Core(TM) i7 3.4 GHz or higher
• Supported OS : Windows 7, 8.1, 10, Mac OS X 10.9, 10.10, 10.11
• Plug-in free web viewer
  Supported web browsers : Google Chrome 47, MS Edge 20
• Plug-in Webviewer
  Supported web browsers : MS Explorer 11, Mozilla Firefox 43, Apple Safari 9 ※ Mac OS X only
• VGA : PCIe 256MB GDDR3 video graphics card or higher

RECOMMENDED MICRO SD/SDHC/SDXC MEMORY CARD SPECIFICATIONS

• Recommended capacity : 4GB – 128GB (uhs-1 class)
• For your camera, we recommend you use a memory card from the following manufacturers:
  Micro SD/SDHC/SDXC Memory Card : Sandisk, Transcend

NAS RECOMMENDED SPECS

• Recommended capacity : 200GB or higher is recommended.
• Simultaneous access : One unit of NAS can accept a maximum of sixteen camera accesses.
• For this camera, you are recommended to use a NAS with the following manufacturer’s specs.

<table>
<thead>
<tr>
<th>Recommended products</th>
<th>Available sizes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Netgear NAS</td>
<td>A maximum of 16 cameras can access simultaneously.</td>
</tr>
<tr>
<td>Synology NAS</td>
<td>A maximum of 16 cameras can access simultaneously.</td>
</tr>
</tbody>
</table>

※ When you use Netgear’s NAS equipment, do not allocate the capacity for use.
※ If you use NAS equipment for purposes other than video saving, the number of accessible cameras may be reduced.
WHAT’S INCLUDED

Please check if your camera and accessories are all included in the product package. (As for each sales country, accessories are not the same.)

installation & connection

INSTALLATION (QND-6070R)

Precautions before installation
Ensure you read out the following instructions before installing the camera:

- It must be installed on the area (ceiling or wall) that can withstand 5 times the weight of the camera including the installation bracket.
- Stuck-in or peeled-off cables can cause damage to the product or a fire.
- For safety purposes, keep anyone else away from the installation site. And put aside personal belongings from the site, just in case.

Disassembling

1. Use one hand to hold the camera’s bottom part and turn the cover counterclockwise with another hand to separate it.

2. Lift up the inner cover to separate it.

Installation

1. Attach the installation template to the selected area and punch 3 holes as shown in the figure.

2. Using 2 tapping screws provided, fix the camera at 2 holes drilled with a template.
   - Set the < > mark imprinted on the camera to face the direction of camera monitoring.

3. Connect the camera internal terminal with the corresponding cable.

4. Adjust the lens in a desired direction by referring to the “Adjusting the monitoring direction for the camera” section. (page 18)

   - We recommend you not to touch the lens as the camera lens has been properly focused in the final process of manufacturing. If so, the lens may be out of focus or stained by alien substances.

5. Please connect the inner cover to the main body.

6. While grabbing the bottom side of the camera with your hand, please grab and push its cover with the other hand to align the two arrow signs, as shown in the figure.

   - To assemble the dome cover, make the arrows match each other and press the cover firmly.
   - If the dome cover is rotated during assembly or is assembled incorrectly, diffused reflection may occur or the lens section may rotate, which will cause the shooting range to be changed.
   - Make sure that the dome cover is correctly connected to the bottom part as shown in the figure.
   - If the snap-fit is not connected correctly, the dome cover may fall, which may cause injury.
This camera is waterproof and in compliance with the IP66 spec, but the jack connected to the external cable is not. You are recommended to install this product below the edge of eaves to prevent the cable from being externally exposed.

Precautions before installation
Ensure you read out the following instructions before installing the camera:
• It must be installed on the area (ceiling or wall) that can withstand 5 times the weight of the camera including the installation bracket.
• Stuck-in or peeled-off cables can cause damage to the product or a fire.
• For safety purposes, keep anyone else away from the installation site. And put aside personal belongings from the site, just in case.

Installation
1. Attach the installation template at a desired location and make 3 holes the same size as shown in the picture below.

2. Insert and fasten 3 tapping screws provided into 3 holes to secure the camera.

3. Connect the appropriate cables with camera terminals.

4. Adjust the camera direction using the L wrench provided.

How to connect the RJ45 waterproof cable to a LAN cable
1. Insert it through the arrow direction.

2. Connect the LAN connector (male) to the cable.

3. Connect the RJ45 modular jack (female) to the RJ45 connector (male).

4. Assemble by rotating the RJ45 modular jack (female) and the RJ45 protection cover clockwise (Follow the arrow).

5. Assemble by rotating RJ45 protection cover and back cover clockwise (Follow the arrow). When the back cover is assembled, the cable waterproof gasket is tightly attached to the cable to make it waterproof.

You must fully assemble it to rotate the back cover up to the end of the screw thread of the RJ45 connector.
Outdoor installation
When you install it outside of the building, please waterproof it with waterproof butyl rubber tape (can be purchased in stores) so that water does not leak from the gap of the cable connected to the outside.

1. Connect the power, I/O, AUDIO, and LAN cables.
2. Wrap the black cable jacket (Area A) and the cable connection area with waterproof (butyl rubber) tape so that more than half of the butyl rubber tape is overlapped.

- If the cable jacket is not waterproofed properly, then it can directly cause leakage. Make sure to protect the cable with a dense layer of taping.
- Waterproof butyl tape is made of butyl rubber that can be stretched to twice its normal length.

To adjust the zoom factor or focus
1. Loosen the front cover as shown.
2. Loosen the zoom/focus lever slightly.
3. Position the zoom/focus lever to WIDE (NEAR) or TELE (FAR) as appropriate.
4. Then, tighten the zoom/focus lever to fix the adjusted position.
5. Turn the front cover to tighten it.

- To ensure seamless waterproofing, tighten up the front cover by turning it to the end.
- When combining the front cover, please combine the main body and the front cover so that the LOCK indicator is interlocked.
- Use the lever to adjust the zoom factor or focus, and turn the lever clockwise to fix it.
- Before you can adjust the zoom factor/focus of the lens, loosen and remove the front cover.

Precautions before installation
Ensure you read out the following instructions before installing the camera:
- It must be installed on the area (ceiling or wall) that can withstand 5 times the weight of the camera including the installation bracket.
- Stuck-in or peeled-off cables can cause damage to the product or a fire.
- For safety purposes, keep anyone else away from the installation site. And put aside personal belongings from the site, just in case.

Installation (QNV-6070R)
- This camera is waterproof and in compliance with the IP66 spec, but the jack connected to the external cable is not. You are recommended to install this product below the edge of eaves to prevent the cable from being externally exposed.

Disassembling
1. Using the L wrench provided, turn the 3 fastening bolts on the dome cover counter clockwise to remove the cover.

- To ensure seamless waterproofing, tighten up the front cover by turning it to the end.
- When combining the front cover, please combine the main body and the front cover so that the LOCK indicator is interlocked.
- Use the lever to adjust the zoom factor or focus, and turn the lever clockwise to fix it.
- Before you can adjust the zoom factor/focus of the lens, loosen and remove the front cover.
Installation
1. Using the template provided as an accessory, drill holes for installation screws (at least 55mm deep with a diameter of 6mm).
2. Align the installation holes of the camera, and then insert and fasten tapping screws (M4.5 x L50).
3. Connect and arrange the necessary cables lest that they should be damaged or twisted while installing the camera.
4. Adjust the lens in a desired direction by referring to the “Adjusting the monitoring direction for the camera” section. (page 18)
5. Close the dome cover.
   - Securely fasten the fastening bolt using an L wrench to prevent water from leaking.

Connecting the LAN cable
1. Remove the dome cover and the case.
2. Pull out the long projected part of the rubber plug on the bottom and remove it as shown in the figure.
   - Use an appropriate cable bush for the LAN cable to be connected.
     - Basic camera: Use the cable with a diameter of Ø5~6.5.
     - Components provided: Use the cable with a diameter of Ø7~8.5.
3. Insert the LAN cable into the large hole made by removing the projected part of the rubber plug in step 2 above.
4. Remove the sheath with a cable cutter, and align the cables.
5. Connect the LAN cable with a LAN connector, and insert it into the LAN tool.
6. Connect the finished cable to the Ethernet port.

Connecting the audio/alarm cable and power cable
1. Remove the dome cover and the case.
2. Pull out the rubber plug on the bottom as shown in the figure.
3. Insert the alarm/audio cable through the hole created by removing the rubber cap in No. 2, and connect the cable to the alarm terminal.
4. When installing the camera, arrange the cables by hanging them up on the fixing hook to prevent the cables from being damaged or caught.
5. Put the rubber cap located on the alarm/audio cable in the hole.
6. Insert the power cable through the small hole and hang the cable up on the fixing hook.
7. Connect the power cable to the power terminal block.
8. Adjust the lens in a desired direction by referring to the “Adjusting the monitoring direction for the camera” section. (page 18)
9. Attach the dome cover.
Attaching to the unbundled adapter
Choose and purchase a necessary one of the following options (unbundled) that is suitable to the installation site or for your convenience.

1. Remove the dome cover from the case by referring to the "Disassembling" section. (page 16)
2. Use the provided machine screw to fix the camera case to the unbundled adapter.
3. Connect and arrange the necessary cables lest that they should be damaged or twisted while installing the camera.
4. Install the camera body in the reverse order of "Disassembling".
5. Adjust the lens in a desired direction by referring to the "Adjusting the monitoring direction for the camera" section. (page 18)
6. Close the dome cover.
   - Securely fasten the fastening bolt using an L wrench to prevent water from leaking.

Outdoor installation
When you install it outside of the building, please waterproof it with waterproof butyl rubber tape (can be purchased in stores) so that water does not leak from the gap of the cable connected to the outside.

1. Connect the power, I/O, BNC, and LAN cables.
2. Wrap the black cable jacket (Area A) and the cable connection area with waterproof (butyl rubber) tape so that more than half of the butyl rubber tape is overlapped.

   - If the cable jacket is not waterproofed properly, then it can directly cause leakage. Make sure to protect the cable with a dense layer of taping.
   - Waterproof butyl tape is made of butyl rubber that can be stretched to twice its normal length.

Optional Accessories for Installation
For your easier installation, you can purchase appropriate optional accessories available.

1. WALL MOUNT ADAPTOR(SBP-300WM or SBP-300WM1)/HANGING MOUNT(QND-6070R : SBP-122HM, QNV-6070R : SBP-301HM2)
   This adaptor is used when installing the dome camera onto a wall.

2. CEILING MOUNT ADAPTOR(SBP-300CM)/HANGING MOUNT(QND-6070R : SBP-122HM, QNV-6070R : SBP-301HM2)
   This adaptor is used when installing the dome camera on a concrete ceiling.

3. POLE MOUNT ADAPTOR(SBP-300PM)
   This is an adaptor for WALL MOUNT ADAPTOR (SBP-300WM or SBP-300WM1) installation on a pole whose diameter is bigger than 80mm.

4. CORNER MOUNT ADAPTOR (SBP-300KM)
   This is an adaptor for WALL MOUNT ADAPTOR (SBP-300WM or SBP-300WM1) installation on the corner of wall joint.

5. BULLET BACK BOX (SBO-100B1)
   Adapter used for the installation of a bullet camera on the wall or ceiling.
6. VANDAL BACK BOX (SBV-136B)
Adapter used for the installation of a vandal camera on the wall or ceiling.

Adjusting the monitoring direction for the camera (QND-6070R/QNV-6070R)

- Adjusting the monitoring direction
  You can adjust the camera direction only when the camera is fixed on the ceiling.
  Where, rotating the camera unit to the left or right is called Pan, adjusting the tilt is called Tilt, and turning the lens on its axis is called Rotation.
  - The effective range of pan is a total of 350 degrees.
  - The effective range of rotation is a total of 355 degrees.
  - The effective range of tilt is a total of 67 degrees.

  - The image can be covered up by the camera case depending on the angle.
  - Do not forcefully turn the focus/zoom lens after the dome case is disassembled.
    Otherwise, it may cause an incorrect focus due to a motor failure.

- Methods of adjustment
  1. After installing the camera, adjust the panning angle in consideration of the monitoring direction.
  2. Set the horizontal angle so that the image is not reversed.
  3. Adjust the tilt angle so that the camera faces toward the monitoring object.

INSERTING/REMOVING A MICRO SD MEMORY CARD

- Disconnect the power cable from the camera before inserting the Micro SD memory card.
- Do not insert the Micro SD memory card while it's upside down by force.
  Otherwise, it may damage the Micro SD memory card.
- When it rains or the humidity is high, insertion or ejection of a Micro SD card is not recommended.
- Disassembly of the product cover should be finished within 5 minutes, or there will be the risk of internal dew condensation.

Inserting a Micro SD Memory Card (QNO-6070R)

1. Turn the front cover to the UNLOCK (_unlock_) direction.
2. Pull and separate the front cover.
3. Insert a Micro SD card in the arrow direction shown in the figure.

DISCONNECTING/REMOVING A MICRO SD MEMORY CARD

- Disconnect the power cable from the camera before inserting the Micro SD memory card.
- Do not insert the Micro SD memory card while it's upside down by force.
  Otherwise, it may damage the Micro SD memory card.
- When it rains or the humidity is high, insertion or ejection of a Micro SD card is not recommended.
- Disassembly of the product cover should be finished within 5 minutes, or there will be the risk of internal dew condensation.
Inserting a Micro SD Memory Card (QND-6070R/QNV-6070R)

1. Separate the Dome cover of the camera.
2. Insert a Micro SD card in the arrow direction shown in the figure.

Removing a Micro SD Memory Card

Gently press down on the exposed end of the memory card as shown in the diagram to eject the memory card from the slot.
### MEMORY CARD INFORMATION (NOT INCLUDED)

**What is a memory card?**
The memory card is an external data storage device that has been developed to offer an entirely new way to record and share video, audio, and text data using digital devices.

**Selecting a memory card that’s suitable for you**
Your camera supports Micro SD/SDHC/SDXC memory cards. You may, however, experience compatibility issues depending on the model and make of the memory card. For your camera, we recommend you use a memory card from the following manufacturers:
- Micro SD/SDHC/SDXC Memory Card: Sandisk, Transcend

It is recommended to use a 4 to 128GB (uhs-1 class) memory card for this camera. Playback performance can be affected depending on the speed of memory card, so use the high-speed memory card.

**Memory Card Components**
- Contacts
- Micro SD/SDHC/SDXC

---

**CONNECTIONS WITH OTHER DEVICE**

**CAUTION:** Be aware of the Rated Voltage and Polarity of the power connection.

**<QNO-6070R>**
- Ethernet
- Power

**<QND-6070R>**
- Ethernet
- Power

**<QNV-6070R>**
- Ethernet
- Power
**Ethernet Connection**
Connect the Ethernet cable to the local network or to the Internet.

**Power Supply**
Use the screwdriver to connect each line (+, –) of the power cable to the corresponding power port of the camera.

- If both PoE and DC 12V are applied simultaneously, the product will be supplied with power from PoE.
  - You can also use a router featuring PoE to supply power to the camera.
  - Use PoE that is compliant with the IEEE 802.3af protocols.
  - It is advisable to use only one power source from PoE and DC 12V.
- Be careful not to reverse the polarity when you connect the power cable.
- If you want to connect an external device, you must turn off the external device before proceeding.

**Power Cable Specification for Each Model**
In case of DC 12V Input:

<table>
<thead>
<tr>
<th>Wire Type (AWG)</th>
<th>#22</th>
<th>#20</th>
<th>#18</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cable Length (Max.)</td>
<td>24m</td>
<td>38m</td>
<td>60m</td>
</tr>
</tbody>
</table>

**Network Cable Specification**

<table>
<thead>
<tr>
<th>Item</th>
<th>Contents</th>
<th>Remark</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector</td>
<td>RJ45</td>
<td></td>
</tr>
<tr>
<td>Ethernet</td>
<td>10/100BASE-T</td>
<td>10/100 Mbps</td>
</tr>
<tr>
<td>Cable</td>
<td>UTP Category 5e</td>
<td></td>
</tr>
<tr>
<td>Max Distance</td>
<td>100M</td>
<td>DC Resistance ≤ 0.188 Ω/m</td>
</tr>
<tr>
<td>PoE Support</td>
<td>EEE 802.3af</td>
<td></td>
</tr>
</tbody>
</table>

- If you use a cable other than Category 5e standards, 100m of transmission distance is not guaranteed.

**Connecting to Audio Input**
1. Connect the AUDIO IN port of the camera with the microphone or LINE OUT port of the amplifier that the microphone is connected to.
   - You can use the built-in microphone in the camera without connecting an external microphone. (only available in QND-6070R)
2. Check the specifications for audio input.
   - **Audio Codec**
     - Audio In: G.711 PCM (Bit Rate: 64kbps / Sampling Frequency: 8kHz), G.726 ADPCM (Bit Rate: 16kbps, 24kbps, 32kbps, 40kbps / Sampling Frequency: 8kHz)
   - **Full duplex Audio**
   - **Audio in (QND-6070R)**: Selectable (Built-in microphone), Supported voltage: 2.5VDC (4mA), Input impedance: 2K Ohm
   - **Audio in (QND-6070R/QNV-6070R)**: Selectable (microphone/Line-in), Supported voltage: 2.5VDC (4mA), Input impedance: 2K Ohm
Connecting to the I/O port box

Connect the Alarm I/O cable to the corresponding port of the port box.

- ALARM-IN: Used to connect the alarm input sensor or external day/night sensor.
- ALARM-OUT: Used to connect the alarm output signal.
- GND: Common port for alarm in/output signal.

⚠ If devices (e.g., flashing light and siren) that exceed the voltage and current specifications are connected by using the open collector method, it may cause malfunction. Refer to the "Alarm Out Wiring Diagram" when connecting devices that exceed the voltage and current specifications. (page 23)

To connect the external sensor

Connect one strand of each signal line (2-strand) of the sensors to the [ALARM IN] port, and connect the other strand to the [GND] port.
To connect the alarm out

If devices (e.g., flashing light and siren) that exceed the voltage and current specifications are connected by using the open collector method, it may cause malfunction.

Refer to the alarm out connection diagram below when connecting devices that exceed the voltage and current specifications.
You can set up the network settings according to your network configurations.

**CONNECTING THE CAMERA DIRECTLY TO LOCAL AREA NETWORKING**

Connecting to the camera from a local PC in the LAN

1. Launch an Internet browser on the local PC.
2. Enter the IP address of the camera in the address bar of the browser.

- A remote PC in an external Internet out of the LAN network may not be able to connect to the camera installed in the intranet if the port-forwarding is not properly set or a firewall is set.
- In this case, to resolve the problem, contact your network administrator.
- In the IP installer, you can use the initial password, "4321" to set IP Address, Subnet Mask, Gateway, HTTP Port, VNP Port, IP type. After changing the network interface, for better security, access the web viewer and change the password.
- By factory default, the IP address will be assigned from the DHCP server automatically.
  - If there is no DHCP server available, the IP address will be set to 192.168.1.100.
  - To change the IP address, use the IP Installer.
  - For further details on IP Installer use, refer to "Static IP Setup". (Page 26)

**CONNECTING THE CAMERA DIRECTLY TO A DHCP BASED DSL/CABLE MODEM**

1. Connect the user PC directly with the network camera.
2. Run the IP Installer and change the IP address of the camera so that you can use the web browser on your desktop to connect to the Internet.
3. Use the Internet browser to connect to the web viewer.
6. Move to [Basic] – [IP & Port], and set the IP type to [DHCP].
7. Connect the camera, which was removed from your PC, directly to the modem.
8. Restart the camera.

- For configuring the DDNS settings, refer to "DDNS". (page 49)
- For registering the DDNS settings, refer to "Registering with DDNS". (page 49)
- Refer to "IP & Port" for how to setup IP. (page 43)
CONNECTING THE CAMERA DIRECTLY TO A PPPoE MODEM

1. Connect the user PC directly with the network camera.
2. Run the IP Installer and change the IP address of the camera so that you can use the web browser on your desktop to connect to the Internet.
3. Use the Internet browser to connect to the web viewer.
6. Move to [Basic] – [IP & Port] Setup Page, set the IP type to [PPPoE], and enter the network service’s ID and password.
7. Connect the camera, which was removed from your PC, directly to the modem.
8. Restart the camera.

For configuring the DDNS settings, refer to “DDNS”. (page 49)
For registering the DDNS settings, refer to “Registering with DDNS”. (page 49)
Refer to “IP & Port” for how to setup IP. (page 43)

CONNECTING THE CAMERA TO A BROADBAND ROUTER WITH THE PPPoE/CABLE MODEM

This is for a small network environment such as homes, SOHO and ordinary shops.

Configuring the network settings of the local PC connected to a Broadband Router

Configuring the network settings of the local PC connected to a Broadband Router, follow the instructions below.

- Select : <Network> → <Properties> → <Local Area Connection> → <General> → <Properties> → <Internet Protocol (TCP/IP)> → <Properties> → <Obtain an IP address automatically> or <Use the following IP address>.

Follow the instructions below if you select <Use the following IP address>:

ex1) If the address (LAN IP) of the Broadband Router is 192.168.1.1
IP address : 192.168.1.100
Subnet Mask : 255.255.255.0
Default Gateway : 192.168.1.1

ex2) If the address (LAN IP) of the Broadband Router is 192.168.0.1
IP address : 192.168.0.100
Subnet Mask : 255.255.255.0
Default Gateway : 192.168.0.1

ex3) If the address (LAN IP) of the Broadband Router is 192.168.xxx.1
IP address : 192.168.xxx.100
Subnet Mask : 255.255.255.0
Default Gateway : 192.168.xxx.1

For the address of the Broadband Router, refer to the product’s documentation.
For more information about port forwarding of the broadband router, refer to “Port Range Forward (Port Mapping) Setup”. (Page 28)
network connection and setup

BUTTONS USED IN IP INSTALLER

<table>

<td>Exits the IP Installer program.</td>
</tr>
</tbody>
</table>

For the IP Installer, use only the installer version provided in the installation CD or use the latest one if available. You can download the latest version from the Hanwha Techwin web site.

STATIC IP SETUP

Manual Network Setup

Run `<IP Installer_v2.XX.exe>` to display the camera search list. At the initial startup, both [Auto Set] and [Manual Set] will be grayed out.

For cameras found with the IPv6 setting, these buttons will be grayed out as the cameras do not support this function.

1. Select a camera in the search list. Check the MAC address of the camera on the camera’s label. Both the [Auto Set] and [Manual Set] buttons will be activated.

2. Click [Manual Set]. The Manual Setting dialog appears. <IP Address>, <Subnet Mask>, <Gateway>, <HTTP Port>, and <VNP Port> of the camera are displayed in the preset values.

3. In the <Address> pane, provide the necessary information.
   - MAC (Ethernet) Address: The MAC address imprinted on the camera label is automatically displayed and requires no user setting.
   - IP related parameters can be set only when DHCP is not checked.

Run `<IP Installer_v2.XX.exe>` to display the camera search list. At the initial startup, both [Auto Set] and [Manual Set] will be grayed out.

For cameras found with the IPv6 setting, these buttons will be grayed out as the cameras do not support this function.

1. Select a camera in the search list. Check the MAC address of the camera on the camera’s label. Both the [Auto Set] and [Manual Set] buttons will be activated.

2. Click [Manual Set]. The Manual Setting dialog appears. <IP Address>, <Subnet Mask>, <Gateway>, <HTTP Port>, and <VNP Port> of the camera are displayed in the preset values.

3. In the <Address> pane, provide the necessary information.
   - MAC (Ethernet) Address: The MAC address imprinted on the camera label is automatically displayed and requires no user setting.
   - IP related parameters can be set only when DHCP is not checked.
If not using a Broadband Router
For setting <IP Address>, <Subnet Mask>, and <Gateway>, contact your network administrator.

4. In the <Port> pane, provide necessary information.
   - HTTP Port: Used to access the camera using the Internet browser, defaulted to 80.
   - VNP Port: Used to control the video signal transfer, defaulted to 4520.

5. Enter the password.
   Enter the password of “admin” account, which was used to access the camera.
   - For the security purposes, you are recommended to use a combination of numbers, alphabets uppercase and lowercase and special characters for your password.
   - If you want to change the password, refer to “Administrator password change” of the user setup. (page 42)

6. Click [OK].
   Manual network setup will be completed.

If using a Broadband Router
- IP Address: Enter an address falling in the IP range provided by the Broadband Router.
  ex) 192.168.1.2–254, 192.168.0.2–254, 192.168.XXX.2–254
- Subnet Mask: The <Subnet Mask> of the Broadband Router will be the <Subnet Mask> of the camera.
- Gateway: The <Local IP Address> of the Broadband Router will be the <Gateway> of the camera.
- The settings may differ depending on the connected Broadband Router model.
  For more information, refer to the user manual of the applicable router.
- For more information about port forwarding of the broadband router, refer to “Port Range Forward (Port Mapping) Setup”. (Page 28)

If the Broadband Router has more than one camera connected
Configure the IP related settings and the Port related settings distinctly with each other.

<table>
<thead>
<tr>
<th>Category</th>
<th>Camera #1</th>
<th>Camera #2</th>
</tr>
</thead>
<tbody>
<tr>
<td>IP related settings</td>
<td>IP Address</td>

<td>4521</td>
</tr>
</tbody>
</table>

- If the <HTTP Port> is set other than 80, you must provide the <Port> number in the address bar of the Internet browser before you can access the camera.
  ex) http://IP address : HTTP Port
  http://192.168.1.100:8080

Auto Network Setup
Run <IP Installer_v2.XX.exe> to display the camera search list.
At the initial startup, both [Auto Set] and [Manual Set] will be grayed out.

- For cameras found with the IPv6 setting, these buttons will be grayed out as the cameras do not support this function.

1. Select a camera in the search list.
   Check the MAC address of the camera on the camera’s label.
   Both the [Auto Set] and [Manual Set] buttons will be activated.

2. Click [Auto Set].
   The Auto Setting dialog appears.
   The <IP Address>, <Subnet Mask>, and <Gateway> will be set automatically.

3. Enter the password.
   Enter the password of “admin” account, which was used to access the camera.
   - For the security purposes, you are recommended to use a combination of numbers, alphabets uppercase and lowercase and special characters for your password.
   - If you want to change the password, refer to “Administrator password change” of the user setup. (page 42)

4. Click [OK].
   Auto network setup will be completed.
DYNAMIC IP SETUP

Dynamic IP Environment Setup
- Example of the Dynamic IP environment
  - If a Broadband Router, with cameras connected, is assigned an IP address by the DHCP server
  - If connecting the camera directly to modem using the DHCP protocols
  - If IPs are assigned by the internal DHCP server via the LAN

Checking the Dynamic IP
1. Run the IP Installer on the user’s local computer. Cameras allocated with <Dynamic IP> address are shown in the list.
2. Select a camera from the search result.
3. Click the [Manual Set] button and check the camera’s <Dynamic IP> address. If you uncheck <DHCP>, you can change IP to <Static>.

PORT RANGE FORWARD (PORT MAPPING) SETUP

If you have installed a Broadband Router with a camera connected, you must set the port range forwarding on the Broadband Router so that a remote PC can access the camera in it.

Manual Port Range Forwarding
1. From the Setup menu of the Broadband Router, select <Applications & Gaming> - <Port Range Forward>. For setting the port range forward for a third-party Broadband Router, refer to the user guide of that Broadband Router.
2. Select <TCP> and <UDP Port> for each connected camera to the Broadband Router. The number of each port to be configured to the IP router should be set according to the port number designated in <Setup> - <Basic> - <IP & Port> on the camera web viewer.

Setting up Port Range Forward for several network cameras
- You can set a rule of Port Forwarding on the Broadband Router device through its configuration web page.
- A user can change each port using the camera setting screen.

When Camera1 and Camera2 are connected to a router:

- Port forwarding can be done without additional router setup if the router supports the UPnP (Universal Plug and Play) function.
- After connecting the network camera, set <Quick connect> of <Samsung DDNS> to <On> in the "Setup → Network → DDNS" menu.

</tbody>
</table>

- Above sample instructions are based on the CISCO’s Broadband Router.
- The settings may differ depending on the connected Broadband Router model.
  For more information, refer to the user manual of the applicable router.
CONNECTING TO THE CAMERA FROM A SHARED LOCAL PC

1. Run the IP Installer.
   It will scan for connected cameras and display them as a list.
2. Double-click a camera to access.
   The Internet browser starts and connects to the camera.

Access to the camera can also be gained by typing the camera's IP address in the address bar of the Internet browser.

CONNECTING TO THE CAMERA FROM A REMOTE PC VIA THE INTERNET

Since using the IP Installer on a remote computer that is not in the Broadband Router’s network cluster is not allowed, users can access cameras within a Broadband Router’s network by using the camera’s DDNS URL.

1. Before you can access a camera in the Broadband Router network, you should have set the port range forward for the Broadband Router.
2. From the remote PC, launch the Internet browser and type the DDNS URL address of the camera, or the IP address of the Broadband Router in the address bar.
   ex) http://www.samsungipolis.com/Product ID

For registering the DDNS settings, refer to “Registering with DDNS”. (page 49)
CONNECTING TO THE CAMERA

Normally, you would

1. Launch the Internet browser.
2. Type the IP address of the camera in the address bar.
   ```
   • IP address (IPv4) : 192.168.1.100 → http://192.168.1.100
   • IP address (IPv6) : 2001:230:abcd::ff::ff::ff:1111
   ```

If the HTTP port is other than 80

1. Launch the Internet browser.
2. Type the IP address and HTTP port number of the camera in the address bar.
   ```
   • IP address : 192.168.1.100:HTTP Port number(8080)
   ```

Using URL

1. Launch the Internet browser.
2. Type the DDNS URL of the camera in the address bar.
   ```
   • URL address : http://www.samsungipolis.com/Product ID
     → http://www.samsungipolis.com/Product ID - the Login dialog should appear.
   ```

- Network connection is disabled in the LAN only environment.

Connecting via UPnP

1. Run the client or operating system in support of the UPnP protocol.
2. Click the camera name for search.
   - The login window is displayed.

Connecting via Bonjour

1. Run the client or operating system in support of the Bonjour protocol.
2. Click the camera name for search.
   - In the Mac operating system, click the camera name searched from the Bonjour tab of Safari.
   - The login window is displayed.

To check the DDNS address

If the camera is connected directly to the DHCP cable modem, DSL modem, or PPPoE modem, the IP address of your network will be changed each time you try to connect to the ISP (Internet Service Provider) server.
If this is the case, you will not be informed of the IP address changed by DDNS.
Once you register a dynamic IP-based device with the DDNS server, you can easily check the changed IP when you try to access the device.
To register your device to the DDNS server, visit www.samsungipolis.com and register your device first, and then set the Web Viewer’s <Network> - <DDNS> to <Samsung DDNS>, as well as providing <Product ID> that had been used for DDNS registration.
**PASSWORD SETTING**

When you access the product for the first time, you must register the login password.

When the "Password change" window appears, enter the new password.

- For a new password with 8 to 9 digits, you must use at least 3 of the following: uppercase/lowercase letters, numbers and special characters. For a password with 10 to 15 digits, you must use at least 2 types of those mentioned.
  - Special characters that are allowed. : ~`!@#$%^*()_-+=|{}[].?/
- For higher security, you are not recommended to repeat the same characters or consecutive keyboard inputs for your passwords.
- If you lost your password, you can press the [RESET] button to initialize the product. So, don’t lose your password by using a memo pad or memorizing it.

**LOGIN**

Whenever you access the camera, the login window appears. Enter the User ID and password to access the camera.

1. Enter "admin" in the <User name> input box. The administrator ID, "admin", is fixed and cannot be changed.
2. Enter the password in the <Password> input field.
3. Click [OK].

If you have logged in successfully, you will the Live Viewer screen.

- When you access the camera web viewer, pay special attention to the security by checking whether the image data is encrypted.

- If you check the "Remember my credentials" option when your input is done, in future you will be logged in automatically without being prompted to enter the login information.

- You will experience the best video quality if the screen size is 100%. Reducing the ratio may cut the image on the borders.

**PLUG-IN SUPPORT SPECIFICATIONS FOR EACH BROWSER**

The existing plug-in web viewer and a new plug-in free web viewer is embedded together. Therefore, it is possible to use the web viewer even in the latest browser environment that does not support plug-ins such as Chrome and EDGE.

According to the browser environment, the following differences may be observed.

- **Chrome, EDGE browser**: Although they don’t support plug-ins, you can use a web viewer as a plug-in free web viewer is embedded.
  - Since the plug-in free webviewer has lower performance than the plug-in webviewer, it has a limit on the monitoring of high quality profiles. In addition, the plug-in free webviewer does not support the audio function.
    - Plug-in free profile: A profile of H.264 20 FPS HD(1280x720) resolution, which is optimal for the plug-in free webviewer.
    - Plug-in free profile generation conditions: A plug-in free profile is generated when the selected profile is H.264 20fps or higher (H.264/FHD 10fps or higher (H.265)/FHD 10fps or higher (MJPEG).
    - Plug-in free playback conditions: A recorded video with an HD resolution or lower
  - In the following cases, the detection performance may be impaired or a malfunction may occur.
    - Monotonous monitoring environment, night or low illumination environment
    - Severe camera wobbling and sudden changes in illumination

- **IE, Firefox, or Safari browser**: You can use a web viewer even if you don’t install the existing plug-in web viewer.
  - To monitor/play saved video seamlessly, you are required to install a plug-in.
  - In the following cases, the detection performance may be impaired or a malfunction may occur.
    - Monotonous monitoring environment, night or low illumination environment
    - Severe camera wobbling and sudden changes in illumination
INSTALLING WebViewer PLUGIN

To access to the plug-in webviewer and play a live video (H.264/H.265) or a recorded video, an installation message will be prompted. At this time you need to install the webviewer plug-in to use the function properly.

1. When the monitoring page is accessed for the very first time, the installation page is displayed. Click [Click Here] to begin installation.
   - If the plug-in installation file download status is suspended at 99% in the Internet Explorer browser, retry it after selecting “Release SmartScreen filter” in “Tool → SmartScreen filter”.
2. Click [Run] in the message window.
3. Click [Yes] when the notice window saying that all browser windows will be closed.
4. When the old version of the Web Viewer Plug-in is installed, a notice window saying the old version will be deleted is displayed.
   - Click [Yes] when the notice window is displayed.
5. Click [OK].
   - The old version of Web Viewer Plug-in is deleted.
6. Click [Install] to begin installation of the Web Viewer Plug-in.
7. Click [Finish].
   - Web Viewer Plug-in installation is completed.

   In your internet explorer, if you need to move to the installation screen after installing the webviewer plugin, check whether webviewer_activexplugin_3b.control in the “Tool → Additional Function Management” menu is “Activated”. If not, and if there is a persisting problem, then select “Tools → Internet Options → General” and delete all the search records.

USING A PLUG-IN FREE WEBVIEWER

If you access the camera from Google Chrome or MS Edge web browser, you can check and control the camera image in real time without installing separate plug-in(s).

1. Enter your username and password to log in.
2. When you are logged in, a camera live view screen appears.

   Authentication Required
   This function requires a camera management license.
   If no camera is not installed.

   Enter name:  
   Resume:  

   Setup
   Move to the Setup screen.

   Camera Model Name
   Displays the model name of the camera accessed.

   Viewer Screen
   Displays the Live video on the screen.
   ● You can use the mouse wheel to activate the digital zooming in Viewer screen.

   Switch View Mode
   - FR (  ) A view mode in which the size of the camera video automatically fits to the web browser size.
   - Original Size (  ) View mode in which the video is played in the actual resolution.
   - Aspect Ratio (  ) View mode that adjusts the aspect ratio to best fit the resolution.
   - Full Screen Double click on the video screen, and the current video will be played in the full screen of the monitor.

   Playback
   Move to the screen where you can search for the video recording saved in your Micro SD memory card or NAS.
   ● To search a recorded video, go to the play screen, place the mouse over the video and double click.

   Item   Description
   1  Setup   Move to the Setup screen.
   2  Camera Model Name   Displays the model name of the camera accessed.
   3  Viewer Screen   Displays the Live video on the screen.
   "  You can use the mouse wheel to activate the digital zooming in Viewer screen.
   4  Switch View Mode
   ● FR (  ) A view mode in which the size of the camera video automatically fits to the web browser size.
   Original Size (  ) View mode in which the video is played in the actual resolution.
   Aspect Ratio (  ) View mode that adjusts the aspect ratio to best fit the resolution.
   Full Screen Double click on the video screen, and the current video will be played in the full screen of the monitor.
   5  Playback   Move to the screen where you can search for the video recording saved in your Micro SD memory card or NAS.
   ● To search a recorded video, go to the play screen, place the mouse over the video and double click.
### Item Description

</tr>
</tbody>
</table>

To capture the snapshot
1. Click [Capture (Capture)] on the scene to capture.
2. When a captured video is saved, a notification message appears.
   The captured image is saved in the designated folder for each browser.

   - If the screen is not captured by IE browser in Windows 7 or higher, run the IE Browser with the Admin privilege.

How to record videos manually
2. To end the recording, press [Manual recording (Manual recording)] again.

   - You can save the recorded file on the PC in an avi file format. Designate a path and save the video.

To fit the full screen
1. Click the [Full Screen (Full Screen)] button.
2. This will fit the Viewer to the full screen.
3. To exit the full screen mode, press [Esc] on the keyboard.

To Use Audio
1. Click [Audio (Audio)] icon to activate audio communication.
2. Use [ ] bar to control the volume.

   - If there is no sound from pulling in and out the audio jack while it is in operation, click the [Audio (Audio)] icon to enable it again.

To count the number of pixels
1. Click the [On (On)] icon to activate it.
2. Drag the mouse on the video to select an area.
3. The number of pixels in the selected area is displayed on the screen.
Before you can play the video, you must configure the record settings. For details on record settings, refer to “Storage”. (page 53)

To search a date-specific recorded video, move to the play screen, place the mouse over the video and double click.

</tbody>
</table>

### To play after searching by time

1. On the live screen, click the |Show (  )| button.
2. Place the mouse over the video and double click. The screen changes to full screen.
3. Click the |Search ( )| icon.
4. On the calendar, set the search date, start time and end time. The event searched is displayed on the time bar.
5. To perform an event-specific search, click the |All| button at the bottom of the time bar to select an event type.
6. Click the |Play ( )| button. The video at the selected time will be played.
7. When a video is played, the recording time of the video currently being played is displayed.
8. Search the video forward and backward and adjust the playback speed.
   - How to Move Playback Interval
     Select the [ ] button to move 1 frame forward/backward.
   - How to Control Playback Speed
     When you click the 1x, 2x, 4x, or 8x button, the playback speed increases accordingly.
     When you click the -1x, -2x, -4x, or -8x button, the playback speed decreases -1x, -2x, -4x or -8x and the rewind speed increases.
9. Move the position of the [Time Bar ( )] to play the video at a desired time.
PLAYING THE RecorderD VIDEo (PLUG-IN WEBVIEWER)

Before you can play the video, you must configure the record settings. For details on record settings, refer to “Storage” (page 53).

Name of event search screen and its function

1. Search range setting
   Set the search date and time range for data saved in your Micro SD memory card or NAS.

2. Search event setting
   Set the event type to search within the search period.

3. Event search
   Run the event search.

To play the content after searching by event

1. Click the [Playback ( )] button.
2. Specify the start time and end time of your search.
3. Select an event type for your search within the specified period.
4. Click the [Event search] button.
   The search results will be displayed in the list.

   - If more than 800 events are recorded within the search period, your search will be limited up to the date when the 800th event is recorded.
   
   For instance, if the search period is between 10th and 15th day of the month, and more than 800 events were recorded 10th through 11th, your search will be limited up to 11th day with a total of 800 events, and events after then (from 12th) will not be found.

5. Select a data item to play in the search list.
6. Click the [Play ( )] button.
7. To stop playing the video, click [Stop ( )].
8. To return to the search screen, click [Exit ( )].
### Name of time search screen and its function

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Time bar</td>
<td>The section in the specific period is played by moving the time bar.</td>
</tr>
<tr>
<td>2 Search date setting</td>
<td>Set the search date using the calendar. If there is data saved in your Micro SD memory card or NAS on the day, it is marked as a box on the calendar.</td>
</tr>
<tr>
<td>3 Audio</td>
<td>To listen to a voice signal (if present) in the recorded video, then activate the voice signal icon when you play it.</td>
</tr>
<tr>
<td>4 Screen optimization</td>
<td>The camera image is converted to fit the Web browser window.</td>
</tr>
<tr>
<td>5 Fix the resolution</td>
<td>Regardless of the resolution setup configured in the camera, it sets the resolution to 800x600. Press it again to switch back to the default resolution.</td>
</tr>
<tr>
<td>6 Capture</td>
<td>The current image is saved as a .jpg image file.</td>
</tr>
<tr>
<td>7 Full screen</td>
<td>The current image is converted to cover the maximum size of the monitor.</td>
</tr>
<tr>
<td>8 Video information</td>
<td>Time data of the replayed video is displayed on the screen.</td>
</tr>
<tr>
<td>9 Backup</td>
<td>Set the desired date to make a backup copy of video data saved in your Micro SD memory card or NAS. You can set up to 5 minutes for the backup of a saved video.</td>
</tr>
</tbody>
</table>

### To play after searching by time

1. Click [Time Search ( )].
2. Click a desired date in the calendar. The video on the specified date will be played.
3. If the video playback is stopped, select a time and click [Play ( )]. The video on the selected time will be played.
4. While the video is being played, the recording time for the current video will be shown.
5. Search for the video forward or backward, and control the play speed.
   - How to Control the Play Interval
     - Select this button to move 1 frame forward.
     - Select this button to move 1 second back.
   - To control the play speed
     If selecting , the button will switch to x1, x2, x4, x8, and the play speed will increase accordingly. When you select the button, the playback speed decreases -1x, -2x, -4x or -8x and the rewind speed increases.
   - To control the playback direction
     If you see the button with the play speed displayed, the video will be played forward; Whereas, if you see the button with the play speed displayed, the video will be played backward.
   - How to set the time bar
     If you press the button, the details of the time bar section can be viewed. If you press the button, you can view a wider range of times and the desired time can be selected more easily.
6. Move (Time bar ( )) to a desired time point of the video before playing it. The time containing a normal recording file will be highlighted in blue; the time with the event recording will be highlighted in red.

### To back up the searched video

1. During playback, click ( ) on the scene to back up. The scheduling window for backup start and end time appears.
2. Click ( ) button. The Save As window appears.
3. Confirm the save path and click [Save] button. The screenshot will be backed up to the specified path.
To play the backup video

The backed up images are saved in an .avi format. Gom Player, VLC Player, and Window Media Player are recommended as the media player compatible with this format.

- In case of Windows Media Player, download the latest codec from www.windows7codecs.com and install it prior to use.

To Play an AVI File

(1) Micro SD memory card

1. Separate the Micro SD memory card from the camera.
   - Before separating the Micro SD memory card, set the <Device> to <Off> in the "Setup → Event → Storage" menu.
2. Insert the Micro SD memory card into the PC.
3. Play the AVI file in the "ch00\img\YYYY_mm_DD\avi" directory, using a media player.
   - A filename starts with the format "001_YYYYMMDD_HHMMSS.avi" and the file number is incremented by one.
   - YYYYMMDD_HHMMSS indicates the start time of data saving.
   - "001_YYYYMMDD_HHMMSS.smi" file is a caption file, and you can view it if it exists in the same directory as its related AVI file.
   - The max recording time per AVI file is 5 minutes.
   - Once corrupted, the data in the Micro SD memory card cannot be replayed in the Web Viewer's [Playback].

(2) NAS (Network-Attached Storage)

1. In Windows browser, use \<ip address>\ to access.
   ex)\\192.168.20.31\defaultfolder\ch01\img\2013_07_02\AVI
2. Go to <Computer> → <Network drive connection> → Enter 1.
3. Connected to the NAS.
   The directory structure is same as the directory structure for a Micro SD memory card.
   - A filename starts with the format "001_YYYYMMDD_HHMMSS.avi" and the file number is incremented by one.
   - YYYYMMDD_HHMMSS indicates the start time of data saving.
   - "001_YYYYMMDD_HHMMSS.smi" file is a caption file, and you can view it if it exists in the same directory as its related AVI file.
   - The max recording time per AVI file is 30 minutes.
   - If you change or damage the saved data on your own, it will not play back or save properly.
On the network, you can set up basic information on the camera, video and audio, network events and system.

1. On the live screen, click the [Menu (梡)] button.
2. On the menu list, click the [Setup (梤)] tab.
3. The Setup screen appears.

**BASIC SETUP**

**Video profile**

1. From the Setup menu, select the <Basic (梤)> tab.
2. Click <Video profile>.
3. Set the <Video profile connection policy>.
   - Keep connection when profile setting is changed: Output uses the same settings even when the settings of the active profile are changed. If not selected, changing a profile used by an existing connection resets such connection.
4. Select each profile properties.
   For more details, refer to "To Add/Change the Video Profile". (Page 41)
5. Click the input box of each item and enter / select a desired value.
   - The context menu may differ depending on the selected codec type.
   - Default profile: If no profile is selected when using the Web Viewer, the default video profile is applied.
   - E-mail/FTP profile: Video profile to be transferred to the specified email or FTP site.
   - Only the MJPEG codec can be set as the E-mail/FTP profile.
   - Record profile: This is the profile that is applied to video recording.
6. Select whether or not to input audio in the video.
   Select the <Audio-In> check box and you can input audio in the video.
7. According to your situation, set ATC (Auto Transmit Control) mode.
   - ATC mode: It adjusts the video properties according to the variance in the network bandwidth, controlling the bit rate. Adjusting the bit rate depends on the ATC mode.
     - Control framerate: Reduce the frame rate if the network bandwidth drops down.
     - Control compression: Control the compression rate if the network bandwidth drops down.
     - Event(MD): Activated when the motion detection (MD) event is set. Frame rate is adjusted when an event occurs.
     - If no motion is detected in the surrounding area, the minimum amount of frames is output to save the bandwidth use.
   - If <Bitrate control> is set to <CBR>, the encoding priority according to the ATC mode will be fixed as below:
     - ATC sensitivity: Affect the transfer rate according to the variance in the network bandwidth.
     - ATC limit: If the quality or frame rate is adjusted, the property will be changed to the applied value (%) against the previous setting value (100%). Note that if you reduce the property value too much, you may encounter flickering on the screen. So it is advisable to adjust the value within the threshold.

   ! It is recommended to apply ATC control only for cameras supporting ATC.
   - Set the ATC sensitivity to <Very low>: In a network environment with high variance in the network bandwidth.
   - If the network connection is unstable, you may encounter flickering on the screen.
8. When done, click [Apply (梯)].
To Add/Change the Video Profile

The profile setup can be added or modified to accommodate various profiles depending on the recording conditions.

1. In <Video profile>, click the <Add> button.
2. Provide the name and select a codec.
3. Specify the conditions under which the codec will be applied.
4. Specify the details of the selected codec including resolution and frame rate.
   Click the <Show> button to display detailed items.
   • Resolution : Set the video size of the H.264/H.265 and MJPEG files.
   • Framerate : Set the max number of video frames per sec.
   • Maximum bitrate : Set the max bit rate of video when the bit rate control is set to VBR.
   - As the bit rate can be adjusted limitedly according to the resolution, frame rate and screen complexity, the actual bit rate can be greater than the maximum bit rate. So you must consider the use conditions when setting the value.
   • Target bitrate : Set the target bit rate when the bit rate control is set to CBR.
   • Bitrate control : You can select one from constant bit rate and variable bit rate for compression. Fixed bitrate means that the network transmission bitrate is fixed while varying the video quality or frame rate, variable bitrate means that a higher priority is placed on the video quality while varying the bitrate.
   - After setting the fixed bit rate for bit control, if you select the video quality priority mode, depending on the complexity of the screen, the actual transmitted frame rate may differ from the frame rate setup in order to guarantee the optimal video quality for the given bit rate.
   • Encoding priority : You can set the priority of video transmission to frame rate or compression.
   • GOV length : It specifies the distance (in terms of number of frames) between two consecutive I-Frames in a video sequence when H.264/H.265 codec was selected. (One I-Frame + 0~Several P-Frames)
   • Profile : You can select the H.264/H.265 profiling method.
   • Entropy coding : Reduce the possible compression loss due to encoding.
   • Dynamic GOV : When the bit rate control is VBR in H.264/H.265 codec, it makes the GOV length automatically change to the set value of the maximum dynamic GOV.
   • Multicast(SVNP) : Specify the use of the SVNP protocol.
     - IP address : Enter an IPv4 address with which you can connect to the IPv4 network.
     - Port : Specify the video communication port.
     - TTL : Set the TTL for the SVNP packet.
   • Multicast(RTSP) : Specify the use of the RTSP protocol.
     - IP address : Enter an IPv4 address with which you can connect to the IPv4 network.
     - Port : Specify the video communication port.
     - TTL : You can set the TTL for the RTP packet.
   - If you set the Multicast address to 224.0.0.0~224.0.0.255, multicast may not work properly in all environments. In that case, we recommend you change the multicast address.

What is GOV length?
GOV(Group of Video object planes) is a set of video frames for H.264/H.265 compression, indicating a collection of frames from the initial I-Frame (key frame) to the next I-Frame. GOV consists of 2 kinds of frames: I-Frame and P-Frame.
I-Frame is the basic frame for the compression, also known as Key Frame, which contains one complete image data. P-Frame contains only the data that has changed from the preceding I-Frame.
For H.264/H.265 codec, you can determine the GOV length.
If you set a recording profile with H.264/H.265 codec, the GOV length will be framerate/2.

What is dynamic GOV?
Dynamic GOV is a function that enables the GOV to automatically change in a range from the set value of the minimum GOV length to the maximum dynamic GOV set value according to the situation of the video.
In a video with almost no motion, GOV operates with the dynamic GOV settings, which makes the bit rate of the entire video reduced. The I-frame is output right after a motion is detected and GOV operates with the GOV length settings until the motion disappears.
If you use this function, the GOV of a video operates with the minimum GOV length settings.
User

1. From the Setup menu, select the <Basic ( > tab.
2. Click <User>.
3. Provide the necessary user information.
   • Administrator password change: Change the password for the administrator.
     - For the security purposes, you are recommended to use a combination of numbers, alphabets uppercase and lowercase and special characters for your password.
     - It is recommended to change your password once every three months.
     - The password length and limits are shown as follows.
       - A combination of at least three types of upper case, lower case, numeric, and special characters: 8 to 9 characters.
       - A combination of at least two types of upper case, lower case, numeric, and special characters: 10 to 15 characters.
     - Should be different from the ID.
     - Cannot repeat the same letter, number of special characters more than 4 times.
     - Don’t use 4 or more characters consecutive together. (examples : 1234, abcd)
     - Don’t use 4 or more characters repeated. (examples : !!!!, 1111, aaaa)
     - Special characters that are allowed: ~`!@#$%^*()_-+=|{}[].?/
     - After the factory setting, the admin and user passwords are initialized. You need to reset the password.
     - When you access the camera web page for the first time or access it after the initialization, you will be moved to the admin password setting menu.
     - In this menu, you need to login again with the new password before using the camera web page menus.
     - If the existing password is not matched, when you change the admin password, you cannot change the password.
     - After changing your password, if there is a camera connected to a CMS or NVR client, then you need to re-register it with the newly changed password. If the camera is still connected with the same password, then the account may be locked because a client uses the previous password.
     - If you try to login with the registered account, 5 or more consecutive password authentication has failed, and then the account may be locked for thirty seconds.
     - Current users: If you select <Use>, you can set or change the user permissions.
       ■ The manager can set up audio input and alarm output.
       ■ Audio input/Alarm output: You can enable/disable Audio input/Alarm output in the live mode on the current user account.
     - Profile: If you select <Default>, you can only see the default profile video; if selecting <All>, you can see the full profile videos.
   • Guest setup: If you select <Enable guest access>, the guest account can access the Web viewer screen but can only view the live Viewer screen.
     ■ The ID/password for the guest account is <guest/guest>, which cannot be changed.
   • Authentication setup: If you select <Enable RTSP connection without authentication>, you can access RTSP without logging in and view the video.

Date & Time

1. From the Setup menu, select the <Basic ( > tab.
2. Click <Date & Time>.
3. Specify the time and date that will be applied to the camera.
   • Current system time: Displays the current time settings of your system.
     ■ Timezone: Specify the local time zone based on the GMT.
     ■ Use daylight saving time: If checked, the time will be set one hour before the local time zone for the specified time period. This option will be displayed only in areas where DST is applied.
     ■ System time setup: Specify the time and date that will be applied to your system.
       - Manual: Sets the current time of the camera manually. When you select the <Synchronize with PC viewer> check box, the time of the webviewer is set to the time displayed on the PC that runs the webviewer.
       - Synchronize with NTP server: Sync with the time of the specified server address.
4. When done, click <Apply ( apply )>.
IP & Port
1. From the Setup menu, select the <Basic ( )> tab.
2. Click <IP & Port>.
3. Click <IP address>.
4. Set the <IPv4 setup>.
   - IP type : Select an IP connection type.
     - Manual : Specify the IP address, Subnet mask, Gateway, DNS1, and DNS2.
     - DHCP : Specify the DNS1 and DNS2.
     - PPPoE : Specify the DNS1, DNS2, ID and Password.
     - If you set it to <Manual>, you should specify the IP, Subnet mask, Gateway, DNS 1 & 2 manually.
   - MAC address : Shows the MAC address.
   - IP address : Displays the current IP address.
   - Subnet mask : Displays the <Subnet mask> for the set IP.
   - Gateway : Displays the <Gateway> for the set IP.
   - DNS1/DNS2 : Displays the DNS(Domain Name Service) server address.
5. Set the <IPv6 setup>.
   - Set to <Use> to use IPv6 address.
   - Default : Use the default IPv6 address.
   - DHCP : Display and use the IPv6 address obtained from the DHCP server.
   - Manual : Enter IP address and gateway manually and use it.

   The IP addressing system will be defaulted to DHCP. If no DHCP server is found, the previous settings will be restored automatically.
   - Once completed with editing, click [Apply ( )] to apply changes and the browser exits. After a while, connect again with the changed IP.

6. Click <Port>.
7. Type in each item in the Port menu as necessary.
   - Neither the port range between 0 and 1023 nor port 3702 is available.
   - HTTP : HTTP port used to access the camera via the web browser.
     The default is 80(TCP).
     Setting the HTTP port for Safari and Google Chrome browsers to 65535 is not allowed by security policy.
   - HTTPS : In this version, the security of the web communication protocol HTTP is strengthened. It can be used when you set HTTPS mode in SSL.
     The initial value is set to 443(TCP).
     The available setting range is 1024~65535. (For security reasons, in your Safari or Google Chrome browser, you may not use 65535 as your HTTPS port.)
   - RTSP : Used to transfer videos in the RTSP mode; the default is 554.
   - Use timeout : When connecting to RTSP, this function resets the connection if there's no response for a certain time.
   - Device port : Set a port used to transfer video signals with the Hanwha Techwin protocols.

   - If changed the HTTP port, the browser exits.
   - Afterwards, address should contain the newly assigned HTTP port trailing the IP.
     ex) IP address: 192.168.1.100, HTTP port : Assigned 8080 → http://192.168.1.100:8080
     (If HTTP port is set to 80, no need to specify the port number)
   - Using RTSP and HTTPS is recommended in order to prevent the image information from being restored.
8. When done, click [Apply ( )].

Event setup
You can easily set the event detection items, and move to the detailed setting.
1. From the Setup menu, select the <Basic ( )> tab.
2. Click <Event setup>.
3. Activate desired items on the Event list.
4. When done, click [Apply ( )].

   To configure detailed event settings, click a desired type. You will be redirected to the detailed settings.
**Audio & Video Setup**

### Video Setup

1. From the Setup menu, select the `<Audio & Video>` tab.
2. Click `<Video setup>`.
3. Select a `<Video source>` mode.
   - **Flip mode**: Turn upside down the image that is captured by the camera.
   - **Mirror mode**: Flip horizontal the image that is captured by the camera.
   - **Hallway view**: Rotates the video captured by the camera according to the set angle.
     - If you change settings, the browser window will be closed and the camera restarted. Please access again later.

4. Specify the privacy zone.
5. When done, click [Apply].

### To Set the Privacy Zone

You can specify a certain area of the camera video to be protected for your privacy.

1. Set it to `<On>`.
2. Click [Apply].
3. Drag the mouse over the video to select an area.
4. Enter the name and select the color, and then click [OK].
5. If you want to delete a name in the list, select it and click [Delete].

### Audio Setup (QND-6070R)

You can set the input value of the audio connected to the camera.

1. From the Setup menu, select the `<Audio & Video>` tab.
2. Click `<Audio setup>`.
3. Set the audio input value.
   - **Source**: Sets the audio input.
     - **Line**: Connect the cable to the audio device.
     - **External microphone**: Uses an external microphone.
   - **Apply power to Ext. Mic.**: Select this check box when the external microphone is not powered, and the power will be supplied from the camera to the microphone. You can configure settings when selecting `<External microphone>`.
   - **Codec**: Specify the audio codec.
     - **G.711**: A audio codec standard, it uses 64 Kbps PCM (Pulse Code Modulation) encoding.ITU standard audio codec that is adequate for digital voice transfer in PSTN network or through a PBX.
     - **G.726**: ITU standard audio codec applying ADPCM (Adaptive Differential Pulse Code Modulation) for variable bit rates of 40/32/24/16 Kbps to 64 Kbps PCM encoding.
   - **Bitrate**: Set the bit rate to differentiate compression ratio if using G.726 codec.
   - **Gain**: Specify the audio input amplification.
4. When done, click [Apply].
**Camera setup**

You can change the camera settings according to the environment where the camera is located.

1. From the Setup menu, select the `<Audio & Video (🗂)>` tab.
2. Click `<Camera setup>`.
3. Configure the settings as necessary of : Image preset, Sensor, SSDR, White balance, Back light, Exposure, Day/Night, Special, OSD, IR
4. When done, click [Apply (_tick) ].

   - If a certain time (timeout: 240s) is elapsed with your not pressing the [Apply (_tick) ] button after changing the settings, your changes will not be applied.

If you want to set an image preset

Users can set presets easily.
The selected image preset mode will be in operation during the configured period, but at other times the values configured in the user preset mode are reflected.

1. Select a desired mode from the image presets.
   - **Definition focus** : This is the factory setting for your camera. Select it for video recording, focusing on reproducibility.
   - **Motion focus** : Record a moving object clearly. If there are many moving objects, such as on a road or in a crowded place like a museum, select this option.
     - Noise level can increase in a low illumination environment, and sensitivity can go down.
   - **Reduced noise** : Select this when you need a video with low noise in the low illumination environment.
   - **Bright video** : This makes the dark area in a full video brighter.
     - Video contracts effects are reduced.
   - **Motion focus&Reduced noise** : Use this when there are many moving objects, such as on a road or in a crowded place like a museum, or when you need a video with low noise in a low illumination environment.
   - **Motion focus&Bright video** : Use it when there are many moving objects, such as on a road or in a crowded place like a museum, or when you need to make a dark area in full video brighter.
   - **Vivid video** : Makes the entire video displayed in vivid colors.
     - The contrast of the video reduces and the color reproducibility becomes low.
   - **User preset** : Select it if you want to display video with settings chosen by you.
     - When selecting a mode other than the preset mode, you can’t set the shutter speed, AGC, SSDR, SSNR and color.

2. Set the camera item for each image preset mode.
3. Set the `<Activation time>`.
   - Off : Your camera will execute a specific image preset operation at all times.
   - Only scheduled time : Your camera will execute a specific image preset operation for the time period set by you on each date.
4. Click the [Setup (Setup)] button.
5. Set the `<Mode>` and `<Time>`.
6. When done, click [Apply (Tick)].

### Initial setting for each image preset mode

<table>
<thead>
<tr>
<th>Image preset</th>
<th>Minimum shutter</th>
<th>Maximum shutter</th>

</table>

- The preset setup functions as an aid to users to configure setup. If you don’t want the preset function, deactivate it before use.
- If you change the image preset, only shutter/AGC/SSDR/SSNR/COLOR are reset to the default value for each model.
- The “Camera Setting” value does not change between presets.
To Set the Sensor

It specifies how many frames the camera CMOS sensor will capture per second.

1. Select <Sensor>.
2. Select <Mode>.

- Refer to “Video profile” for the framerate setup range of the <Video profile> according to mode setup. (Page 40)

To Set SSDR (Samsung Super Dynamic Range)

In a scene where the difference between bright and dark is severe, you can increase the brightness of the dark area alone to regulate the overall brightness.

1. Select <SSDr>.
2. Set <Mode> to <On>.
3. Configure the <Level> and <D-Range> settings as necessary.
   - Level : Adjust the level of the dynamic range.
   - D-Range : Select the amplitude area of the dynamic range.

To Set White Balance

You can correct the image colors based on white under any lighting conditions.

1. Select <White balance>.
2. Select <Mode>.
   - ATW : Corrects the colors of the camera video automatically.
   - Manual : You can adjust the red and blue gains of the camera video manually.
   - Outdoor : Automatically corrects the video colors of the camera to be optimized to the outdoor environment.
   - Indoor : Automatically corrects the video colors of the camera to be optimized to the indoor environment.
   - AWC : Corrects the colors of the camera video to be optimized to the current lighting condition and screen mode.

To obtain the optimal condition for the current lighting, put the focus of the camera to a white paper and press the [Set] button. If the lighting environment is changed, you should readjust the settings accordingly.

- In AWC mode, click the [Set] button if you want to keep the white balance level of the current image.

- The white balancing may not work properly in the following conditions:
  - If this is the case, switch to AWC mode.
  - If the surrounding condition of the object is out of the temperature correction range ex) Clear sky, sunset
  - If the surrounding of the object is dark
  - If the focus of the camera directly faces the fluorescent lighting or if the camera is installed in a place of variable illumination, the white balancing operation may be unstable.

To Set BLC

You can specify a desired area on the video manually and set the area to be displayed more clearly.

1. Select <Back light>.
2. Set <Mode> to <BLC>.
3. Set <BLC level>.
   You can change the level to adjust the brightness of the monitoring area.
4. Set the <Top, Bottom, Left, Right> levels to specify the target area.

- When setting BLC, a green box is displayed on the screen for 15 seconds.
- To prevent malfunction at the time of BLC setup, the vertical space of the BLC area should be over 40 and below 60 while the horizontal space over 30 and below 60.

To Set WDR

It displays a sharp image of the objects in a scene where both bright and dark areas exist.

1. Select <Back light>.
2. Set <Mode> to <WDR>.
3. Specify the <WDR level>.

- It is recommended to use WDR in the indoor environment.
- Noise may exist between the dark area and the bright area in the WDR mode.
- The maximum and minimum shutter values are initialized whenever you turn on or off the WDR mode.
- When using WDR, the frame rate reduces by half.
  Example) When using a 30fps mode and the WDR mode, a video of 15fps is output.
To Set Exposure

You can adjust the exposure level of the camera.

1. Select <Exposure>.

2. Select each item and set it properly.
   - Brightness : Adjust the screen brightness.
   - Minimum shutter : The limit of the longest exposure time.
     - Shutter is the mode to set up the range of the sensor exposure time which will specify the upper and lower limits for the electronic shutter movement.
     - The framerate may be reduced in the dark condition if Shutter has a lower value than specified in the Sensor mode.
   - Maximum shutter : The limit of the shortest exposure time.
   - Anti flicker : It prevents screen flickering incurring from the dissonance between the surrounding lighting and the frequency.
   - SSNR : Noise of the video is removed.
   - SSNR level : Adjust the noise reduction level.
   - AGC : Select AGC Control mode.
     Adjust the gain value of the video (that, in particular, was recorded at a low contrast scene and had a lower brightness level than normal) to control the video brightness.
     - The image exposure can be saturated depending on the Shutter setup range.

To Set Day/Night

1. Select <Day/Night>.

2. Select each item and set it properly.
   - Mode : Mode is used to adjust the color of Color or Black and White.
     - Color : The video is always output in color.
     - B/W : The video is always output in black and white.
     - Auto : Normally, it is set to Color but to B&W under low luminance at night.
     - External : It controls the color of the video when the alarm input terminal is synchronized with an external device.
     - Schedule : Set the time during which the camera is operated in the color mode.
   - Dwell Time : It specifies the period for which the selected brightness condition must be maintained to switch the lighting mode from Day to Night or vice versa.
   - Duration : It specifies the interval of lighting mode conversion.
   - Alarm in : The video is set to Color or B/W as the alarm sensor is open or closed.
     - If the Day/Night mode is set to External Input, the alarm input function of the Event-Alarm Input page is disabled.
   - Activation time(Color) : It specifies the schedule for color mode operation.
     - If it is set, the Color mode is maintained from 00 second of the starting time to 59 second of the ending time.

- When switching to the day/night mode, the motion detection mode does not work.
To Setup Special
1. Select <Special>.
2. Select each item and set it properly.
   - Sharpness : Adjust the overall sharpness of the image. If selecting <On>, you can adjust the sharpness of the image.
   - Sharpness level : The higher the level is, the sharper and clearer the outline of the image becomes.
   - Gamma : Adjust the contrast of the image.
   - Color level : Adjust the strength of video color.
   - LDC : Enables/Disables the image distortion correction.
   - LDC Level : Adjusts the degree of distortion correction.

To Set OSD
1. Select <OSD>.
2. Select each item and set it properly.
   - Camera title : It specifies the name of the camera to be displayed on the screen. Select the <Use> check box to add a camera name.
     - Add : Click the <Add> button and you can add a total of 5 lines, 15 characters per line and a total of 60 characters.
     - Preview : Click the <Preview> button to check the name of camera that will be displayed on the screen.
   - Camera title X, Y : It specifies the position of the camera name on the screen.
   - Date & time : Set the time display and date formats on the screen.
   - Date & Time X, Y : Specify the position of time display on the screen.
   - Weekday overlay : Specify the use of date display date on the screen.
   - Size : Sets the size of OSD to small/medium/large.
   - Color : Sets the color of the OSD to white/red/blue/green/black/gray.
   - Transparency : Sets the transparency to opaque/transparency 1/transparency 2/transparency 3.
   - Overlay image : The image selected by the user can be displayed at the top left of the screen.
     - Browse : Searches and selects a bitmap type file.
     - Upload : Uploads a selected file.
     - Remove : Deletes the selected file.

* The specifications of an applicable file include 16bit (RGB565 not supported) or 24bit bitmap file with a length of 128 pixel for the width and height and a file size of 52KB or less.

! A position-adjustable item (Camera title, Date & Time) may not be displayed normally if it overlaps with another fixed OSD item.

If you change the language, the X-Y coordinates are initialized.
It is recommended to set the X-Y coordinates after setting the language.

To Set IR
1. Select <IR>.
2. Select each item and set it properly.
   - Mode : When the IR indicator turns on in B/W mode, the screen will be protected from saturation on the center area so that you can identify a short-distant object.
     - Off : IR mode will be disabled.
     - Auto : Adjust the IR brightness according to the brightness of the object on the center screen.

WiseStream
Function to detect the complexity of the video in an environment in which no major motion is generated and adjust the video quality to lower the output bit rate. Returns the video quality to the original settings when a motion is generated to prevent video information loss.

1. From the Setup menu, select the <Audio & Video (>) tab.
2. Click <WiseStream>.
   - Off : Wise Stream function will be disabled.
   - Low : Reduces the image quality of the video slightly. When the bit rate is OFF, the image quality will be reduced up to 15%.
   - Medium : Reduces the image quality of the video to the medium level. When the bit rate is OFF, the image quality will be reduced up to 30%.
   - High : Reduces the image quality of the video considerably. When the bit rate is OFF, the image quality will be reduced up to 50%.
4. When done, click [Apply ( )].

* In the following cases, the WiseStream function may malfunction.
  - Sudden screen switch may cause distortion of the video.
  - It is not appropriate to use in an environment with too much movement and motion on the screen.
DDNS
DDNS is an abbreviation of Dynamic Domain Name Service that converts the IP address of a camera into a general Host Name so that the user can easily remember it.

! You can use the DDNS service only if the internet is connected.

1. From the Setup menu, select the <Network ( ))> tab.
2. Click <DDNS>.
3. Select the <DDNS> connection type.
4. Type in the DDNS items according to the selected type.
   - Samsung DDNS: Select this if you use the DDNS server provided by Hanwha Techwin.
     - Product ID: Enter the product ID that is registered with the Samsung DDNS service.
     - Quick connect: It sets port forwarding automatically when used with a UPnP (Universal Plug and Play) supporting router.
   - Public DDNS: Select one of provided public DDNS servers when you use a public DDNS server.
     - Service: Select desired public DDNS service server.
     - Host name: Enter the name of the host that is registered with the DDNS server.
     - User name: Enter the user name for the DDNS service.
     - Password: Enter the password for the DDNS service.

5. When done, click [Apply ( ]).

! If selected <Quick connect>, be sure to select Samsung DDNS service.

Registering with DDNS
To register your product with the Samsung DDNS

1. Visit the iPOLiS web site (www.samsungipolis.com) and sign in with a registered account.
2. From the top menu bar, select <DDNS SERVICE> - <MY DDNS>.
3. Click [PRODUCT REGISTRATION].
4. Enter the product ID.
   - You must perform the duplicate check for the ID that you entered.
5. Select a <CLASSIFICATION> and specify the <MODEL NUMBER>.
6. Specify the product location with a description if necessary.
7. Click [REGISTRATION].
   - The product will be added to the product list that you can check.
To connect to the Samsung DDNS in camera setup

1. From the DDNS setup page, set <DDNS> to <Samsung DDNS>.
2. Provide the <Product ID> that you registered product ID with the DDNS site.
3. Click [Apply ( Apply )].
   When the connection is successfully made, you will see the message of <Success> on the screen.

Confinguring public DDNS in Camera Settings

1. Open the DDNS settings page and select <Public DDNS> for <DDNS>.
2. Enter the corresponding site’s host name, user name and password.
3. Click [Apply ( Apply )] button.
   If the connection properly establishes, <Success> appears.
4. When done, click [Apply ( Apply )].
   To use DDNS service properly, both DDNS setup and the router’s port forwarding setup are required.
   For port forwarding setup, refer to “Port Range Forward (Port Mapping) Setup”. (page 28)

IP filtering

You can create a list of IPs that you want to grant or deny access to them.

1. From the Setup menu, select the <Network ( Network )> tab.
2. Click <IP filtering>.
3. Select <Filtering type>.
   • Deny : If selecting this, access from those IPs that are added to the filtering will be restricted.
   • Allow : If selecting this, access from only those IPs that are added to the filtering will be accepted.
4. Click the [Add ( Add )] button.
   The IP list will be created.
5. Provide the IP that you want to grant or deny access from.
   When you enter an IP address and a Prefix, the list of IP addresses available will appear in the right-side filter range column.

- If selected <Allow> for IP Filtering and <IPv6 setup> of <IP & Port> is set to <Use>, both IPv4 and IPv6 addresses of the computer currently configuring should be assigned.
- The IP address of the computer used for the current setup cannot be added to <Deny>, it should be added to <Allow>.
- Only the IP addresses that are set to <Use> will be displayed in the filter column.

6. Select an IP to delete from the list.
   Click the [Delete ( Delete )] button.
7. When done, click [Apply ( Apply )].

HTTPS

You can select a secure connection system or install the public certificate for this purpose.

1. From the Setup menu, select the <Network ( Network )> tab.
2. Click <HTTPS>.
3. Select a secure connection system.
   - To access the camera using HTTPS mode, you have to type the IP address for the camera in the form of "https://<Camera_IP>".
   - If you failed to configure the Web viewer settings in HTTPS mode with Internet Explorer, edit the Internet options as follows: <Menu > <Tools > <Internet Options > <Advanced > <Security > <Uncheck TLS 1.0, and check TLS 1.1, TLS 1.2>
4. Search for the public certificate that you want to install on the camera.
   To install the certificate on the camera, you need to provide a certificate name (it can be arbitrarily assigned by the user), certificate file issued from the certification authority and a key file.
   - The <HTTPS (Secure connection mode using the public certificate)> item will be active only if there exists a public certificate installed.
5. When done, click [Apply ( Apply )].

Installing the certificate

1. Enter the certificate name.
2. Click the [Browse ( Browse )] button, select the public certificate file and key file to be installed, and then click the [Install ( Install )] button.

Deleting the certificate

1. Click [Delete ( Delete )] button.
2. To delete a public certificate, you should access the network video decoder in the mode of <HTTP (Do not use secure connection)> or <HTTPS (Secure connection mode using a unique certificate)>.
802.1x
When connecting network, you can choose whether using 802.1x protocol, and then install the certification.

1. From the Setup menu, select the <Network ( )> tab.
2. Click <802.1x>.
3. Set the <IEEE 802.1x setting>.
   - IEEE 802.1x : Specify the use of the 802.1x protocol.
   - EAP type : Select EAP-TLS or LEAP.
   - EAPOL version : Select version 1 or 2.
   - ID : Enter the client certificate ID in EAP-TLS and the user ID in LEAP.
   - Password : Enter the client private key password in EAP-TLS and the user password in LEAP. You do not have to enter the password in EAP-TLS if it uses a key file that is not encrypted.

4. Install/remove the certificate.
   The certificate is needed only for EAP-TLS.
   - CA certificates : Select a public certificate that contains the public key.
   - Client certificate : Select a public certificate that contains the client certificate key.
   - Client private Key : Select a public certificate that contains the client private key.

5. When done, click [Apply ( )].

To install/remove 802.1x related certificates
1. Press the [Browse ( )] button for each item and select a certificate to install.
2. If no certificate is installed, you will see “Not Available” appearing next to the selected item.
3. Press the [Install ( )] button to start installation with a message of “Installed” next to the item.
4. Press the [Delete ( )] button to remove the certificate.

QoS
You can specify the priority to secure a stable transfer rate for a specific IP.

1. From the Setup menu, select the <Network ( )> tab.
2. Click <QoS>.
3. Click the [Add ( )] button.
The IP list will be created.
4. Enter an IP address to which you will apply QoS.

   - The default prefix for IPv4 is 32;
   - For DSCP, the default is set to 63.
   - Only the IP addresses that are set to <Use> can be prioritized.

5. Select an IP to delete from the list.
   Click the [Delete ( )] button.
6. When done, click [Apply ( )].

SNMP
With the SNMP protocols, the system or network admin can monitor the network devices on a remote site, and configure the environment settings.

1. From the Setup menu, select the <Network ( )> tab.
2. Click <SNMP>.
3. Specify the <SNMP>.
   - Enable SNMP v1 : SNMP version 1 will be active.
   - Enable SNMP v2c : SNMP version 2 will be active.
     - Read community : Provide the name of the read community where you can access to the SNMP information.
       The default name is <public>.
     - Write community : Provide the name of the write community where you can access to the SNMP information. The default name is <write>.
   - Enable SNMP v3 : SNMP version 3 will be active.
     - Password : Specify the default password for SNMP version 3.
       - The default password can be exposed to a hacking thread so it is recommended to change the password after installing the product.
       Note that the security and other related issues caused by the unchanged password shall be responsible for the user.
       - Password should be longer than 8 characters, no more than 16 characters.

   - Password should be longer than 8 characters, no more than 16 characters.
EVENT SETUP

FTP / E-mail
You can configure the FTP/E-mail server settings so that you can transfer the images taken with camera to your PC if an event occurs.

1. From the Setup menu, select the <Event ( )> tab.
2. Click <FTP / E-mail>.
3. Select <FTP configuration> or <E-mail configuration> and enter / select a desired value.
   - FTP configuration
     - Server address : Enter the IP address of the FTP server that you transfer the alarm or event images to.
     - ID : Enter the user ID with which you will log in to the FTP server.
     - Password : Enter the user account password for logging into the FTP server.
     - Upload directory : Specify the FTP path where you will transfer the alarm or event images.
     - Port : The default port of the FTP server is 21; however, you can use a different port number according to the FTP server settings.
     - Passive mode : Select <On> if you need to connect in passive mode due to the firewall or the FTP server settings.
   - E-mail configuration
     - Server address : Enter the SMTP address of the email server that you transfer the alarm or event images to.
     - Use authentication : Select whether to use authorization.
     - Use TLS : Specify the use of TLS.
     - ID : Enter the user ID for logging into the email server.
     - Password : Enter the user account password for logging into the email server.
     - Port : The default port of the email server is 25; however, you can use a different port number according to the email server settings.
     - Recipient : Enter the address of the email recipient.
     - Sender : Enter the address of the email sender. If the sender address is incorrect, the email from the sender may be classified as SPAM by the email server and thus may not be sent.
     - Subject : Enter a subject for your email.
     - Body : Provide the text for the massage. Attach the alarm or event images to the email that you are preparing.
4. When done, click [Apply ( )].
Storage
You can activate recording on your device, set the recording conditions, check the saved data capacity and format the device itself.

1. From the Setup menu, select the <Event (५४)> tab.
2. Click <Storage>.
3. Select a device to save data in.

- If your device is properly recording data, it will display "Recording".
- If you see an "Error" message, check the following:
  - Check the storage to see if it is connected to the device.
  - Check the files in the storage to see if they are damaged.
  - Check the storage to see if they are physically damaged.
- If the "Error" message does not disappear after following the instructions, format the Micro SD card.
  After formatting, if the error message still remains, replace the Micro SD card.
- If you remove the Micro SD card without changing a button to 'off' position in settings or if you connect a camera to an unstable power source, the Micro SD card may be damaged.

- After operation in record mode, you are limited to 2 simultaneously accessible profiles, and to 3 connected users. However, existing users will be sustained.

To make recording on the Micro SD memory

1. Set the SD card unit to <On>.
2. Click the [Apply (५४)] button.
3. Check the memory card's <Free size> and <Total size>.
   You can format the Micro SD card by clicking the <Format> button.
   - Some frames may be skipped if the Micro SD memory card operates at the lower speed than recommended.
   For more details, refer to "Recommended Micro SD/SDHC/SDXC Memory Card Specifications". (Page 6)
   - For a Micro SD memory card with a large capacity, the formatting will be slowed down accordingly.
   - The data traffic will increase when the camera is set to higher resolution, higher bit rate, and/or higher framerate.
   - If there is too much data traffic, some frame may be skipped although it is stored in a full frame.
   - When a frame skip occurs, images are saved at the rate of min. one image per sec.
4. Specify the storage action.
   - Record profile : The name of profile to be recorded is displayed.
   - Normal : Make recording at a certain frame rate.
   - Event : Set the recording type for a certain event that occurs.

- Pre event duration : Specify the time point before the occurrence of the alarm; starting from the time point, the images will be transferred. You can specify up to 5 seconds before the occurrence of the alarm.
- Post event duration : Specify the time point after the occurrence of the alarm; to the specified time point, the images will be transferred. You can specify up to 120 seconds after the occurrence of the alarm.
- Record file type : It specifies the file format of the recorded images.
  - STW : It is Hanwha Techwin's unique file format.
  - AVI : It is the conventional avi format.
- If the Record file type is changed, the existing data is formatted.
- Overwrite : If the Micro SD memory is full, this will delete old data and store new data in replacement.
- Auto delete : Data for a certain period is deleted, while other data is not deleted.
  This can be set within the range of one day to 180 days.
- If the storage period is expired, data is automatically deleted and new data will be recorded. Once deleted, it cannot be recovered.
5. Set <SD File System>.
   - Type : Camera supports VFAT and ext4 as an SD card file system, which can be configured by the user. (However, in case of ext4 file system, an additional application is required to recognize the Windows operating system)
   - If the settings are changed, the existing data will be formatted.
   - It may take up to 10 minutes to format an SD card in the ext4 file system.
6. Specify the <Normal record setup>.
   - Always : Always save recorded video in the Micro SD memory card.
     - If set to Always, the activation time cannot be changed.
   - Only scheduled time : Records only on the specified time of the specified day of week.
   - [Clear (५४)] : Reset all settings.
7. When done, click [Apply (५४)].
If you want to record in your NAS

1. Set the saving operation and basic recording.
   - Auto deletion is supported only if your NAS meets the recommended specifications.

2. Enter the information registered in your NAS.
   - IP address : Unique IP address assigned to the NAS.
   - ID : An ID registered in the NAS.
   - Password : Password registered in the NAS.
   - Default folder : Designate the NAS user folder to save data in.

3. Click the [Test] button to see if you can successfully connect to the NAS.
   - If the success message is displayed, it means that you can successfully save data in the NAS.
   - If the fail message is displayed, check the following:
     - Confirm that the IP address of the NAS is valid.
     - Confirm that the ID/password of the NAS is valid.
     - Confirm that you can access the folder designated as the default folder using the ID of the NAS.
     - Confirm that the NAS SMB/CIFS items are unchecked.
     - Confirm that the NAS IP address and the camera IP address are in the same format.
     - Check whether you tried to access as another user without formatting the default folder saved or used.
     - Confirm that you used recommended NAS equipment.

4. After the settings are completed, set the NAS unit to <On>.

5. Click the [Apply] button.

6. Log in to the NAS and check the <Free size> and <Total size>.
   You can format the default folder specified in the NAS connection setting by clicking the <Format> button.
   - Since data may not be saved after a temporary network interruption when using NAS, it is recommended that you use SD at the same time to prevent loss of recorded images.
   - If the setting allows a Micro SD memory card and the NAS to be simultaneously connected for use, the higher priority for recording goes to the NAS.
   - If you activate Overwrite to the NAS by setting it to <Off> and the available capacity is below 1%, it will be saved in the Micro SD card.
   - If you are saving data in the NAS, you might be unable to save it when you insert a Micro SD memory card used by another camera.
   - NAS recommended specs : Refer to “NAS recommended specs” (Page 6)
   - If you change the NAS saving while saving data in the NAS, it will not be reflected in the system immediately.
   - If you remove NAS equipment on your own while saving data, or if the network is disconnected, NAS saving operation will be terminated abnormally.
   - NAS saving allows only one camera to a folder. Logging in with another camera is not allowed, and the images will not be saved.

The following is a description of how to save data using the NAS according to the Synology NAS method, which is one of the recommended products.

1. Access the Synology NAS as an admin.
   In this example, the NAS IP Address is set to [192.168.20.253].

2. If you access it as an admin, the following screen will be displayed. Click the [Control Panel].

3. Click the <Shared Folder> in the file sharing and privilege menu.
4. Click the [Create] button.
5. After entering the shared folder name(ID), click the [OK] button to create a shared folder. In this example, the shared folder name is [testDirectory].

6. In Windows, for NAS access, set the privilege for the shared folder as follows. Check the admin's [Read/Write].

7. Click on the <User> in the file sharing and privilege menu.

8. After clicking the [Create] button, enter name(ID) and password. In this example, name(ID) is set to [testID] and password is also set to [testID].

   According to the NAS recommendations, when you use Netgear’s NAS equipment, do not allocate the capacity for use.

9. In Windows, set the privilege for NAS access. For the shared folder created in step 4 called “testDirectory” check [Read/Write].

10. Basic setting in the NAS is completed. Connect your camera to the actual NAS. As shown below, enter the NAS connection setting items.

11. After entering item 10, check <On>.

12. Click the [Apply (F4)] button. Finish saving by using the NAS.

**Alarm output**

1. From the Setup menu, select the <Event ( ) > tab.
2. Click <Alarm output>.
3. Configure the camera alarm output settings.
   - If you change the alarm output type, the alarm out button on the monitoring page and alarm output type displayed on Event Setup page will be changed accordingly.
     
     **Type**
     - Normal open : Considers “Open circuit” status of the sensor or alarm input device as normal, and triggers alarm event if becomes “Closed circuit” status.
     - Normal close : Considers “Closed circuit” status of the sensor or alarm input device as normal, and triggers alarm event if becomes “Open circuit” status.
   - Mode : Sets the alarm output method.
     - There is difference between operations when clicked alarm output button while disabled.
     - Pulse : It is activated during the time period specified by the duration (switching interval) and then becomes inactive automatically.
     - Active/Inactive : It maintains as activated until the user clicks the button again to make it inactive.
   - Duration : Set the alarm duration that maintains activated if the mode is set to pulse, from 1 to 15 seconds.
4. When done, click [Apply (F4)].
**Alarm input**

You can set the alarm input type, activation time, and operation mode.

1. From the Setup menu, select the <Event ( )> tab.
2. Click <Alarm input>.
3. Set whether or not to <Enable>.
4. Select the type.
   - Normal open : It is normally open, but if it is closed, an alarm will be triggered.
   - Normal close : It is normally closed, but if it is open, an alarm will be triggered.
5. Specify the <Activation time>.
   - Always : Always check if an alarm occurs. It activates in operated mode when the alarm occurs.
     - If set to <Always>, the activation time cannot be changed.
   - Only scheduled time : Check if an alarm occurs at a specified day of the week for a specified time period. It activates in operated mode when the alarm occurs.
     - [Clear ( )] : Reset all settings.
   - Minute : Click an area in Activation Time and set the time by minutes.
   - Hour : Drag your mouse at Activation Time and set the time by hours.
6. Specify an operation that will perform if an alarm occurs.
   - FTP : Specify the use of FTP transfer in the alarm input setup.
     - Refer to "FTP / E-mail" for more details. (page 52)
   - E-mail : Specify the use of email transfer in the alarm input setup.
     - Refer to "FTP / E-mail" for more details. (page 52)
   - Record : You can set up the alarm to record to a Micro SD card or an NAS when operating.
     - Set <Device> to <On> in <Storage>. (page 53)
   - Alarm output1 : Select whether to set the alarm output if an alarm is incoming, and specify the alarm output time.
7. When done, click [Apply ( )].

---

**Time schedule**

You can configure settings to transmit images at regular intervals at a scheduled operation time regardless of the occurrence of an event.

1. From the Setup menu, select the <Event ( )> tab.
2. Click <Time schedule>.
3. Set whether or not to <Enable>.
4. Specify the <Transfer interval>.
5. Specify the <Activation time>.
   - Always : Always activates in operated mode at the set interval.
   - Only scheduled time : Periodically activates in operated mode at a specified time and date.
   - The transfer interval setting value must be smaller than the preset activation interval to succeed in image transmission.
6. Specify the activation conditions.
   - FTP : Specify the use of the FTP transfer if an event occurs.
     - Refer to "FTP / E-mail" for more details. (page 52)
   - E-mail : Specify the use of email transfer in the alarm input setup.
     - Refer to "FTP / E-mail" for more details. (page 52)
   - Record : You can set up the alarm to record to a Micro SD card or an NAS when operating.
     - Set <Device> to <On> in <Storage>. (page 53)
   - Alarm output1 : Select whether to set the alarm output if an alarm is incoming, and specify the alarm output time.
7. When done, click [Apply ( )].
Tampering detection
You can set to detect tampering attempts and trigger events, such as sudden change of camera’s framing direction, blocked lens and other overall change of scenes from the video.
1. From the Setup menu, select the <Event ( )> tab.
2. Click <Tampering detection>.
3. Set whether or not to <Enable>.
4. Set the tampering detection sensitivity. The higher the sensitivity, detects the minutest tampering attempts.
5. Specify the activation time and activation condition.
   - For more information about <Activation time> and <Action>, refer to ‘Alarm input’. (page 56)
6. When done, click [Apply ( )].

Defocus detection
You can configure settings to generate an alarm signal when a defocus of the camera lens is detected.
1. From the Setup menu, select the <Event ( )> tab.
2. Click <Defocus detection>.
3. Set whether or not to <Enable>.
4. Set the sensitivity.
   - The higher the sensitivity value is, the finer defocus can be detected.
5. Specify the activation time and activation condition.
   - For more information about <Activation time> and <Action>, refer to ‘Alarm input’. (page 56)
6. When done, click [Apply ( )].

- It may take a certain length of time (up to 5 seconds) to detect the defocus after a defocus situation occurs.
- In the following cases, the defocus detection performance may be impaired or a malfunction may occur.
  - Monotonous monitoring environment, night or low illumination environment
  - Sudden changes in the illumination (e.g. indoor light shutting off)
  - Lens blocked by a large object that covers almost all of the screen
  - Changes the focus object by changing the camera position.

Motion detection
You can configure settings to generate an event signal when a motion detection event is generated.
1. From the Setup menu, select the <Event ( )> tab.
2. Click <Motion detection>.
3. Enable the motion detection mode.
4. Set <Sensitivity>, <Size> and <Area>.
5. Specify the activation time and activation condition.
   - For more information about <Activation time> and <Action>, refer to ‘Alarm input’. (page 56)
6. When done, click [Apply ( )].

- The default tampering detection function may not work properly in the following cases:
  - Under circumstances of simple background or low illumination and night time may lower the detection sensitivity.
  - A severe shaking of the camera or a drastic change to the illumination can be considered a tampering by mistake.
  - Detection of the tampering may take some time (maximum 5 seconds) right after the tampering was made.
  - Once a tampering is detected, the camera will resume a normal operating after a certain stability time (approx. 5 seconds) during which no detection will be performed.
- If false alarms are generated frequently, decrease the sensitivity gradually to minimize false alarms.
  - If you choose a lower sensitivity, only a sudden tempering is detected.
- If you use a higher sensitivity, alarms may be generated even from very small changes, but false detection in response to changes in an object or brightness may occur.
Before using, set the minimum and maximum motion sizes to suit desired motion range to be detected.
Detected size of an object may have difference with the actual size according to its shape.
Up to 16 objects from the top side of the screen can be displayed.
In the following cases, motion detection performance may be impaired or a malfunction may occur.
- The object color or brightness is similar to the background.
- Small activities around the border area of the camera's field of view.
- Multiple movements continue occurring at random due to a scene change, rapid lighting changes or other reasons.
- A fixed object continues moving in the same position.
- Motions of less position changing such as approaching to the camera or fading away from the camera.
- Moving object approaches to the camera too close
- An object hides other objects behind.
- Two or more objects overlap or one object divides in multiple portions.
- Too fast object (for a proper detection, one object should be found overlapping between contiguous frames).
- Reflection / blur / shadow due to a strong light such as direct sunlight, illumination, or headlamp.
- In severe snow, rain, wind or in dawn / dusk.

To use Motion detection
It detects a motion that meets all conditions specified by sensitivity, size and area.

1. Select a motion detection mode.
2. Select <Sensitivity> tab to set the sensitivity level. You can set the sensor's sensitivity to detect a motion out of the background from the monitoring video.
   In a situation that definitely distinguishes objects out of backgrounds, set this to a low sensitivity level. For opposite case that is hard to distinguish objects like low illuminated situation, set this to a high level.
3. Select <Size> tab.
   You can limit the minimum/maximum size of motion to be detected.
   • Minimum size (pixel) : To set the minimum size of detected motions, select <Minimum size (pixel)> and then point and drag to the desired size on the screen using the mouse.
   • Maximum size (pixel) : To set the maximum size of detected motions, select <Maximum size (pixel)> and then point and drag to the desired size on the screen with your mouse.
4. Select <Area> tab.
   You can specify an area on the screen to include or exclude the area to/from detection.
   You can specify up to 4 areas.
   - Detection area : Sets the entire screen as excluded from detection, and adds specified area as motion detection area. Select 4 vertices in the image with your mouse to specify the detection area.
   - Non detection area : Sets the entire screen as motion detection area, and excludes specified area as not to be detected. Select 4 vertices in the image with your mouse to specify the non-detection area.
5. To delete a designated area, right click the mouse on the video and click the [Delete] button displayed on the popup window.
6. When done, click [Apply].

Network disconnection
When the network is physically disconnected, it is considered as an event to be saved.
1. From the Setup menu, select the <Event> tab.
2. Click <Network disconnection>.
3. Set whether or not to <Enable>.
4. Specify the activation time and activation condition.
   - For more information about <Activation time> and <Action>, refer to "Alarm input". (page 56)
5. When done, click [Apply].
SYSTEM SETUP

Product information
1. From the Setup menu, select the <System> tab.
2. Click <Product information>.
3. Check the camera information, or provide details according to your network environment.
   - Model : Model name of the product.
   - Serial number : Product serial number.
   - Device name : Provide a device name that will be displayed on the Live screen.
   - Location : Specify the location where the camera is installed.
   - Description : Provide detailed information about the camera location.
   - Memo : Provide an explanation about the camera for better understanding.
   - Language : Select a preferred language for the Web Viewer OSD.
     - The default language is set to <English>.
4. When done, click [Apply].

Upgrade / Reboot
1. From the Setup menu, select the <System> tab.
2. Click <Upgrade / Reboot>.
3. Select a desired item and set it appropriately.
   - Upgrade : Performs upgrading the system.
   - Factory default : Initializes all setting information including the camera settings to the factory reset state. (however, logs are not initialized)
     - Exclude Setting : If you select the <Network> check box, network settings are not initialized.
     - The IP addressing system will be defaulted to DHCP if you reset the camera. If no DHCP server is found, the previous settings will be restored automatically.
   - Configuration backup & Restore : Backs up the current system settings before performing the restoration process. The system is automatically restarted after backup or restoration.
   - Restart : Restarts the system.

To perform the upgrade
1. Click [Browse] and specify a file to upgrade.
2. Click [Upgrade].
3. An “Upgrade” progress bar is prompted to show the upgrading status.
4. Once completed upgrading, the browser exits and the camera restarts.
   - It may take a max of 10 minutes for the upgrade process.
   - If you forcibly terminate the upgrade process, upgrade will not be completed properly.
   - During restarting the system, accessing with web viewer will not be made.
   - You can download the latest version from the Hanwha Techwin web site.

To back up the current settings
1. Click [Backup].
2. A file in a “.bin” file format is saved in “Library” -> “Document” -> “Downloads”.

To restore the backup settings
1. To restore the backup settings, click [Restore].
2. Select a desired backup file.
   - If you perform the backup or restoration, the web browser will be closed and the camera will reboot.
   - If you try to recover the config file backed up in other model, some functions may malfunction and you need to change the setting manually.
Log
You can check the system log or event log.

1. From the Setup menu, select the <System (>) tab.
2. Click <Log>.
3. Select a log type.
   - Access Log : You can check the log information that contains the user’s access and the access time.
   - System log : You can check the system logs where any system changes are recorded including the time information.
   - Event log : You can check the event logs including the time information.
4. From the right log list, select an item to search for.
   - If you select <All> in the top left dropdown list, all logs for the applicable log type will be displayed.
5. If one page can not display all the logs available, use the bottom buttons to move to the previous, next, or the last item.
6. Click on the <Backup> button to save all the log data for the currently selected mode in the "time stamp value create by camera in modelname-mode-camera.txt file" in the download folder for the browser.

   - Each page displays 15 logs with the latest one displayed at the top.
   - Each log contains up to 1,000 records and after 1,000 records are saved, the oldest log is deleted when a new record is generated.

Status
You can check the profile information.

1. From the Setup menu, select the <System (>) tab.
2. Click <Status>.
3. The profile information screen is displayed.
   - Profile access : Show the information of the newly added profile.
     - Profile : Show the name of the profile accessed by the user.
     - Bitrate(kbps) : Show the current bit rate.
     - Network connection status : It shows whether the network is working fine.
     - IP : Show the IP address of the current user.
   - Concurrent users count : Show the number of concurrent users who access the profile.
   - Current users : Shows information on users accessing web viewer and displaying monitoring video.
     - Profile : Show the name of the profile accessed by the user.
     - Bitrate(kbps) : Show the current bit rate.
     - Network connection status : It shows whether the network is working fine.
     - IP : Show the IP address of the current user.

   To check information on the profile currently used, click [Update] again to refresh it. It takes a certain time for any changes to be applied.
   - You can check the profile access status by clicking the [Menu ( )] - [Status ( )] tab.

<th>Problem</th>
<th>Solution</th>
</tr>
</thead>
</table>
| No video is displayed when accessing the plug-in free webviewer on Safari via HTTPS. | - On the authentication popup window prompted when initially accessing https, click "View Authentication Certificate" and select the "Always trust when connecting to the designated webviewer IP" check box.  
- If the webviewer continues failing to display a video after you select "Next" on the message window below, press the command key + Q to exit the Safari browser, access again and follow the procedures stated above. |
| I can’t access the camera from a web browser. | - Check to make sure that the camera’s Network settings are appropriate.  
- Check to make sure that all network cables have been connected properly.  
- If connected using DHCP, verify that the camera is able to acquire dynamic IP addresses without any problem.  
- If the camera is connected to a Broadband Router, verify that port forwarding is properly configured. |
| Viewer got disconnected during monitoring. | - Connected Viewers become disconnected upon any change to camera or network configurations.  
- Check all network connections.  
- If the camera is connected over an PPPe network, it’s possible for Viewer to disconnect under poor network conditions. |
| No video is displayed when I newly access the webviewer or connect streaming to the client. | - The maximum number of profiles available is 3. The connection may be lost if you use 4 or more of profiles.  
Example) If you access MJPEG, H264 and H265 and then access with a different profile, the connection will be lost. |
| The camera connected to the network is not detected in the IP installer program. | - Turn off the firewall settings on your PC and then search the camera again. |
| Images overlap. | - Check whether two or more cameras are set to a single multicast address instead of different addresses. If a single address is used for multiple cameras, the images may overlap. |
| No image appears. | - If the transmission method is set to multicast, check whether there is a router that supports multicast in the LAN the camera is connected to. |

## Problem Solution

| File is not transferred to the email even if a motion detection event is generated with <Motion detection> set to <On> in the <Event> page. | - Verify the settings in the following sequence:  
A. Check <Data & Time> settings.  
B. The <Motion detection> should be set to <Enable>.  
C. Check if the <E-mail> option of <Event setup> menu is checked to use. |
| Cannot record into the Micro SD memory card. | - Check if the memory card is defective. |
| Micro SD memory card is inserted but the camera does not operate properly. | - Check if the memory card is inserted in the proper direction. Operation of memory card that is formatted by other devices is not guaranteed with this camera unit.  
- Format the memory card again in <Setup> -> <Event> -> <Storage> menu. |
| Cannot record in the NAS. | - Confirm that the information registered in the NAS is correct. |
| It reports that NAS setting has failed. | - Confirm that the IP address of the NAS is valid.  
- Confirm that the ID/password of the NAS is valid.  
- Confirm that you can access the folder designated as the default folder using the ID of the NAS.  
- Confirm that the NAS SMB/CIFS items are unchecked.  
- Confirm that the NAS IP address and the camera IP address are in the same format.  
Example) The NAS & camera subnet mask initial value is 255.255.255.0. If the IP address is 192.168.20.32 then the NAS IP address should be in the range of 192.168.20.1 ~ 192.168.20.255.  
- Check whether you tried to access as another user without formatting the default folder saved or used.  
- Confirm that you used recommended NAS equipment. |
OPEN SOURCE ANNOUNCEMENT

GPL/LGPL software license

The software included in this product contains copyrighted software that is licensed under the GPL/LGPL. You may obtain the complete Corresponding Source code from us for a period of three years after our last shipment of this product by sending email to help.cctv@hanwha.com.

If you want to obtain the complete Corresponding Source code in the physical medium such as CD-ROM, the cost of physically performing source distribution might be charged.

Gnu GeneraL puBLic LicenSe

Version 2, June 1991
Copyright (C) 1989, 1991 Free Software Foundation, Inc. 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble
The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software — to make sure the software is free for all users.

This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Lesser General Public License instead.) You can apply it to your programs, too. When we speak of free software, we are referring to freedom, not price. So our phrase “free software” refers to “freedom to share and change the source code”, as opposed to “priceless” or “free as in speech,” as opposed to “free as in beer.”

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

Version 2, June 1991 (Copyright (C) 1989, 1991 Free Software Foundation, Inc. 51 Franklin St.

This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License.

The “Program”, below, refers to any such program or work, and a “work based on the Program” means either the Program or any derivative work under copyright law : that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language.

(Hereinafter, translation is included without limitation in the term “modification”.) Each licensee is addressed as “you”.

Activities other than copying, distribution and modification are not covered by this License ; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

Copyright law : that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language.

In any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty ; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions :

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program (or any part thereof), to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run,you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License.

(Examination of the Program itself is not considered interactive use.)

The term “Program” does not include anything that is normally distributed (in either source or binary form) with the major components of a work.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you ; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program. In addition, mere aggregation of another work not based on the Program with the Program is not taking distribution of the Program for the work as a whole at no charge to all third parties under the terms of this License.

You may copy and distribute the Program (or a work based on it, under Section 2), object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following :

a) Accompany it with a complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange ; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange ; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only if you receive the object code with subsections above. The source code must be the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. As a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major

Underlying license:

GPL 2.0

http://www.roaringpenguin.com/pppoe/

GPL 3.0

http://www.webdav.org/neon/
component (complier, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place as counting as distribution of the source code, even through third parties are not compiled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License.

However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivatives without permission from other holders who have received copies under this License.

These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing and modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipients also must be able to copy the source code from the place you redistribute the object code by an operation understood to copy and/or modify the Program or work so as to be given/used with the object code. You must ensure that they receive a copy of this License along with the object code, and you must copy and distribute the Program according to this License.

7. You may not copy, modify, sublicense, or distribute the Program for any purpose without giving source code if: you are distributing an object code form of the Program without the source code, and if you have or can get the source code for the same version; or if you are distributing an object code form of the Program with the source code for the same version; or if you are modifying or distributing the Program (or any work based on the Program), and with it receive a copy of the Corresponding Source for the same version.

8. You may not copy, modify, sublicense, or distribute the Program if you do not receive along with it, or later receive, a complete Corresponding Source Code License.

9. You must cause the files modified by you to carry prominent notices stating that you changed the files and the date of any change.

10. You must retain, in the source code of any work based on the Program, prominent notices stating the version of the GNU General Public License under which the work is licensed and an indication of how to obtain a copy of that License.

11. You must retain, in the end-user documentation of any work based on the Program, the notice described in paragraph 4 above.

It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" statement and a notice that the data is Proprietary.

You should also get your employer if you work as a programmer, your school, if any, to sign a "copyright disclaimer" for the program, if necessary.

You should give a copy of the Complete Corresponding Source License for the Corresponding Source you distribute and any later version you modify or distribute.

You may not copy, modify, sublicense, or distribute the Program except in compliance with this License. For违反 this License, see section TERMINALS AND CONDITIONS.

This License applies to any program or other work which has been distributed under the terms of version 3 of the GNU General Public License.

Source code

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "standard interface" means an interface that is official standard defined by an authoritative party, and, in the case of interfaces specified for a particular programming language, that is one widely used among developers working in that language.

The "System Libraries" of an executable work includes anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, either bound into the executable, or supplied as a separate usable library; and (b) the originator of the work requires to be linked against a version of the library identified by version number on delivery of the work.

You may not copy, modify, sublicense, or distribute the Program for any purpose without giving source code if: you are distributing an object code form of the Program without the source code, and if you have or can get the source code for the same version; or if you are distributing an object code form of the Program with the source code for the same version; or if you are modifying or distributing the Program (or any work based on the Program), and with it receive a copy of the Corresponding Source for the same version.

You must cause the files modified by you to carry prominent notices stating that you changed the files and the date of any change.

You must retain, in the end-user documentation of any work based on the Program, the notice described in paragraph 4 above.

You should give a copy of the Complete Corresponding Source License for the Corresponding Source you distribute and any later version you modify or distribute.

This License applies to any program or other work which has been distributed under the terms of version 3 of the GNU General Public License.
2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output of the original work is itself covered by this License. This License explicitly affirms your right to distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice, that states that you accept responsibility for the modifications you make, and that states that you accept liability for all violations of this License for those modifications. You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program. You may charge any price for the copy of the covered work, and for conveying copies, including for sale or for adoption to others, under these terms. You may convey the covered work for any purpose and in any way, provided only that you do not charge a fee for the copy of the covered work, and that you adhere to the other terms of this License. Providing a cover of the covered work for no charge is a conveyance of the work for no fee, within the meaning of this section.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to the extent necessary, to others who have received them from you, under the terms of this License, provided you comply with the provisions of section 4. For an aggregate covered work made up of a covered work and other works, each with their own Copyright and License Statements, the著作权 of each part of the aggregate work is the Copyright of each contributing part under the terms of this License, regardless of the Copyright of the other parts of the aggregate work. You may convey an aggregate only if you do so in or with its Accomplice, and under terms which do not forbid or restrict any edge of the aggregate from being conformed as a covered work.

You may convey an aggregate only if you do so in or with its Accomplice, and under terms which do not forbid or restrict any edge of the aggregate from being conformed as a covered work.

3. Protecting Users' Legal Rights from Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WPO copyright treaty implemented by the law of the member country in which the covered work is first published. The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified by the original copyright holder or by persons included in section 4(a) above, for the work as modified if it includes the same functions as the original work, or for the work as modified in any way that does not materially and adversely affect the operation of the network or violate the rules and protocols for communication across the network.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice, that states that you accept responsibility for the modifications you make, and that states that you accept liability for all violations of this License for those modifications. You may convey the covered work, or parts thereof, without modification under the terms of section 4, provided that you include this License and any other notices that the covered work required by section 4, and that you do not modify the License.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

a) The work must carry prominent notices stating that you modified it, and giving a relevant date.

b) The work must carry prominent notices stating that it is released under this License and any other notices that the work required by section 4, and that you do not modify the License.

c) The work must retain intangible notices, for example, disclaimers, that accompany the source; but these may be claimed by disclaiming the notice so long as this does not alter the meaning of the notice and its purpose.

d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display these notices, it is not necessary to include them.

6. Conveying Non-Source Form.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also meet all of these conditions:

a) Convey the object code in, or embed it in, a product that does not otherwise copy any covered work.

b) Convey the object code in, or embed it in, a product that is used for software interchange, provided that it contains a的习惯 component, and all and all of the following disclaimers.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be treated as distinct for the purpose of applying the conditions of the additional permissions. Each additional permission set its scope to a particular field of free use. This License and any such additional permissions only apply to the work as given above, not to ancillary propagation of a covered work.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt to terminate your rights under this License (including an attempt to make the work public by post or other means) that disobeys the terms of this License shall be void.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. Nothing otherwise stated in this License grants acceptance. You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. Nothing otherwise stated in this License grants acceptance. You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. Nothing otherwise stated in this License grants acceptance.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. Any other party who is informed as to the nature of the License, and provided with a copy of it, is licensed automatically to do anything permitted to you by this License. That license will not terminate so long as this license remains in force.

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed includes the contributors' "contribution" or "contributor version". A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that the contributor acquired, nor claims subject to the following disclaimer. A "contributor version" means the Program as you receive it, plus any additional work made by you or someone working for you. If you modify a work under this license, or the product incorporates a work, in a product you distribute, other than an aggregate, you may propagate or propagate the work without granting access to the Copyright of the covered work, and for conveying copies, including for sale or adoption to others, under these terms. You may convey the covered work for any purpose and in any way, provided only that you do not charge a fee for the copy of the covered work, and that you adhere to the other terms of this License. Providing a cover of the covered work for no charge is a conveyance of the work for no fee, within the meaning of this section.

With respect to a product, an "entire aggregate" includes every product that incorporates the covered work, and all related aggregate products, if any. An "entire aggregate" also includes the copyrighted work, and all related aggregate products, if any.

The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified by the original copyright holder or by persons included in section 4(a) above, for the work as modified if it includes the same functions as the original work, or for the work as modified in any way that does not materially and adversely affect the operation of the network or violate the rules and protocols for communication across the network.

Copyrights and trademark laws protect the dollar value of an aggregate having substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use for that particular aggregate, and unless the aggregate has been incorporated into a product that is substantially similar in kind to the product containing it. Hot squishing to perform any such uses in any aggregate having substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use for that particular aggregate, and unless the aggregate has been incorporated into a product that is substantially similar in kind to the product containing it.

A "contribution" is any express agreement or commitment, however documented, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party. If you convey a covered work, knowingly relying on a patent license, and the governing version of this License requires propagation of source code in order to comply with the promise in the license, the source code must be made available to all recipients.

This License explicitly affirming your right to distribute verbatim copies of any copyrighted material outside this License, without the obligation to comply with sections 4 and 5, subject to the following constraints. Under section 4(a), you must provide a modifiable copy of the Corresponding Source in all packages of the work, even those distributed with source. You must make reasonable efforts to ensure that the Corresponding Source is modified in all instances so that it is consistent with the modified object code, in the light of their purpose and nature, and to publish your unanimous directions to do so, if and only if the Corresponding Source would otherwise be In the public domain by subsection 6b.

If you convey an aggregate work as a network service, you agree to make the Corresponding Source available to the public in source code form, and allow all recipients a copy of it along with the Program. You may charge any reasonable fees for copying or access to the object code, provided that this does not prevent anyone from exercising this License. You may not charge a fee for the Corresponding Source, and you may not propagate or propagate the Corresponding Source for any reason other than to exercise this License. You may not propagate or propagate the Corresponding Source for any reason other than to exercise this License. You may not propagate or propagate the Corresponding Source for any reason other than to exercise this License.
If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply
(b) primary for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 29 March 2007. Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not exonerate you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligation then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying of this Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

14. Revisions of This License.
The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

15. Disclaimer of Warranty.
THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT OWNER, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN NO EVENT SHALL THE COPYRIGHT OWNER OR CONTRIBUTORS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

16. Limitation of Liability.
IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

17. Interpretation of Sections 15 and 16.
If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

OpenSSL Combined License

The OpenSSL toolkit stays under a dual license, i.e. both the conditions of the OpenSSL License and the original SSLeay license apply to the toolkit. See below for the actual license text. Actually both licenses are BSD style Open Source licenses. In case of any license issues related to OpenSSL, please contact openssl-core@openssl.org.

Component Name | License | URL
---|---|---
openssl-1.0.2e | OpenSSL | http://www.openssl.org/license.html

Copyright (c) 1998-2011 The OpenSSL Project. All rights reserved.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:
1. Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.
2. Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.

Mozilla Public License

Since we, as an open source project, used the Mozilla Firefox component without modifying the source code according to the Mozilla Public License 1.1, we are not obliged to provide the source code of the corresponding component.

• Version: 1.1

1. Definitions.

1.0.1. "Commercial Use" means distribution or otherwise making the Covered Code available to a third party.

1.1. "Contributor" means each entity that creates or contributes to the creation of Modifications.

1.2. "Contributor Version" means the combination of the Original Code, prior Modifications used by a Contributor, and the Modifications made by that particular Contributor.

1.3. "Covered Code" means the Original Code or Modifications or the combination of the Original Code and Modifications, in each case including portions thereof.

1.4. "Electronic Distribution Mechanism" means a mechanism generally accepted in the software development community for the electronic transfer of data.

1.6. "Initial Developer" means the individual or entity identified as the Initial Developer in the Source Code notice required by Exhibit A.

1.7. "Large Work" means a work which combines Covered Code or portions thereof with code not governed by the terms of this License.

1.8. "License" means this document.

1.8.1. "Licensable" means having the right to grant, to the maximum extent possible, whether at the time of the initial grant or subsequently acquired, any and all of the rights conveyed here.

1.9. "Modifications" means any addition to or deletion from the substance or structure of either the Original Code or any previous Modifications. When Covered Code is released as a series of files, a Modification is:

A. Any addition to or deletion from the contents of a file containing Original Code or previous Modifications.

B. Any file that contains any part of the Original Code or previous Modifications.

1.10. "Original Code" means Source Code of computer software code which is described in the Source Code notice required by Exhibit A as Original Code, and which, at the time of its release under this License is not already Covered Code governed by this License.

1.10.1. "Patent Claims" means any patent claim(s), now owned or hereafter acquired, including without limitation, method, process, and apparatus claims, in any patent Licensable by grantor.
1.1.1. “Source Code” means the preferred form of the Covered Code for making modifications to it, including all modules it contains, plus any associated interface definition files, scripts used to control compilation and installation of an Executable, or source code differential comparisons against either the Original Code or another well-known, available Covered Code of the contributor’s choice. The Source Code can be in a compressed or archival form, provided the appropriate decompression or de-archiving software is widely available free of charge.

1.1.2. “You” or “Your(s)” means an individual or a legal entity exercising rights under, and fulfilling all of the terms of, this License, a License for this Original Code, or a Contributor Version under which such terms are fulfilled. "You" includes every entity that You control or that controls You. "You" includes the original author of the Covered Code as well as every Contributor. "You" means an entity exercising rights under, and fulfilling all of the terms of this License, whether or not You are a Contributor. For the purposes of this definition, "control" means (a) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (b) ownership of more than fifty percent (50%) of the outstanding shares or beneficial ownership of such entity.

2. Source Code License

2.1. The Initial Developer Grant. The Initial Developer hereby grants You a world-wide, royalty-free, non-exclusive license, subject to third party intellectual property claims:

(a) under intellectual property rights (other than patent or trademark) Licensable by the Initial Developer to use, reproduce, modify, display, perform, sublicense and distribute the Original Code, with or without Modifications, and/or as part of a Larger Work;

(b) under Patents Claims infringed by the making, using or selling of Original Code, to make, have made, use, practice, sell, or offer for sale, and/or otherwise dispose of the Original Code (or portions thereof).

The licenses granted in Section 2.1(a) and (b) are effective on the date Initial Developer first distributes Original Code under the terms of this License.

2.2. Contributor Grant. Subject to third party intellectual property claims, each Contributor hereby grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or trademark) Licensable by the Contributor to use, reproduce, modify, display, perform, sublicense and distribute the Covered Code, with or without Modifications, and/or as part of a Larger Work;

(b) under Patents Claims infringed by the making, using, or selling of Modifications made by that Contributor either alone or in combination with its Contributor Version (or portions of such combination), to make, have made, use, offer to sell, sell, or offer for sale, and/or otherwise dispose of the Modifications (or portions thereof); and

(c) the combination of the Original Code and other Covered Code distributed by You under the terms of this License.

The licenses granted in Sections 2.1(a) and (b) are effective on the date Contributor first distributes Covered Code under the terms of this License.

2.3. Availability of Source Code. Any Modification which You create or to which You contribute must be made available in Source Code form under the terms of this License, including without limitation Section 3.2.

2.4. Distribution Obligations. You must make available at no charge, a copy of the notices described in Section 3.4 to each recipient of the Covered Code as distributed by You. You must also include a copy of this License and the following notice in the Source Code:

"This License applies to code to which the Initial Developer has attached the notice in Exhibit A and to related Covered Code. If you distribute Covered Code as part of a Larger Work, you must make the Source Code version of the Covered Code available in accordance with Section 3.2. Provided that You comply with the conditions set forth in this License, You may elect to distribute the Executable version of the Covered Code that You create under any such terms You choose, or distribute the Executable version of the Covered Code that You create under the terms of this License, without charge to the End User. You may sublicense the rights granted under this License to distribute the Executable version of the Covered Code to End Users in accordance with the terms of this License.

This License represents the complete agreement concerning subject matter hereof. If any provision of this License is held to be unenforceable, such provision shall not affect the enforceability of any other provision hereof."

In no event will the Initial Developer or any Contributor be liable for any direct, indirect, special, incidental or consequential damages (including damages for loss of profit or data, or for loss of use) to You, Your End Users, or any third party, either in tort or contract, arising out of, in connection with, or relating to this License, the Covered Code, or any contribution.

3. Reciprocal Obligations

3.1. You may distribute or publicly perform the Covered Code in Source Code form under the terms of this License.

3.2. You must include a copy of this License and the following notice in the Source Code and in any executable in a form identical to the notice in Exhibit A and in any in an Executable version of a Related Document in which You describe the origin of the Covered Code.

3.3. You must describe all Covered Code to which You contribute to contain a file documenting the changes You made to create that Covered Code and the date of any change. You must include a prominent statement that the Modification is derived, directly or indirectly, from Original Code provided by the Initial Developer and includes names of sufficient rights to grant the rights conveyed by this License.

3.4. You must make available at no charge, a copy of the notices described in Section 3.4 to each recipient of the Source Code as distributed by You.

3.5. Required Notices. You must duplicate the notice in Exhibit A in each file of the Source Code. If it is not possible to put such notice in a particular Source Code file due to its structure, then You must include a notice in such a location (a such recognizable location) where a user would be likely to look for it. For such a notice, if Your work consists of one or more Modifications, You may add your name as a Contributor to the notice described in Exhibit A. You must also duplicate this License in any documentation for the Source Code for which You describe recipients’ rights or ownership rights relating to Covered Code. You may choose to offer, and charge fee for, warranty, indemnity or support service relating to the Source Code, beyond the permissions granted for Covered Code, provided You retain all warranty, indemnity or support terms You offer. You may not remove or alter any copyright notices on the Source Code. You must make it absolutely clear that a recipient will know whom to contact. If Contributor obtains such knowledge after the Modification is made available as described in Section 3.2, Contributor shall promptly make the LEGAL file in all copies of Contributor’s Modifications to which such notice is applicable containing the notifying appropriate mailing list or mailing address reasonably calculated to inform those who received the Covered Code that new knowledge has been obtained.

3.6. Contributor API. If Contributor’s Modifications include an application programming interface and Contributor has knowledge of patent licenses which are reasonably necessary to implement that API, Contributor must also include this information in the LEGAL file.

3.7. Larger Works. You may create a Larger Work by combining Covered Code with other code governed by the terms of this License, and distribute the Larger Work as a whole, under the terms of this License, provided that you conspicuously display the notices described in Section 3.4 on the modified product.

3.8. Limitation on Liability. Notwithstanding any provision of this License to the contrary, this License and the rights granted hereunder will survive termination. In no event will the Initial Developer or any Contributor be liable for any direct, indirect, special, incidental or consequential damages (including damages for loss of profit or data, or for loss of use), to You, Your End Users, or any third party, either in tort or contract, arising out of, in connection with, or relating to this License, the Covered Code, or any contribution.

4. Legal Limitations

4.1. If You initiate litigation by asserting a patent infringement claim against Initial Developer or a Contributor (the Initial Developer or Contributor against whom You file such action is referred to as "Participant") alleging that:

(a) You or any distributor hereunder prior to termination shall survive termination.

(b) You may pass through to a third party the terms applicable to Covered Code created under this License, if the third party agrees to accept those terms and You do not change or alter those terms.

(c) You have the right to modify the terms applicable to Covered Code created under this License, if you do not change or alter those terms.

4.2. Effect of New Versions. Once Covered Code has been published under a particular version of the License, You may always continue to use the terms of that version for your software, and for the creation and distribution of Covered Code that You create or to which You contribute. Any Covered Code created under this License, and no Contributor has the right to modify the terms applicable to Covered Code created under this License.

5. If You distribute Modifications which You create or to which You contribute are governed by the terms of this License, including without limitation Section 3.2.

6. If You initiate litigation by asserting a patent infringement claim (excluding declaratory judgment actions) against Initial Developer or a Contributor (the Initial Developer or Contributor against whom You file such action is referred to as "Participant") alleging that:

(a) Your past and future use of Modifications made by such Participant, or (ii) withdraw Your litigation claim with respect to the Contributor Version against such Participant. If within 60 days of notice, a reasonable royalty and payment arrangement are not mutually agreed upon in writing by the parties or the litigation claim is not withdrawn, the rights granted by Participant to You under Sections 2.1 and 2.2 will be terminated immediately without notice.

(b) a modification which You create or to which You contribute must be made available in Source Code form under the terms of this License.

7. This License represents the complete agreement concerning subject matter hereof. If any provision of this License is held to be unenforceable, such provision shall not affect the enforceability of any other provision hereof."

9. Limitation of Liability.

UNDER NO CIRCUMSTANCES AND UNDER NO LEGAL THEORY: WHETHER TORT (INCLUDING NEGLIGENCE), CONTRACT, OR OTHERWISE, SHALL YOU, THE INITIAL DEVELOPER, ANY OTHER CONTRIBUTOR, OR ANY DISTRIBUTOR OF COVERED CODE, OR ANY SUPPLIER OF ANY SERVICES, BE LIABLE TO ANY PERSON FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES OF ANY CHARACTER INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOSS OF GOODWILL, WORK STOPPAGE, COMPUTER FAILURE OR MALFUNCTION, OR ANY OTHER COMMERCIAL DAMAGES OR LOSSES, EVEN IF YOU HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

IN NO EVENT WILL THE INITIAL DEVELOPER OR ANY OTHER CONTRIBUTOR BE LIABLE FOR ANY DIRECT, INDIRECT, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES (INCLUDING DAMAGES FOR LOSS OF PROFIT OR DATA, OR FOR LOSS OF USE) TO YOU, YOUR END USERS, OR ANY THIRD PARTY, EITHER IN TORT OR CONTRACT, ARISING OUT OF, IN CONNECTION WITH, OR RELATING TO THIS LICENSE, THE COVERED CODE, OR ANY CONTRIBUTION.

11. Miscellaneous

This License represents the complete agreement concerning subject matter hereof. If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable. This License shall be governed by California law (except to the extent applicable law, if any, requires otherwise) and to the extent such provisions shall not be valid, You shall be subject to the jurisdiction of the Courts of the Northern District of California, with venue lying in Santa Clara County, California, with the losing party responsible for costs, including without limitation, court costs and reasonable attorneys' fees and expenses. The application of the United Nations Convention on Contracts for the International Sale of Goods is expressly excluded. Any law or regulation which
provides that the language of a contract shall be construed against the drafter shall not apply to this License.

12. RESPONSIBILITY FOR CLAIMS.
As between Initial Developer and the Contributors, each party is responsible for claims and damages arising, directly or indirectly, out of its utilization of rights under this License and you agree to work with Initial Developer and Contributors to distribute such responsibility on an equitable basis. Nothing herein is intended or shall be deemed to constitute any admission of liability.

13. MULTIPLE-LICENSED CODE.
Initial Developer may designate portions of the Covered Code as Multiple-Licensed. Multiple-Licensed means that the Initial Developer permits you to use portions of the Covered Code under the terms of the MPL, or the alternative license, if any, specified by the Initial Developer in the file described in Exhibit A.

EXHIBIT A - Mozilla Public License.
The contents of this file are covered by the Mozilla Public License Version 1.1 ("the License"); you may not use this file except in compliance with the License. You may obtain a copy of the License at http://www.mozilla.org/MPL/. Software distributed under the License is distributed on an "AS IS" BASIS, WITHOUT WARRANTY OF ANY KIND, either express or implied. See the License for the specific language governing rights and limitations under the License.

The Original Code is ______________. Portions created by ______________ are Copyright (C) __________.
Contributor(s): ______________________________________.

Alternatively, the contents of this file may be used under the terms of the ______________ license (the [_____] License), in which case the provisions of [_____] License are applicable instead of those above. If you wish to allow use of your version of this file only under the terms of the [_____] License and not to allow others to use your version of this file under the MPL, indicate your decision by deleting the provisions above and replace them with the notice and other provisions required by the [_____] License. If you do not delete the provisions above, a recipient may use your version of this file under either the MPL or the [_____] License."

NOTE: The text of this Exhibit A may differ slightly from the text of the notices in the Source Code files of the Original Code. You should use the text of this Exhibit A rather than the text found in the Original Code Source Code for Your Modifications.

The Independent JPEG Group's JPEG Software

The software included in this product contains copyrighted software that is licensed under the JPEG License:

- JPEG License
  - Code project, Generating OpenGI, Bjipp

The distribution contains the sixth public release of the Independent JPEG Group's free JPEG software. You are welcome to redistribute this software and to use it for any purpose, subject to the conditions under LEGAL ISSUES, below.

Serious users of this software (particularly those incorporating it into larger programs) should contact US at jpeg-info@nPl.net to be added to our electronic mailing list. Mailing list members are notified of updates and have a chance to participate in technical discussions.

This software is the work of Tom Lane, Philip Gladstone, Jim Boucher, Lee Crocker, Julian Minguillon, Luis Ortiz, George Phillips, Davide Rossi, Guido Vollbeding, Ge' Wajers, and other members of the Independent JPEG Group.

UG is not affiliated with the official ISO JPEG standards committee.

LEGAL ISSUES

In plain English:
1. We don't promise that this software works. (But if you find any bugs, please let us know!)
2. You can use this software for whatever you want. You don't have to pay us.
3. You may not pretend that you wrote this software. If you use it in a program, you must acknowledge somewhere in your documentation that you've used the UG code.

In legalese:
Authors make NO WARRANTY or representation, either express or implied, with respect to this software, its quality, accuracy, merchantability, or fitness for a particular purpose. This software is provided "AS IS", and you, its user, assume the entire risk as to its quality and accuracy.

This software is copyright (C) 1991-1999, Thomas G. Lane. All Rights Reserved except as specified below.

Permission is hereby granted to use, copy, modify, and distribute this software (or portions thereof) for any purpose, without fee, subject to the following conditions:

1. Any part of the source code for this software is distributed, then this README file must be included, with this copyright and no-warranty notice unaltered, and any additions, deletions, or changes to the original source files must be clearly indicated in accompanying documentation.
2. If only executable code is distributed, then the accompanying documentation must state that this software is based on work in part of the Independent JPEG Group.
3. Permission for use of this software is granted only if the user accepts full responsibility for any undesirable consequences; the authors accept NO LIABILITY for damages of any kind.

These conditions apply to any software derived from or based on the UG code, not just to the unmodified library. If you use our work, you ought to acknowledge us.

Permission is NOT granted for the use of any UG author's name or company name in advertising or publicity relating to this software or products derived from it. This software may be referred to only as "the Independent JPEG Group's software."

We specifically permit and encourage the use of this software as the basis of commercial products, provided that all warranty or liability claims are assumed by the product vendor.

ansi2knr.c is included in this distribution by permission of L. Peter Deutsch, sole proprietor of its copyright holder, Aladdin Enterprises of Menlo Park, CA.
16. "Patch for Modification" means a difference, program, system, or the like in order to create the Modified Source Code from the Source Code or the Binary Code thereof.

17. "Vicarious Execution of Patch Processing" means vicarious execution service to create the Modified Source Code applying the Patch for Modification to the Source Code or the Binary Code thereof.

19. "Distribution" means any of the following acts:
   1. to transmit a work to a large number of specific persons through the Internet communication, broadcasting, and the like;
   2. to transmit a work to the general public through the Internet communication, broadcasting, and the like automatically in response to a request from the public; and
   3. to distribute a copy of a work to the general public or a large number of specific persons.

Article 3. Copyright

1. The copyrights of the Source Code shall be owned by Ken Sakamura.

Article 4. License of Source Code

1. As provided for in this Article, T-Engine Forum shall provide, and grant a license to use, the Source Code free of charge to any person who has taken the necessary procedure for registration as prescribed by T-Engine Forum and agreed to the T-License.

3. In accordance with the license granted under Article 4.1 above, the Source Code User may perform the following acts:
   1. to copy and/or modify the Source Code provided by T-Engine Forum hereunder for its own research, development and the like;
   2. to run the Source Code provided by T-Engine Forum hereunder for its own research, development and the like;
   3. to run the Source Code modified in accordance with the provision of Article 4.3 (1) above for its own research, development and the like;
   4. to distribute the Binary Code created from the Source Code provided by T-Engine Forum hereunder or from the Source Code modified in accordance with the provision of Article 4.3 (1) above;
   5. to issue and manufacture the Embedded Product containing the Binary Code, and, whether with or without payment, provide the End User with the same and make the Binary Code available to the End User on the Embedded Product.

5. The Source Code User and the System Developer shall be obligated to give a notice that the Source Code is used, in such a way as separately specified by T-Engine Forum, when they use the Source Code or the Binary Code, or make the Binary Code available for the End User on the Embedded Product.

Article 5. Distribution of Modified Source Code

1. Any of A- members of T-Engine Forum may become the Distributor of Modification by obtaining the approval of T-Engine Forum through the registration procedure as prescribed by the Forum provided that only the department of the A- member which has taken the registration procedure may distribute the Modified Source Code in such a way as provided for in this Article as long as it holds the Amembership.

2. The Distributor of Modification may create the Modified Source Code based on the Source Code provided by T-Engine Forum and the Patch for Modification to be applied to create such Modified Source Code from the Source Code.

3. The Distributor of Modification shall, prior to the distribution, inform T-Engine Forum of and register a name and description of the Modified Source Code in such a way as specified by T-Engine Forum.

4. The Distributor of Modification shall determine the name of the Modified Source Code subject to the rules separately established by T-Engine Forum and publish an appropriate notice as required by the rules on the Patch for Modification and the Modified Source Code.

5. The Distributor of Modification may distribute the Modified Source Code to a third party, whether with or without payment, provided that the Distributor of Modification shall take the necessary measures to prohibit the third party from making the re-Distribution of the Modified Source Code.

6. Developer with the Patch for Modification. Provided, however, that the Distributor of Modification shall be obligated to confirm that the System Developer is the Source Code User duly licensed under Article 4.1.

7. The Distributor of Modification may perform the Vicarious Execution of Patch Processing for the System Developer.

8. The System Developer shall not distribute the Modified Source Code in further modified form to any third party as a stand-alone software product.

9. The System Developer may, under the same obligation as imposed in Article 4.5, make the Embedded Product available for the End User through use of the Patch for Modification distributed by the Distributor of Modification or the Derivative Works obtained through the Vicarious Execution of Patch Processing.

Article 6. Distribution and Registration of the Ported Source Code

1. The Source Code User and the System Developer may, whether with or without charge, distribute to any third party only the following parts of the Ported Source Code on the T-Engine Hardware or the Similar Hardware to T-Engine Hardware:
   1. The Hardware-dependent Part and/or Compiler-dependent Part; provided that the Source Code User and the System Developer shall inform T-Engine Forum of, and T-Engine Forum may publish, a method for distributing said Part(s) to third parties.
   2. The Header File; provided that the Header File shall be distributed together with the Binary Code of the Ported Source Code.

2. Any member of T-Engine Forum may request T-Engine Forum to register and distribute, as an original source code for T-Kernel, the Ported Source Code on the T-Engine Hardware or the Similar Hardware to T-Engine Hardware.

3. Any member of T-Engine Forum who requests the distribution mentioned in the preceding paragraph shall accede to the following conditions:
   1. The member shall confirm that the object hardware is the T-Engine Hardware or the Similar Hardware to T-Engine Hardware.
   2. The member shall provide T-Engine Forum with a complete set of operational environment for the object hardware and T-Kernel free of charge when requesting the distribution.
   3. The member shall submit test results of the Ported Source Code to T-Engine Forum when requesting the distribution.

4. In the event that T-Engine Forum accepts the request mentioned in Article 6.2, T-Engine Forum shall register and distribute the Ported Source Code as the Source Code for T-Kernel. Provided, however, that the Ported Source Code may be treated in the same way as the Modified Source Code until the time of registration hereunder.

5. The provision set forth in Article 3 shall apply to the Ported Source Code registered in accordance with this Article.

Article 7. Use for Other Purpose

1. Any use of the Source Code, the Modified Source Code or the Ported Source Code other than those stipulated in Articles 4, 5 and 6 shall be subject to the prior approval of T-Engine Forum.

Article 8. Limited Warranty

1. T-Engine Forum and the copyright holder of the Source Code warrant that the Source Code does not infringe third party's copyrights. Provided, however, that T-Engine Forum and the copyright holder of the Source Code make no warranty as to the Hardware-dependent Part and/or Compiler-dependent Part set forth in Article 6.2 in the Ported Source Code by any third party.

3. Neither T-Engine Forum nor the copyright holder of the Source Code warrants that the Source Code does not infringe any third party's industrial property rights. In no event shall T-Engine Forum and the copyright holder of the Source Code be liable for any dispute which may arise between the Source Code User and a third party in connection with the third party's industrial property rights.

Article 9. Indemnity

1. Neither T-Engine Forum nor the copyright holder of the Source Code shall be liable for any damages (including, but not limited to, damages resulting from loss of profit, business interruption, loss of business information or any other pecuniary damage) arising out of use or impossibility of use of the Source Code even if T-Engine Forum and the copyright holder have been informed of the possibility of such damages.

Article 10. Breach of Agreement

1. In case that T-Engine Forum considers that this License Agreement is breached or that the popularization of T-Kernel is obstructed, T-Engine Forum shall take measures to correct such breach or such obstruction, take measures on the ground of copyright infringement, or take any other necessary measures against the breaching person or the obstructing person, regardless of whether or not the said person is a member of T-Engine Forum.

2. In case of breach of this License Agreement by a member of T-Engine Forum, T-Engine Forum may take appropriate measures against the member, for example, the member is disqualified from membership, depending on what kind of breach has been committed by it.

3. Any legal dispute which may arise in relation to any breach of this License Agreement shall be subject to the exclusive jurisdiction of the Tokyo District Court.

Article 11. Governing Law and Language

1. This License Agreement shall be governed by and interpreted under the laws of Japan.

2. This License Agreement is executed in both Japanese text and English text provided that the Japanese text shall govern the interpretation and performance of this License Agreement.

This marking on the product, accessories or literature indicates that the product and its electronic accessories (e.g. charger, headset, USB cable) should not be disposed of with other household waste at the end of their working life. To prevent possible harm to the environment or human health from uncontrolled waste disposal, please separate these items from other types of waste and recycle them responsibly to promote the sustainable reuse of material resources.

To protect natural resources and to promote material reuse, please separate batteries from other types of waste and recycle them through your local, free battery return system.

Hamwha Techwin cares for the environment at all product manufacturing stages, and is taking measures to provide customers with more environmentally friendly products. The Eco mark represents Hamwha Techwin’s devotion to creating environmentally friendly products, and indicates that the product satisfies the EU RoHS Directive.

Correct Disposal of This Product (Waste Electrical & Electronic Equipment)
(Applicable in the European Union and other European countries with separate collection systems)
This marking on the product, accessories or literature indicates that the product and its electronic accessories (e.g. charger, headset, USB cable) should not be disposed of with other household waste at the end of their working life. To prevent possible harm to the environment or human health from uncontrolled waste disposal, please separate these items from other types of waste and recycle them responsibly to promote the sustainable reuse of material resources.

Household users should contact either the retailer where they purchased this product, or their local government office, for details of where and how they can take these items for environmentally safe recycling.

Correct disposal of batteries in this product
(Applicable in the European Union and other European countries with separate battery return systems.)
This marking on the battery, manual or packaging indicates that the batteries in this product should not be disposed of with other household waste at the end of their working life. Where marked, the chemical symbols Hg, Cd or Pb indicate that the battery contains mercury, cadmium or lead above the reference levels in EC Directive 2006/66. If batteries are not properly disposed of, these substances can cause harm to human health or the environment. To protect natural resources and to promote material reuse, please separate batteries from other types of waste and recycle them through your local, free battery return system.
